Operating Instructions

AV Receiver sc-1228-k
WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

VENTILATION CAUTION
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 20 cm at top, 10 cm at rear, and 20 cm at each side).

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table-cloths, curtains) or by operating the equipment on thick carpet or a bed.

Operating Environment
Operating environment temperature and humidity:
+5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)

CAUTION
The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

CAUTION: TO PREVENT THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

IMPORTANT SAFETY INSTRUCTIONS
1) Read these instructions.
2) Keep these instructions.
3) Read all warnings.
4) Follow all instructions.
5) Do not use this apparatus near water.
6) Clean only with dry cloth.
7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11) Only use attachments/accessories specified by the manufacturer.
12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13) Unplug this apparatus during lightning storms or when unused for long periods of time.
14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
— Reorient or relocate the receiving antenna.
— Increase the separation between the equipment and receiver.
— Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
— Consult the dealer or an experienced radio/TV technician for help.

Caution
To prevent fire hazard, the Class 2 Wiring Cable should be used for connection with speaker, and should be routed away from hazards to avoid damage to the insulation of the cable.

WARNING: Handling the cord on this product or cords associated with accessories sold with the product may expose you to chemicals listed on Proposition 65 known to the State of California and other governmental entities to cause cancer and birth defect or other reproductive harm. Wash hands after handling.

Information to User
Alterations or modifications carried out without appropriate authorization may invalidate the user’s right to operate the equipment.

Wash hands after handling.
The Safety of Your Ears is in Your Hands
Get the most out of your equipment by playing it at a safe level – a level that lets the sound come through clearly without annoying blaring or distortion and, most importantly, without affecting your sensitive hearing. Sound can be deceiving. Over time, your hearing “comfort level” adapts to higher volumes of sound, so what sounds “normal” can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

ESTABLISH A SAFE LEVEL:
• Set your volume control at a low setting.
• Slowly increase the sound until you can hear it comfortably and clearly, without distortion.
• Once you have established a comfortable sound level, set the dial and leave it there.

BE SURE TO OBSERVE THE FOLLOWING GUIDELINES:
• Do not turn up the volume so high that you can’t hear what’s around you.
• Use caution or temporarily discontinue use in potentially hazardous situations.
• Do not use headphones while operating a motorized vehicle; the use of headphones may create a traffic hazard and is illegal in many areas.
Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly.

Flow of settings on the receiver

Flow for connecting and setting the receiver
The unit is a full-fledged AV receiver equipped with an abundance of functions and terminals. It can be used easily after following the procedure below to make the connections and settings.

Required setting item: 1, 2, 3, 4, 5, 7, 9
Setting to be made as necessary: 6, 8, 10, 11, 12

Important
The receiver’s initial settings can be made on the computer using Wiring Navi on the AVNavigator CD-ROM included with the receiver. In this case, virtually the same connections and settings as in steps 2, 3, 4, 5, 6, 7 and 8 can be made interactively. For instructions on using AVNavigator, see About using AVNavigator (included CD-ROM) on page 10.

1 Before you start
- Checking what’s in the box on page 8
- Loading the batteries on page 9

2 Determining the speakers’ application (page 20)
- 7.2 channel surround system (Front height)
- 7.2 channel surround system (Front wide)
- 7.2 channel surround system & Speaker B connection
- 5.2 channel surround system & Front Bi-amping connection (High quality surround)
- 5.2 channel surround system & ZONE 2 connection (Multi Zone)

3 Connecting the speakers
- Placing the speakers on page 21
- Connecting the speakers on page 22
- Installing your speaker system on page 22
- Bi-amping your speakers on page 23

4 Connecting the components
- About the audio connection on page 24
- About the video converter on page 25
- Connecting AM/FM antennas on page 31
- Connecting your TV and playback components on page 26

5 Power On

6 Changing the OSD display language (OSD Language) (page 41)

7 MCACC speaker settings
- Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38

8 The Input Setup menu (page 39)
(When using connections other than the recommended connections)

9 Basic playback (page 42)

10 Adjusting the sound and picture quality as desired
- Using the various listening modes (page 50)
- Better sound using Phase Control (page 53)
- Measuring the all EQ type (SYMMETRY/ALL CH ADJ/FRONT ALIGN) (page 79)
- Changing the channel level while listening (page 82)
- Switching on/off the Acoustic Calibration EQ, Auto Sound Retriever or Dialog Enhancement (page 65)
- Setting the PQLS function (page 69)
- Setting the Audio options (page 65)
- Setting the Video options (page 67)

11 Other optional adjustments and settings
- Control with HDMI function (page 60)
- The Advanced MCACC menu (page 78)
- The System Setup and Other Setup menus (page 85)

12 Making maximum use of the remote control
- Operating multiple receivers (page 73)
- Setting the remote to control other components (page 73)
Before you start

Checking what’s in the box

Please check that you’ve received the following supplied accessories:

- Setup microphone (cable: 5 m (16.4 ft.))
- Remote control unit
- AAA size IEC R03 dry cell batteries (to confirm system operation) x2
- AM loop antenna
- FM wire antenna
- Power cord
- CD-ROM (AVNavigator)
- Quick start guide
- Safety Brochure
- Warranty sheet

Our philosophy

Pioneer is dedicated to making your home theater listening experience as close as possible to the vision of the moviemakers and mastering engineer when they created the original soundtrack. We do this by focusing on three important steps:

1. Designing with carefully selected components so as to transmit the original soundtrack accurately
2. Allowing for customized acoustic calibration according to any listening area
3. Tuning that transmits soul

Features

- **Class D Amplifier**
  This unit is an AV receiver developed based on the latest high performance Class D amplifier and integrating the essence of Pioneer’s high sound quality designs. This new generation reference amplifier offers outstanding performance with high sound quality and reproduces the latest in multi-channel digital contents.

- **Auto Phase Control Plus**
  For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function automatically corrects for phase shifting on such discs and broadcast. This function is particularly effective when playing multi-channel music containing low frequency effects (LFE).

- **Hi-bit 24 Audio Processing**
  Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. 16- and 20-bit PCM as well as compressed audio is requantized to 24 bits, more subtle musical expression.

- **PQLS Bit-stream**
  Jitterless high quality playback is possible by connecting a PQLS-compatible player with HDMI connections. This feature is only available when the connected Pioneer Blu-ray Disc Player supporting the PQLS function.

- **dts Neo:X 7.1 compatible**
  This receiver supports the latest DTS format. The quality of Neo:X, originally designed for 9 channels or more, can be enjoyed in a 7-channel environment.

- **High Resolution Music Playback**
  High resolution music files with resolutions of 96 kHz/24 bit to 192 kHz/24 bit can be played. Playback of AIFF, Apple Lossless, WAV and FLAC files via the front USB port and network is supported.

- **DSD File Music Playback**
  Playback of high sound quality DSD music files is supported.

- **Energy Saving Design**
  This AV receiver has an ecological design. In addition to even lower power consumption in standby, the receiver is equipped with an “eco mode” for low power consumption when playing contents as well. Furthermore, the eco mode can be easily set using dedicated buttons on the main unit and remote control as well as from the application.

- **iControlAV2013 Remote Application**
  This is an application for smartphones and tablets allowing intuitive operation of many of the AV receiver’s functions. Versions are available for iPhone, iPod touch, iPad and Android devices. The application can be downloaded free of charge from the App Store or Google Play.

- **AVNavigator 2013**
  The CD-ROM (AVNavigator) included with this unit provides a variety of functions, such as Wiring Navi with a guide for connecting the unit and setting up from the computer and an Interactive Manual for operating the unit while reading the manual.

- **Apple AirPlay®**
  With AirPlay you can stream music from iTunes to the SC-1228-K and play it through your home theater system. You can even use the receiver to view metadata including song title, artist as well as album art on a connected display. With Pioneer’s AirPlay-compatible receivers, you can easily enjoy your iTunes music in any room in the house.

- **iPod Playback**
  Your iPod, iPhone or iPad can be connected to the receiver’s USB terminal and RCA video terminal to play the music/video files on the iPod, iPhone or iPad. Also, the iPod, iPhone or iPad is charged when it is connected to the receiver.

- **HDMI (3D, Audio Return Channel)**
  A compatible component is required to use the above function.

- **Ultra HD (with 4K video support) – Pass-through and upscaling –**
  4K resolution images can be passed through and displayed as such, and the Hi-Vision or Full Hi-Vision images of DVDs, Blu-ray discs and HD broadcasts can be upscaled to a resolution of up to 4K and displayed. A separate monitor supporting Ultra HD (4K video) is required.

- **HDZONE output**
  This receiver supports output of the HDMI output to a subzone room. Powerful images can be enjoyed simply by connected this receiver to a TV supporting 4K/Full-HD/3D. In addition, a multi-channel environment can be created by connecting this receiver to another AV receiver in the subzone room.

- **MHL™ (Mobile High-definition Link)-compatible device playback**
  An incorporates MHL 2 mobile device can be connected to enjoy 3D videos, Full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver.

- **HTC Connect**
  HTC Connect makes it easy to wirelessly stream your favorite music straight from your HTC phone. There’s no need for a separate app; HTC Connect is built right into your phone’s music player.
Before you start

- Dolby Pro Logic llz compatible
  Adding a pair of speakers above the front left and right speakers adds expressiveness in the vertical direction to the previous horizontally-oriented sound field. The height channel strengthens the sound field’s sense of three-dimensionality and air, producing presence and expansion.
- Virtual Speakers
  By turning on “Virtual Surround Back”, “Virtual Height”, and “Virtual Wide” modes realize a maximum of 11.2 channels combining the actually installed speakers and the virtual speakers is possible. This makes for smoother connection between the sounds and an improved 3D feel.
- Auto Sound Retriever
  The Auto Sound Retriever feature employs DSP technology to restore sound pressure and smooth jagged artifacts left over after compression.
- Sound Retriever Link
  By connecting a Pioneer player supporting the Sound Retriever Link function, compressed audio files played on the player can be corrected automatically to play the sound with higher density. This feature is only available when the connected Pioneer Blu-ray Disc Player supporting the PQLS function.
- Stream Smoother Link
  By connecting a Pioneer player supporting the Stream Smoother Link function, compressed video or movie files played on the player can be corrected automatically to play them with a more natural, easily viewable picture. This feature is only available when the connected Pioneer Blu-ray Disc Player supporting the PQLS function.
- Internet Radio
  By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations.
- Bluetooth compatible
  Using the Bluetooth ADAPTER (AS-BT100 or AS-BT200) lets you enjoy music files on an iPhone or other Bluetooth wireless technology device wirelessly.
- Easy setup using Advanced MCACC
  The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.

Installing the receiver
- When installing this unit, make sure to put it on a level and stable surface.
- Don’t install it on the following places:
  — on a color TV (the screen may distort)
  — near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
  — in direct sunlight
  — in damp or wet areas
  — in extremely hot or cold areas
  — in places where there is vibration or other movement
  — in places that are very dusty
  — in places that have hot fumes or oils (such as a kitchen)
- Do not touch this receiver’s bottom panel while the power is on or just after it is turned off. The bottom panel becomes hot when the power is on (or right after it is turned off) and could cause burns.

Loading the batteries
The batteries included with the unit are to check initial operations; they may not last over a long period. We recommend using alkaline batteries that have a longer life.

***WARNING***
- Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

***CAUTION***
Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:
- Never use new and old batteries together.
- Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
- When inserting the batteries, make sure not to damage the springs on the battery’s (−) terminals. This can cause batteries to leak or overheat.
- Batteries with the same shape may have different voltages. Do not use different batteries together.
- When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country/area.

Operating range of remote control unit
The remote control may not work properly if:
- There are obstacles between the remote control and the receiver’s remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.
About using AVNavigator (included CD-ROM)

The included AVNavigator CD-ROM contains Wiring Navi allowing you to easily make the receiver’s connections and initial settings in dialog fashion. High precision initial settings can be completed easily simply by following the instructions on the screen to make the connections and settings. There are also other features enabling easy use of various functions, including an Interactive Manual that operates in association with the receiver, updating of various types of software, and MCACC Application that lets you check the MCACC measurement results on 3D graphs.

- The iPad version of AVNavigator can be downloaded from the App Store.
- The provided CD-ROM includes the Windows version of AVNavigator.

Installing AVNavigator for Windows

1. Launch the desktop from the start screen (for Windows 8 only).
2. Load the included CD-ROM into your computer’s CD drive.
   - A screen for selecting the CD-ROM’s operation (“Open with Explorer”, “Launch ‘MAIN_MENU.exe’”, etc.) may be displayed. When the operation for launching “MAIN_MENU.exe” is performed, the AVNavigator menu appears. A caution regarding security may appear during this operation, but there is no security problem, so continue the operation.
   - If the CD-ROM’s top menu screen is not displayed, double-click “MAIN_MENU.exe” on the CD-ROM. When this is done, a caution regarding security is displayed, but there is no security problem, so continue the operation.
3. Click “AVNavigator” on the “Installing Software” menu.
4. Follow the instructions on the screen to install.
   - When “Finish” is selected, installation is completed.
5. Remove the included CD-ROM from the computer’s CD drive.

Handling the CD-ROM

Operating Environment
- AVNavigator can be used with Microsoft® Windows® XP/Windows Vista®/Windows® 7/Windows® 8.
- A browser is at times used for AVNavigator functions. The supported browser is Microsoft Internet Explorer 8, 9 or 10.
- Adobe® Flash® Player 10 must be installed to use some of the functions in AVNavigator.

Precautions For Use
- This CD-ROM is for use with a personal computer. It cannot be used with a DVD player or music CD player. Attempting to play this CD-ROM with a DVD player or music CD player can damage speakers or cause impaired hearing due to the large volume.

License
- Please agree to the “Terms of Use” indicated below before using this CD-ROM. Do not use if you are unwilling to consent to the terms of its use.

Terms of Use
- Copyright to data provided on this CD-ROM belongs to PIONEER CORPORATION. Unauthorized transfer, duplication, broadcast, public transmission, translation, sales, lending or other such matters that go beyond the scope of “personal use” or “citation” as defined by Copyright Law may be subject to punitive actions. Permission to use this CD-ROM is granted under license by PIONEER CORPORATION.

General Disclaimer
- PIONEER CORPORATION does not guarantee the operation of this CD-ROM with respect to personal computers using any of the applicable OS. In addition, PIONEER CORPORATION is not liable for any damages incurred as a result of use of this CD-ROM and is not responsible for any compensation. The names of private corporations, products and other entities described herein are the registered trademarks or trademarks of their respective firms.

Using AVNavigator for Windows

1. Click [AVNavigator 2013.II] on the desktop to launch AVNavigator.
2. Select and use the desired function.
   - AVNavigator includes the following functions:
   - Wiring Navi – Guides you through connections and initial settings in dialog fashion. High precision initial settings can be made easily.
   - Operation Guide – Describes the receiver’s playback operations and how to use several functions through videos and illustrations.
   - Interactive Manual – Automatically displays the pages explaining the functions that have been operated on the receiver. It is also possible to operate the receiver from the Interactive Manual.
   - Glossary – Displays glossary pages.
   - MCACC Appli – Displays Advanced MCACC measurement results vividly on the computer. There are special operating instructions for MCACC Application. These instructions are included in the AVNavigator Interactive Manual’s menus. Refer to them when using MCACC Application.
   - Software Update – Allows various types of software to be updated.
   - Settings – Used to make various AVNavigator settings.
   - Detection – Used to detect the receiver. Press Detection before using the Interactive Manual.
   - MCACC Appli and Software Update to connect the receiver to the network.

Deleting the AVNavigator

You can use the following method to uninstall (delete) the AVNavigator from your PC.

- From the Start menu, click “Program” → “PIONEER CORPORATION” → “AVNavigator 2013.II” → “Uninstall AVNavigator 2013.II”.

Installing AVNavigator for Mac

2. Launch “AVNavigator 2013.pkg” from the “Downloads” folder.
3. Follow the instructions on the screen to install.

Operating Environment
- AVNavigator for Mac can be used with Mac OS X (10.7 or 10.8).
- A browser is at times used for AVNavigator for Mac functions. The supported browser is Safari 6.0.
Using AVNavigator for Mac

1. Launch “AVNavigator 2013”.
The file is located in the “Applications” folder just under the hard disk (Macintosh HD).

2. Select and use the desired function.
For details, see Using AVNavigator for Windows on page 10. The Mac OS version includes the same types of functions.

Deleting the AVNavigator
You can use the following method to uninstall (delete) the AVNavigator from your Mac.

1. Delete “AVNavigator 2013”.
The file is located in the “Applications” folder just under the hard disk (Macintosh HD).

2. Delete the “jp.co.pioneer.AVNavigator 2013” folder.
The folder is located in the hard disk (Macintosh HD) → “Library” folder → “Application Support” folder.
Controls and displays

Remote control ................................................................. 13
Display ........................................................................... 15
Front panel .................................................................... 16
The remote has been conveniently color-coded according to component control using the following system:

- **White** – Receiver control, TV control
- **Blue** – Other controls (See pages 44, 45, 47, 48 and 76.)

1. **STANDBY/ON**
   This switches between standby and on for this receiver.

2. **ALL ZONE STBY DISCRETE ON**
   Use this button to perform unique operations (page 78).

3. **RCU SETUP**
   Use to input the preset code when making remote control settings and to set the remote control mode (page 73).

4. **Input function buttons**
   Press to select control of other components (page 73).
   Use **INPUT SELECT →/←** to select the input function (page 43).

5. **Receiver Control buttons**
   Press **RECEIVER** first to access:
   - **STATUS** – Press to check selected receiver settings (page 70).
   - **AUTO/ALC/DIRECT** – Switches between Auto Surround (page 51), Auto Level Control mode and Stream Direct mode (page 57).
   - **STANDARD** – Press for Standard decoding and to switch various modes (Pro Logic, Neo:X, etc.) (page 51).
   - **ADV SURR** – Use to switch between the various surround modes (page 50).
   - **SIGNAL SEL** – Use to select an input signal (page 53).
   - **MCACC** – Press to switch between MCACC presets (page 53).
   - **CH LEVEL** – Press repeatedly to select a channel, then use **↑/↓** to adjust the level (pages 43 and 67).
   - **AUTO S.RTRV** – Press to restore CD quality sound to compressed audio sources (page 66).
   - **SPEAKERS** – Use to switch the setting of the Auto Phase Control Plus function (page 66).
   - **DIMMER** – Dims or brightens the display (page 70).
   - **SLEEP** – Use to put the receiver in sleep mode and select the amount of time before sleep (page 70).
   - **HDMI OUT** – Switch the HDMI output terminal (page 70).

6. **TV CONTROL buttons**
   These buttons can be used to perform operations on the TV to which the **TV CONTROL INPUT** button is assigned.
   The TV can be operated with these buttons regardless of the input set for the remote control’s operation mode (page 73).

7. **Receiver setting buttons**
   Press **RECEIVER** first to access:
   - **AUDIO PARAMETER** – Use to access the Audio options (page 65).
   - **VIDEO PARAMETER** – Use to access the Video options (page 61).
   - **HOME MENU** – Use to access the Home Menu (pages 39, 41, 61, 71 and 80).
   - **RETURN** – Press to confirm and exit the current menu screen.

8. **↑/↓/←/→/ENTER**
   Use the arrow buttons when setting up your surround sound system (see page 70) and the Audio or Video options (page 65 or 67).

9. **FEATURES buttons**
   These let you operate the receiver’s features directly.
   - **PHASE** – Press to switch on/off Phase Control (page 53).
   - **P.CTRL+** – Use to switch the setting of the Auto Phase Control Plus function (page 66).
   - **PQLS** – Press to select the PQLS setting (page 62).
   - **ECO** – Use to switch the eco mode type (page 62).
10 MULTI-ZONE select buttons
Switch to perform operations in ZONE 2 and HDZONE (page 69).
- The ZONE 3 button is not used with this unit.

11 Remote control LED
Lights when a command is sent from the remote control.

12 RECEIVER
Switches the remote to control the receiver (used to select the white commands).
Switch to perform operations in the main zone.
Also use this button to set up surround sound.

13 VOLUME +/-
Use to set the listening volume.

14 MUTE
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).

15 OPTION
The preset codes of desired devices can be registered in the remote control and button operations can be registered using the learning mode.
1 Signal indicators
Light to indicate the currently selected input signal. **AUTO** lights when the receiver is set to select the input signal automatically (page 53).

2 Program format indicators
Light to indicate the channels to which digital signals are being input.
- **L/R** – Left front/Right front channel
- **C** – Center channel
- **SL/SSR** – Left surround/Right surround channel
- **LFE** – Low frequency effects channel (the () indicators light when an LFE signal is being input)
- **X** – Either one channel other than the ones above, the mono surround channel or matrix encode flag

3 Digital format indicators
Light when a signal encoded in the corresponding format is detected.
- **DIGITAL** – Lights with Dolby Digital decoding.
- **DIGITAL PLUS** – Lights with Dolby Digital Plus decoding.
- **TrueHD** – Lights with Dolby TrueHD decoding.
- **DTS** – Lights with DTS decoding.
- **DTS HD** – Lights with DTS-HD decoding.
- **96/24** – Lights with DTS 96/24 decoding.
- **DSD** – Lights when an SACD or a file’s DSD signals are playing.
- **PCM** – Lights during playback of PCM signals.
- **MSTR** – Lights during playback of DTS-HD Master Audio signals.

4 MULTI-ZONE
Lights when the MULTI-ZONE feature is active (page 60).

5 SOUND
Lights when the **DIGITAL** (Dialog Enhancement) or **TONE** (tone controls) features is selected (page 65).

6 POLS
Lights when the PQLS feature is active (page 62).

7 S.RTRV
Lights when the Auto Sound Retriever function is active (page 63).

8 Listening mode indicators
- **AUTO SURROUND** – Lights when the Auto Surround feature is switched on (page 51).
- **ALC** – Lights when the ALC (Auto level control) mode is selected (page 51).
- **STREAM DIRECT** – Lights when Direct/Pure Direct is selected (page 50).
- **ADV.SURROUND** – Lights when one of the Advanced Surround modes has been selected (page 52).
- **STANDARD** – Lights when one of the Standard Surround modes is switched on (page 51).

9 **PHASE CONTROL**
Lights when the Phase Control is switched on (page 53).

10 ATT
Lights when the input signal level is lowered to reduce distortion (page 65).

11 OVER
Lights when excessive analog signals are being input.

12 Tuner indicators
- **TUNED** – Lights when a broadcast is being received.
- **STEREO** – Lights when a stereo FM broadcast is being received in auto stereo mode.
- **MONO** – Lights when the mono mode is set using MPX.

13
Lights when the sound is muted.

14 Master volume level
Shows the overall volume level.
“- -” indicates the minimum level, and “+12dB” indicates the maximum level.

15 Input function indicators
Light to indicate the input function you have selected.

16 Scroll indicators
Light when there are more selectable items when making the various settings.

17 Speaker indicators
Lights to indicate the current speaker system using SPEAKERS (page 69).

18 SLEEP
Lights when the receiver is in sleep mode (page 70).

19 Matrix decoding format indicators
- **PRO LOGIC II** – This lights to indicate **PRO LOGIC II** decoding (page 51).
- **PRO LOGIC IIx** – This lights to indicate **PRO LOGIC IIx** decoding (page 51).

20 Character display
Displays various system information.

21 Remote control mode indicator
Lights to indicate the receiver’s remote control mode setting. (Not displayed when set to 1.) (page 90)
### Controls and displays

#### Front panel

1. **STANDBY/ON**
   - This switches between standby and on for this receiver.

2. **INPUT SELECTOR dial**
   - Use to select an input function.

3. **Indicators**
   - **ADVANCED MCACC** – Lights when EQ is set to ON in the AUDIO PARAMETER menu (page 60).
   - **FL OFF** – Lights when “off” (nothing displayed) is selected with the display’s dimmer adjustment (page 70).
   - **HDMI** – Blinks when connecting an HDMI-equipped component; lights when the component is connected (page 26).
   - **iPod iPhone iPad** – Lights to indicate iPod/iPhone/iPad is connected (page 34).

4. **Character display**
   - See Display on page 55.

5. **Remote sensor**
   - Receives the signals from the remote control (page 9).

6. **MASTER VOLUME dial**

7. **Front panel controls**
   - To access the front panel controls, catch the sides of the door with your fingers and pull forward.

8. **AUDIO PARAMETER**
   - Use to access the Audio options (page 60).

9. **TUNE/PRESET** / ENTER
   - Use the arrow buttons when setting up your Home Menu. Use TUNE † ‡ to find radio frequencies and use PRESET † ‡ to find preset stations (page 47).

10. **VIDEO PARAMETER**
    - Use to access the Video options (page 67).

11. **MULTI-ZONE controls**
    - If you’ve made MULTI-ZONE connections (page 32) use these controls to control the sub zone from the main zone (page 69).

12. **SPEAKERS**
    - Use to change the speaker terminal (page 69).

13. **iPod iPhone iPad DIRECT CONTROL**
    - Change the receiver’s input to the iPod and enable iPod operations on the iPod (page 44).

14. **Listening mode buttons**
    - **AUTO SURR/ALC/STREAM DIRECT** – Switches between Auto Surround (page 51), Auto Level Control and Stream Direct mode (page 52).
    - **ECO** – Use to switch the eco mode type (page 52).

15. **TUNER controls**
    - **BAND** – Switches between AM and FM radio bands (page 47).
    - **TUNER EDIT** – Use with TUNE † ‡ , PRESET † ‡ and ENTER to memorize and name stations for recall (page 47).

16. **HOME MENU**
    - Use to access the Home Menu (pages 41, 40, 61, 79 and 86).

17. **RETURN**
    - Press to confirm and exit the current menu screen.

18. **PHASE CONTROL**
    - Press to switch on/off Phase Control (page 53).

19. **PHONES jack**
    - Use to connect headphones. When the headphones are connected, there is no sound output from the speakers.

20. **MCACC SETUP MIC jack**
    - Use to connect the supplied microphone (page 38).
21 iPod/iPhone/iPad terminals
Use to connect your Apple iPod/iPhone/iPad as an audio and video source (page 34), or connect a USB device for audio and photo playback (page 35).

22 HDMI input/MHL connector
Use for connection to a compatible HDMI device (Video camera, etc.) (page 35).
An MHL-compatible mobile device can also be connected here using the MHL cable (page 35).

Connecting your equipment

This receiver provides you with many connection possibilities, but it doesn’t have to be difficult. This chapter explains the kinds of components you can connect to make up your home theater system.

CAUTION

- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
- When making connections, also keep the power cords of the devices being connected unplugged from the power outlets.
- Depending on the device being connected (amplifier, receiver, etc.), the methods of connection and terminal names may differ from the explanations in this manual. Also refer to the operating instructions of the respective devices.

Rear panel

![Rear panel diagram]

Note

The input functions below are assigned by default to the receiver's different input terminals. Refer to The Input Setup menu on page 39 to change the assignments if other connections are used.

Determining the speakers’ application

This unit permits you to build various surround systems, in accordance with the number of speakers you have.

- Be sure to connect speakers to the front left and right channels (L and R).
- It is also possible to only connect one of the surround back speakers (SB) or neither.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal.

Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Choose one from Plans [A] to [E] below.

![Important]

- The Speaker System setting must be made if you use any of the connections shown below other than [A] (see Speaker system setting on page 86).
- Sound does not come through simultaneously from the front height, front wide, speaker B and surround back speakers. Output speakers are different depending on the input signal or listening mode.

[A] 7.2 channel surround system (Front height)

- Default setting
- Speaker System setting: Normal(SB/FH)

![diagram]

A 7.2 channel surround system connects the left and right front speakers (L/R), the center speaker (C), the left and right front height speakers (FHL/FHR), the left and right front wide speakers (FWL/FWR), the left and right surround speakers (SL/SR), the left and right surround back speakers (SBL/SBR), and the subwoofers (SW 1/SW 2).

It is not possible to produce sound simultaneously from the front height speakers and the surround back speakers.

This surround system produces a more true-to-life sound from above.

[B] 7.2 channel surround system (Front wide)

- Speaker System setting: Normal(SB/FW)

![diagram]

This plan replaces the left and right front height speakers shown in [A] with the left and right front wide speakers (FWL/FWR).

It is not possible to produce sound simultaneously from the front wide speakers and the surround back speakers.

This surround system provides a sound field with good association between the sounds of the different channels.

[C] 7.2 channel surround system & Speaker B connection

- Speaker System setting: Speaker B

![diagram]

With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback of the same sound on the B speakers. The same connections also allow for 7.2-channel surround sound in the main zone when not using the B speakers.
Connecting your equipment

[D] 5.2 channel surround system & Front Bi-amping connection (High quality surround)

- Speaker System setting: Front Bi-Amp
  Bi-amping connection of the front speakers for high sound quality with 5.2-channel surround sound.

[E] 5.2 channel surround system & ZONE 2 connection (Multi Zone)

- Speaker System setting: ZONE 2
  With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback on another component in ZONE 2. (The selection of input devices is limited.)

Other speaker connections

- Your favorite speaker connections can be selected even if you have fewer than 5.2 speakers (except front left/right speakers).
- When not connecting a subwoofer, connect speakers with low frequency reproduction capabilities to the front channel. (The subwoofer's low frequency component is played from the front speakers, so the speakers could be damaged.)
- After connecting, be sure to conduct the Full Auto MCACC (speaker environment setting) procedure. See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38.

Placing the speakers

Refer to the chart below for placement of the speakers you intend to connect.

- Place the surround speakers at 120° from the center. If you, (1) use the surround back speaker, and, (2) don’t use the front height speakers/front wide speakers, we recommend placing the surround speaker right beside you.
- If you intend to connect only one surround back speaker, place it directly behind you.
- Place the left and right front height speakers at least one meter (3.3 ft.) directly above the left and right front speakers.

Some tips for improving sound quality

Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.

- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.
- For the best stereo effect, place the front speakers 2 m to 3 m (6 ft. to 9 ft.) apart, at equal distance from the TV.
- If you’re going to place speakers around your CRT TV, use shielded speakers or place the speakers at a sufficient distance from your CRT TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround and surround back speakers should be positioned 60 cm to 90 cm (2 ft. to 3 ft.) higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.
- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.
Connecting the speakers

Each speaker connection on the receiver comprises a positive (+) and negative (–) terminal. Make sure to match these up with the terminals on the speakers themselves.

This unit supports speakers with a nominal impedance of 4 Ω to 16 Ω.

**CAUTION**
- These speaker terminals carry HAZARDOUS LIVE voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.

**Bare wire connections**

**CAUTION**
Make sure that all speakers are securely installed. This not only improves sound quality, but also reduces the risk of damage or injury resulting from speakers being knocked over or falling in the event of external shocks such as earthquakes.

1. Twist exposed wire strands together.
2. Loosen terminal and insert exposed wire.
3. Tighten terminal.

**Notes**
- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

**Banana plug connections**

If you want to use speaker cables terminated with banana plugs, screw the speaker terminal fully shut, then plug the banana plug into the end of the speaker terminal.

Installing your speaker system

At the very least, front left and right speakers only are necessary. Note that your main surround speakers should always be connected as a pair, but you can connect just one surround back speaker if you like (it must be connected to the left surround back terminal).

**Standard surround connection**

The front height terminals can also be used for the front wide and Speaker B speakers.

- **Front height setting**
  - Front height right
  - Front height left
- **Front wide setting**
  - Front wide right
  - Front wide left
- **Speaker B setting**
  - Speaker B - right
  - Speaker B - left

The surround back terminals can also be used for ZONE 2.

- **Surround right**
  - Not connected
  - 5.5 ch surround setting
  - Not connected
  - 6.2 ch surround setting
  - Not connected
  - 7.2 ch surround setting
  - Surround back right
  - Surround back left
  - ZONE 2 setting
  - ZONE 2 - Right
  - ZONE 2 - Left
Bi-amping your speakers
Bi-amping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you’re using.

Bi-wiring your speakers
Your speakers can also be bi-wired if they support bi-amping.

- With these connections, the Speaker System setting makes no difference.

\[ \text{CAUTION} \]
- Don’t connect different speakers from the same terminal in this way.
- When bi-wiring as well, heed the cautions for bi-amping shown above.
- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver. Using a banana plug for the second connection is recommended.

\[ \text{CAUTION} \]
- Most speakers with both High and Low terminals have two metal plates that connect the High to the Low terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.
- If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.
Connecting your equipment

Selecting the Speaker system

The front height terminals can be used for front wide and Speaker B connections, in addition to for the front height speakers. Also, the surround back terminals can be used for bi-amping and ZONE 2 connections, in addition to for the surround back speakers. Make this setting according to the application.

Front height setup

*Default setting

1. Connect a pair of speakers to the front height speaker terminals.
   See Standard surround connection on page 22.
2. If necessary, select ‘Normal(SB/FH)’ from the Speaker System menu.
   See Speaker system setting on page 86 to do this.

Front wide setup

1. Connect a pair of speakers to the front height speaker terminals.
   See Standard surround connection on page 22.
2. Select ‘Normal(SB/FW)’ from the Speaker System menu.
   See Speaker system setting on page 86 to do this.

Speaker B setup

You can listen to stereo playback in another room.

1. Connect a pair of speakers to the front height speaker terminals.
   See Standard surround connection on page 22.
2. Select ‘Speaker B’ from the Speaker System menu.
   See Speaker system setting on page 86 to do this.

Bi-Amping setup

Bi-amping connection of the front speakers for high sound quality with 5.1-channel surround sound.

1. Connect bi-amp compatible speakers to the front and surround back speaker terminals.
   See Bi-amping your speakers on page 23.
2. Select ‘Front Bi-Amp’ from the Speaker System menu.
   See Speaker system setting on page 86 to do this.

ZONE 2 setup

With these connections you can simultaneously enjoy 5.1-channel surround sound in the main zone with stereo playback on another component in ZONE 2.

1. Connect a pair of speakers to the surround back speaker terminals.
   See Standard surround connection on page 22.
2. Select ‘ZONE 2’ from the Speaker System menu.
   See Speaker system setting on page 86 to do this.

• With an HDMI cable, video and audio signals can be transferred in high quality over a single cable.
Connecting your equipment

About the video converter

The video converter ensures that all video sources are output through the HDMI OUT terminal. If the TV is only connected to the receiver's composite VIDEO MONITOR OUT jacks, all the other video devices must be connected through composite connections.

If several video components are assigned to the same input function (see The Input Setup menu on page 39), the converter gives priority to HDMI, component, then composite (in that order).

Terminal for connection with source device

Terminal for connection with TV monitor

Notes
- The only exception is HDMI: since this resolution cannot be downscaled, you must connect your monitor/TV to the receiver's HDMI output when connecting this video source.
- If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, try switching Digital Video Conversion (in Setting the Video options on page 67) OFF.
- The signal input resolutions that can be converted from the component video input for the HDMI output are 480i/576i, 480p/576p, 720p and 1080i. 1080p signals cannot be converted.

About HDMI

The HDMI connection transfers uncompressed digital video, as well as almost every kind of digital audio. This receiver incorporates High-Definition Multimedia Interface (HDMI™) technology.

This receiver supports the functions described below through HDMI connections.
- Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
- 3D signal transfer
- Deep Color signal transfer
- x.v.Color signal transfer
- ARC (Audio Return Channel)
- 4K signal transfer
- This may not operate properly, depending on the connected equipment.
- — 4K 24p, 4K 25p and 4K 30p signals are supported.
- Input of multi-channel linear PCM digital audio signals (192 kHz or less) for up to 8 channels
- Input of the following digital audio formats:
  - Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio, DTS-HD High Resolution Audio), CD, SACD (DSD signal)
  - Synchronized operation with components using the Control with HDMI function on page 60

Notes
- An HDMI connection can only be made with DVI-equipped components compatible with both DVI and High Bandwidth Digital Content Protection (HDCP). If you choose to connect to a DVI connector, you will need a separate adaptor (DVI — HDMI) to do so. A DVI connection, however, does not support audio signals. Consult your local audio dealer for more information.
- If you connect a component that is not compatible with HDCP, an HDCP ERROR message is displayed on the front panel display. Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video this is not a malfunction.
- Depending on the component you have connected, using a DVI connection may result in unreliable signal transfers.
- This receiver supports SACD, Dolby Digital Plus, Dolby TrueHD and DTS-HD Master Audio. To take advantage of these formats, however, make sure that the component connected to this receiver also supports the corresponding format.
- Use a High Speed HDMI™ cable. If an HDMI cable other than a High Speed HDMI™ cable is used, it may not work properly.
- When an HDMI cable with a built-in equalizer is connected, it may not operate properly.
- Signal transfer is only possible when connected to a compatible component.
- HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
- Turning on/off the device connected to this unit's HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

x.v.Color® and x.v.Color are trademarks of Sony Corporation.
Connecting your TV and playback components

Connecting using HDMI

If you have an HDMI or DVI (with HDCP) equipped component (Blu-ray Disc player (BD), etc.), you can connect it to this receiver using a commercially available HDMI cable. If the TV and playback components support the Control with HDMI feature, the convenient Control with HDMI functions can be used (see Control with HDMI function on page 60).

- When connecting to an HDMI/DVI-compatible monitor using the HDMI OUT 2 terminal, switch the HDMI output setting to OUT 2 or OUT 1+2. See Switching the HDMI output on page 70. Also, MAIN/HDZONE must be set to MAIN beforehand (page 91).
- For input components, connections other than HDMI connections are also possible (see Connecting your DVD player with no HDMI output on page 27).
- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables.
  - When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 61). After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
  - If you use a coaxial digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital or analog audio input you connected the TV to (see The Input Setup menu on page 39).
- Please refer to the TV’s operation manual for directions on connections and setup for the TV.
Connecting your DVD player with no HDMI output

This diagram shows connections of a TV (with HDMI input) and DVD player (or other playback component with no HDMI output) to the receiver.

- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 26).
- When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 61).
- If you use an optical digital audio cable or RCA (analog) audio cable, you'll need to tell the receiver which digital input you connected the player to (see The Input Setup menu on page 39).

Connecting your TV with no HDMI input

This diagram shows connections of a TV (with no HDMI input) and DVD player (or other playback component) to the receiver.

⚠️ Important

- With these connections, the picture is not output to the TV even if the DVD player is connected with an HDMI cable. Connect the receiver and TV using the same type of video cable as used to connect the receiver and player.
- Also, when the receiver and TV are connected by anything other than an HDMI cable, the OSD function allowing display of the receiver’s settings, operations, etc., on the TV’s screen cannot be used. In this case, watch the receiver’s front panel display while performing the various operations and making settings.
Connecting your equipment

In order to listening to HD audio with this receiver, connect an HDMI cable, and use analog video cable for video signal input. Depending on the player, it may not be possible to output video signals to both HDMI and other video output (composite, etc.) simultaneously, and it may be necessary to make video output settings. Please refer to the operating instructions supplied with your player for more information.

- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 26).
- If you use an optical digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the player to (see The Input Setup menu on page 39).

Connecting an HDD/DVD recorder, BD recorder and other video sources

This receiver has audio/video inputs suitable for connecting analog or digital video devices, including HDD/DVD recorders and BD recorders. When you set up the receiver you’ll need to tell the receiver which input you connected the recorder to (see also The Input Setup menu on page 39).

- If your HDD/DVD recorder, BD recorder, etc., is equipped with an HDMI output terminal, we recommend connecting it to the receiver’s HDMI DVR/BDR IN terminal. When doing so, also connect the receiver and TV by HDMI (see Connecting using HDMI on page 26).
Connecting a satellite/cable receiver or other set-top box

Satellite and cable receivers, and terrestrial digital TV tuners are all examples of so-called ‘set-top boxes’. When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Setup menu on page 39).

- If your set-top box is equipped with an HDMI output terminal, we recommend connecting it to the receiver’s HDMI SAT/CBL IN terminal. When doing so, also connect the receiver and TV by HDMI (see Connecting using HDMI on page 26).

- Even if your set-top box is equipped with an HDMI output terminal, in some cases the sound is output from the digital audio output (optical or coaxial) and only the video is output from the HDMI output terminal. In this case, make the HDMI and digital audio connections as shown below.

---

If you use a digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the set-top box to (see The Input Setup menu on page 39).
Connecting other audio components

This receiver has both digital and analog inputs, allowing you to connect audio components for playback. When you set up the receiver you’ll need to tell the receiver which input you connected the component to (see also The Input Setup menu on page 39).

- If your turntable has line-level outputs (i.e., it has a built-in phono pre-amp), connect it to the ANALOG IN 1 (CD) inputs instead.

Connecting additional amplifiers

This receiver has more than enough power for any home use, but it’s possible to add additional amplifiers to front and subwoofer channels of your system using the pre-outs. Make the connections shown below to add amplifiers to power your speakers.

- If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 83) to LARGE.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.
- To hear sound only from the pre-outs, switch the speaker terminals to SP: OFF (page 69) or simply disconnect any speakers that are connected directly to the receiver.
**Connecting AM/FM antennas**

Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Connecting external antennas on page 31).

1. Pull off the protective shields of both AM antenna wires.
2. Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3. Fix the AM loop antenna to the attached stand.
   - To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
   - If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4. Place the AM antenna on a flat surface and in a direction giving the best reception.
5. Connect the FM wire antenna into the FM antenna socket.
   - For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.

**Connecting external antennas**

To improve FM reception, connect an external FM antenna to FM UNBAL 75 Ω.

To improve AM reception, connect a 5 m to 6 m (16 ft. to 20 ft.) length of vinyl-coated wire to the AM LOOP terminals without disconnecting the supplied AM loop antenna.

For the best possible reception, suspend horizontally outdoors.
Connecting your equipment

MULTI-ZONE setup

This receiver can power up to two independent systems in separate rooms after you have made the proper MULTI-ZONE connections.

Different sources can be playing in two zones at the same time or, depending on your needs, the same source can also be used. The main and sub zone have independent power (the main zone power can be off while sub zone is on) and the sub zone can be controlled by the remote or front panel controls.

Making MULTI-ZONE connections

It is possible to make these connections if you have a separate TV and speakers for your primary sub zone (ZONE 2). You will also need a separate amplifier if you are not using the speaker terminals for your primary sub zone. (For details, see MULTI-ZONE setup using speaker terminals (ZONE 2) on page 32.) Also, if the separate receiver in the sub zone has an HDMI input terminal, this unit’s HDMI input can be played as HDZONE. Here are two primary sub zone setups possible with this system. Choose whichever works best for you.

Important

• The settings must be change at ZONE Setup in order to use the HDZONE function (page 91).

MULTI-ZONE listening options

The following table shows the signals that can be output to ZONE 2 and HDZONE:

<table>
<thead>
<tr>
<th>Sub Zone</th>
<th>Input functions available</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZONE 2</td>
<td>DVD, SAT/CBL, DVR/BDR, INTERNET RADIO, PANDORA, MEDIA SERVER, FAVORITES, iPod/USB, TV, CD, TUNER, ADAPTER PORT (Outputs analog audio and composite video.)</td>
</tr>
<tr>
<td>HDZONE</td>
<td>BD, DVD SAT/CBL, DVR/BDR, HDMI 1, HDMI 2, HDMI 3, HDMI 4, HDMI 5/7, HDMI 6, HDMI 7 (Outputs HDMI audio and video signals)</td>
</tr>
</tbody>
</table>

a • It is not possible to down-convert the audio and video input signals from the HDMI input terminals, digital input terminals (OPTICAL and COAXIAL) and the COMPONENT VIDEO input terminals and output them to ZONE 2.
• When any of the INTERNET RADIO, PANDORA, MEDIA SERVER, FAVORITES, iPod/USB or ADAPTER PORT inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the sub zone. (Inputs other than the ones listed here can be selected.)

The same limitations apply when one of the above inputs is selected for the sub zone.

b • The inputs that can be switched differ according to how terminals HDMI IN 1 to IN 7 are assigned. Upon shipment from the factory, the input terminals are assigned to DVD, SAT/CBL, DVR/BDR, HDMI 4, HDMI 5/7, HDMI 6 and HDMI 7, in order starting from terminal HDMI IN 1.
• The video/audio signals of the RCA analog input terminals, the digital input terminals (OPTICAL and COAXIAL) and the COMPONENT VIDEO input terminals cannot be up-converted and output to the HDZONE.
• When any of the HDMI 4, HDMI 5/7 inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the HDZONE. (Inputs other than the ones listed here can be selected.)

The same limitations apply when one of the above inputs is selected for the HDZONE.

Basic MULTI-ZONE setup (ZONE 2)

1. Connect a separate amplifier to the AUDIO ZONE 2 OUT jacks on this receiver.
   You should have a pair of speakers attached to the sub zone amplifier as shown in the following illustration.
2. Connect a TV monitor to the VIDEO ZONE 2 OUT jack on this receiver.

MULTI-ZONE setup using speaker terminals (ZONE 2)

You must select ZONE 2 in Speaker system setting (page 86) to use this setup.

1. Connect a pair of speakers to the surround back speaker terminals.
   You should have a pair of speakers attached to the surround back speaker terminals as shown below.
2. Connect a TV monitor to the VIDEO ZONE 2 OUT jack on this receiver.
MULTI-ZONE setup using HDMI terminal (HDZONE)

Important
- The settings must be change at ZONE Setup in order to use the HDZONE function (page 91).
- To use the HDZONE functions, set Control or Control Mode in HDMI Setup to OFF. For details, see HDMI Setup on page 61.

Connect a separate receiver to the HDMI OUT 2 (HDZONE) terminal on this receiver.
Connect speakers and a TV to the HDZONE receiver as shown on the illustration below.

Connecting to the network through LAN interface
By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations. To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand. When connected in this way, you can play audio files stored on the components on the local network, including your computer.

LAN terminal specifications
- LAN terminal : Ethernet jack (10BASE-T/100BASE-TX)

Notes
- Refer to the operation manual of the equipment you have as the connected equipment and connection method may differ depending on your Internet environment.
- When using a broadband Internet connection, a contract with an Internet service provider is required. For more details, contact your nearest Internet service provider.
Connecting optional Bluetooth ADAPTER

When the Bluetooth® ADAPTER (AS-BT100 or AS-BT200) is connected to this receiver, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly.

- The Bluetooth wireless technology enabled device must support A2DP profiles.
- Pioneer does not guarantee proper connection and operation of this unit with all Bluetooth wireless technology enabled devices.
- The Air Jam function cannot be used with the AS-BT100.

Important

- Do not move the receiver with the Bluetooth ADAPTER connected. Doing so could cause damage or faulty contact.
- Switch the receiver into standby and connect Bluetooth ADAPTER to the ADAPTER PORT.
- For instructions on playing the Bluetooth wireless technology device, see Pairing the Bluetooth ADAPTER and Bluetooth wireless technology device on page 48.

Connecting an iPod

This receiver has a dedicated iPod terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver.

Tip

- An iPod/iPhone/iPad can be connected to the receiver. For details on supported models and versions of the respective products, see Playing an iPod on page 44.

- Switch the receiver into standby, and then use the iPod cable to connect your iPod to the iPod/iPhone/iPad terminal on the front panel of this receiver.
  - For the cable connection, also refer to the operating instructions for your iPod.
  - When connecting an iPhone to this unit, keep the iPhone at least 20 cm away from this unit. If the iPhone is kept closer to this unit and a telephone call is received by the iPhone, noise may be output from this device.
  - iPod recharging occurs whenever an iPod is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
  - For instructions on playing the iPod, see Playing an iPod on page 44.

Use a dedicated cable to enjoy iPod video

If an iPod is connected using a dedicated iPod connection cable (sold separately), then video from the iPod can also be enjoyed on a TV that is connected to the receiver.

- The iPod cable is not included with this receiver. The optional iPod cable from Pioneer is sold separately under the part number ADE7136.
  - Contact the Pioneer Customer Support division for more information on obtaining an optional iPod cable.
  - iPhone 5, iPad 4th generation, iPad mini, iPod touch 5th generation and iPod nano 7th generation cannot be connected using a separately sold iPod cable.

CONNECTING YOUR EQUIPMENT
Connecting your equipment

Connecting a USB device

It is possible to play audio and photo files by connecting USB devices to this receiver.

Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.

- This receiver does not support a USB hub.
- For instructions on playing the USB device, see Playing a USB device on page 45.

Connecting an MHL-compatible device

An MHL-compatible mobile device can be connected to enjoy 3D/Full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver. Use the MHL cable to connect the device.

Switch the receiver into standby then use the MHL cable to connect your MHL enabled device to the MHL terminal on the front panel of this receiver.

- To automatically switch to the MHL input when an MHL-compatible device is connected, see MHL Setup on page 89.
- The MHL-compatible device is recharged whenever it is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
- For instructions on playing the MHL-compatible device, see Playing an MHL-compatible device on page 46.

Connecting an HDMI-equipped component to the front panel input

Video camera (etc.)

Connecting to a wireless LAN

Wireless connection to the network is possible through a wireless LAN connection. Use the separately sold AS-WL300 for connection.

- Use only the furnished accessory connecting cable.
- Certain settings are required to use a wireless LAN converter (AS-WL300). For instructions on making these settings, see the operating instructions included with the wireless LAN converter (AS-WL300).
Connecting your equipment

Connecting an IR receiver

If you keep your stereo components in a closed cabinet or shelving unit, or you wish to use the sub zone remote control in another zone, you can use an optional IR receiver (such as a Niles or Xantech unit) to control your system instead of the remote sensor on the front panel of this receiver.

- Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
- Note that other manufacturers may not use the IR terminology. Refer to the manual that came with your component to check for IR compatibility.
- If using two remote controls (at the same time), the IR receiver’s remote sensor takes priority over the remote sensor on the front panel.

1. Connect the IR receiver sensor to the IR IN jack on the rear of this receiver.

2. Connect the IR IN jack of another component to the IR OUT jack on the rear of this receiver to link it to the IR receiver.

Plugging in the receiver

Only plug in after you have connected all your components to this receiver, including the speakers.

⚠️ CAUTION

- Handle the power cord by the plug part. Do not pull out the plug by tugging the cord, and never touch the power cord when your hands are wet, as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, or other object on the power cord or pinch the cord in any other way. Never make a knot in the cord or tie it with other cables. The power cords should be routed so that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electric shock. Check the power cord once in a while. If you find it damaged, ask your nearest Pioneer authorized independent service company for a replacement.
- Do not use any power cord other than the one supplied with this unit.
- Do not use the supplied power cord for any purpose other than that described below.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.
- Make sure the blue STANDBY/ON light has gone out before unplugging.

1. Plug the supplied power cord into the AC IN socket on the back of the receiver.

2. Plug the other end into a power outlet.

- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during this process. The HDMI indicator in the front panel display blinks during this process, and you can turn on this receiver once it has stopped blinking. When you set the Control with HDMI to OFF, you can skip this process. For details about the Control with HDMI feature, see Control with HDMI function on page 60.

Please see the manual supplied with your IR receiver for the type of cable necessary for the connection.
Basic Setup

- Automatically conducting optimum sound tuning (Full Auto MCACC).......................... 38
- The Input Setup menu .................................................................................................. 39
- Operation Mode Setup ................................................................................................. 40
- Changing the OSD display language (OSD Language) .................................................. 41
- About the Home Menu ................................................................................................. 41
Automatically conducting optimum sound tuning (Full Auto MCACC)

The Full Auto MCACC Setup measures the acoustic characteristics of your listening area, taking into account ambient noise, speaker connection and speaker size, and tests for both channel delay and channel level. After you have set up the microphone provided with your system, the receiver uses the information from a series of test tones to optimize the speaker settings and equalization for your particular room.

Important
- Make sure the microphone and speakers are not moved during the Full Auto MCACC Setup.
- Using the Full Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.
- Before using the Full Auto MCACC Setup, the headphones should be disconnected.
- The Full Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.
- Before using the Full Auto MCACC Setup, the headphones should be disconnected.

CAUTION
- If you leave the GUI screen for over five minutes, the screen saver will appear.

1 Press STANDBY/ON to switch on the receiver and your TV.
Make sure that the TV’s video input is set to this receiver.

2 Connect the microphone to the MCACC SETUP MIC jack on the front panel.

3 Select the parameters you want to set.
- When data measurement is taken, the reverb characteristics data (both before- and after-calibration) that this receiver had been storing will be overwritten.
- When measurement is taken of the reverb characteristics data other than SYMMETRY, the data are not measured after the correction. If you will need to measure after correcting data, take the measurement using the EQ Professional menu in the Manual MCACC setup (page 80).

If the speakers are connected using any setup other than Normal(SB/FH), be sure to set Speaker System before the Full Auto MCACC Setup. See Speaker system setting on page 86.

4 Press RECEIVER then select START.

5 Follow the instructions on-screen.
Make sure the microphone is connected, and if you’re using a subwoofer, make sure it is switched on and set to a comfortable volume level.

The Full Auto MCACC display appears once the microphone is connected.
6 Wait for the test tones to finish, then confirm the speaker configuration in the GUI screen. A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this. If no operations are performed for 10 seconds while the receiver outputs test tones, the Full Auto MCACC Setup will resume automatically. In this case, you don’t need to select ‘OK’ and press ENTER in step 7.

- With error messages (such as Too much ambient noise! or Check microphone.), select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup on page 39) and verifying the microphone connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.

The configuration shown on-screen should reflect the actual speakers you have.
- If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑/↓ to select the speaker and ↔ to change the setting and continue.
- If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the mixing environment, we recommend adjusting the settings manually.
- Reverse Phase is displayed, the speaker’s wiring (+ and –) may be inverted. Check the speaker connections.
  - If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly.
  - After this, perform the Full Auto MCACC procedure again.
- If the connections were right, select GO NEXT and continue.

7 Make sure ‘OK’ is selected, then press ENTER. A progress report is displayed on-screen while the receiver outputs test tones to determine the optimum receiver settings. Again, try to be as quiet as possible while this is happening. It may take 3 to 10 minutes.

8 The Full Auto MCACC Setup procedure is completed and the Home Menu menu reappears automatically.

Problems when using the Auto MCACC Setup
If the room environment is not optimal for the Auto MCACC Setup (too much background noise, echo off the walls, obstacles blocking the speakers from the microphone) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.) that may be affecting the environment and switch them off if necessary. If there are any instructions showing in the front panel display, please follow them.
- Some older TVs may interfere with the operation of the microphone. If this seems to be happening, switch off the TV when doing the Auto MCACC Setup.

The Input Setup menu
You only need to make settings in the Input Setup menu if you didn’t hook up your digital equipment according to the default settings (see Input function default and possible settings on page 40). In this case, you need to tell the receiver what equipment is hooked up to which terminal so the buttons on the remote control correspond to the components you’ve connected.
- The OSD display is only displayed when the receiver’s HDMI OUT 1 terminal and the TV’s HDMI input are connected with an HDMI cable. If the TV is connected with anything other than an HDMI cable, watch the front panel display while performing the various operations and making settings.

1 Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use ↑↓←→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2 Select ‘System Setup’ from the Home Menu.

3 Select ‘Input Setup’ from the System Setup menu.

4 Select the input function that you want to set up. The default names correspond with the names next to the terminals on the rear panel (such as DVD or SAT/CBL which, in turn, correspond with the names on the remote control).

5 Select the input(s) to which you’ve connected your component. For example, if your DVD player only has an optical output, you will need to change the DVD input function’s Audio In setting from COAX-1 (default) to the optical input you’ve connected it to. The numbering (OPT-1 to OPT-2) corresponds with the numbers beside the inputs on the back of the receiver.

6 When you’re finished, proceed to the settings for other inputs. There are optional settings in addition to the assignment of the input jacks:
- Input Name – You can choose to rename the input function for easier identification. Select Rename to do so, or Default to return to the system default.
- Input Skip – When set to ON, that input is skipped when selecting the input using INPUT SELECT. (DVD and other inputs can be still be selected directly with the input function buttons.)

7 When you’re finished, press RETURN. You will return to the System Setup menu.
Input function default and possible settings

The terminals on the receiver generally correspond to the name of one of the input functions. If you have connected components to this receiver differently from (or in addition to) the defaults below, see The Input Setup menu on page 39 to tell the receiver how you’ve connected up. The dots (●) indicate possible assignments.

a When ARC at HDMI Setup is set to ON, it is not possible to make assignments to the TV input’s Audio In terminals.
b Only the TV and CD inputs can be assigned to ANALOG-1.

Operation Mode Setup

This receiver is equipped with a great number of functions and settings. The Operation Mode feature is provided for users who find it difficult to master all these functions and settings.

One of two settings can be selected for the Operation Mode: Expert and Basic.

- The OSD display is only displayed when the receiver’s HDMI OUT 1 terminal and the TV’s HDMI input are connected with an HDMI cable. If the TV is connected with anything other than an HDMI cable, watch the front panel display while performing the various operations and making settings.

Important

- Many of the settings and functions cannot be selected when the Operation Mode is changed to Basic.

1 Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use ▲▼◆듯 and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2 Select ‘Operation Mode Setup’ from the Home Menu.

3 Select the Operation Mode setting you want.

- Expert (default) – Users can set all the functions by themselves.
- Basic – Only certain basic settings can be operated. The settings that can be operated are shown below. They can be set as necessary by referring to the operating instructions.

iPod iPhone iPad DIRECT CONTROL | Switches the input to iPod/USB and sets the mode allowing operation from the iPod. | 44

When you’re finished, press RETURN. You will return to the Home Menu.

### Changing the OSD display language (OSD Language)

The language used on the Graphical User Interface screen can be changed.

- The explanations in these operating instructions are for when English is selected for the GUI screen.
- The OSD display is only displayed when the receiver’s HDMI OUT 1 terminal and the TV’s HDMI input are connected with an HDMI cable. If the TV is connected with anything other than an HDMI cable, watch the front panel display while performing the various operations and making settings.

1. Press  STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver (for example, if you connected this receiver to the VIDEO jacks on your TV, make sure that the VIDEO input is now selected).
2. Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use  /  /  /  and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
4. Select ‘OSD Language’ from the System Setup menu.
5. Select the desired language.
6. Select ‘OK’ to change the language. The setting is completed and the System Setup menu reappears automatically.

### About the Home Menu

This receiver’s Home Menu (HOME MENU) can be used to make various settings and to check and adjust items that have been set.

- The OSD display is only displayed when the receiver’s HDMI OUT 1 terminal and the TV’s HDMI input are connected with an HDMI cable. If the TV is connected with anything other than an HDMI cable, watch the front panel display while performing the various operations and making settings.
- To display the Home Menu screen, press RECEIVER on the remote control, then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use  /  /  /  and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu. The top level in the Home Menu is as shown below. Refer to the respective explanations to set, check and adjust as necessary.

- **Advanced MCACC** – Use this to make automatic settings and detailed manual settings for the surround sound. For details, see Making receiver settings from the Advanced MCACC menu on page 79.
- **MCACC Data Check** – Use this to check the MCACC memory. For details, see Checking MCACC Data on page 83.
- **Data Management** – Use this to manage the data in the MCACC memory. For details, see Data Management on page 83.
- **System Setup** – Use this to make various settings related to this system. For details, see Making receiver settings from the System Setup menu on page 86.
- **Network Information** – The setting status of the network-related items can be checked. For details, see Checking the Network Information on page 85.
- **Operation Mode Setup** – Use this to select this receiver’s operation mode. For details, see Operation Mode Setup on page 46.

Basic playback

Playing a source
Here are the basic instructions for playing a source (such as a DVD disc) with your home theater system.

1 Switch on your system components and receiver.
Start by switching on the playback component (for example a DVD player), your TV and subwoofer (if you have one), then the receiver (press STANDBY/ON). Make sure that the TV’s video input is set to this receiver.

2 Select the input function you want to play.
You can use the input function buttons on the remote control, INPUT SELECT, or the front panel INPUT SELECTOR dial.
- If you need to manually switch the input signal type press SIGNAL SEL (page 53).

3 Press RECEIVER to the receiver operation mode.

4 Press AUTO/ALC/DIRECT (AUTO SURR/ALC/STREAM DIRECT) to select ‘AUTO SURROUND’ and start playback of the source.
If you’re playing a Dolby Digital or DTS surround sound source, you should hear surround sound. If you are playing a stereo source, you will only hear sound from the front left/right speakers in the default listening mode.
- You may need to check the digital audio output settings on your DVD player or digital satellite receiver. It should be set to output Dolby Digital, DTS and 88.2 kHz / 96 kHz PCM (2 channel) audio, and if there is an MPEG audio option, set this to convert the MPEG audio to PCM.
- See also Listening to your system on page 50 for information on different ways of listening to sources.

5 Use the VOLUME +/- to adjust the volume level.
Turn down the volume of your TV so that all sound is coming from the speakers connected to this receiver.

Note
Depending on the input to be played, the playback operation can in some cases be performed using the on-screen display.
The OSD display is only displayed when the receiver’s HDMI OUT 1 terminal and the TV’s HDMI input are connected with an HDMI cable. If the TV is connected with anything other than an HDMI cable, watch the front panel display while performing the various operations and making settings.

Turning off the sound
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
- Press MUTE.

Playing a source with HDMI connection
- Use INPUT SELECT to select the input function connected to the receiver’s HDMI input terminals.
You can also perform the same operation by using the INPUT SELECTOR dial on the front panel or by pressing HDMI on the remote control repeatedly.
- Set the HDMI parameter in Setting the Audio options on page 65 to THROUGH if you want to hear HDMI audio output from your TV (no sound will be heard from this receiver).
- If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, use an analog video connection.

Input Volume Absorber
This can be used to correct for the difference in volume between input sources.
1 Switch to the input whose volume you want to adjust.
2 Press RECEIVER to the receiver operation mode.
3 Press CH LEVEL.
4 Use ↑ / ↓ to select ‘ALL’.
5 Adjust the volume using ← / →.
The volume can be adjusted in the range of -12.0dB to +12.0dB, 0.5 dB steps.
6 When you’re finished, press RETURN.
Playing an iPod

This receiver has the iPod/iPhone/iPad terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver. Here we describe the procedure for playback on an iPod. For playback on a USB device, see Playing a USB device on page 45.

Important

- USB works with iPhone 5, iPhone 4S, iPhone 4, iPhone 3GS, iPhone 3G, iPad, iPad 3rd generation, iPad mini, iPod touch (1st through 5th generation) and iPod nano (3rd through 7th generation). Audio only for iPhone 5, iPad 4th generation, iPad mini, iPod touch 5th generation and iPod nano (6th and 7th generation).
- However, some of the functions may be restricted for some models.
- This receiver has been developed and tested for the software version of iPod/iPhone/iPad indicated on the website of Pioneer (http://pioneer.jp/homeav/support/ios/na/).
- Installing software versions other than indicated on the website of Pioneer to your iPod/iPhone/iPad may result in incompatibility with this receiver.
- iPod, iPhone and iPad are licensed for reproduction of non-copyrighted materials or materials the user is legally permitted to reproduce.
- Features such as the equalizer cannot be controlled using this receiver, and we recommend switching the equalizer off before connecting.
- Pioneer cannot under any circumstances accept responsibility for any direct or indirect loss arising from any inconvenience or loss of recorded material resulting from the iPod failure.
- When listening to a track on the iPod in the main zone, it is possible to control the sub zone, but not to listen to a different track in the sub zone from the one playing in the main zone.

1 Press STANDBY/ON to switch on the receiver and your TV.

See Connecting an iPod on page 34.

About one minute is required between turning the power on and completion of startup.

- It is also possible to operate the iPod on the iPod itself, without using the TV screen. For details, see Switching the iPod controls on page 44.

2 Press iPod USB on the remote control to switch the receiver to the iPod/USB.

When the display shows the names of folders and files, you’re ready to play music from the iPod.

- The controls of your iPod will be inoperable when connected to this receiver.

Playing back audio files stored on an iPod

To navigate songs on your iPod, you can take advantage of the GUI screen of your TV connected to this receiver. You can also control all operations for music in the front panel display of this receiver.

- Note that characters that cannot be displayed on this receiver are displayed as #.
- This feature is not available for photos on your iPod. To display photos, switch iPod operation to the iPod (see Switching the iPod controls on page 44).

Finding what you want to play

When your iPod is connected to this receiver, you can browse songs stored on your iPod by playlist, artist name, album name, song name, genre or composer, similar to using your iPod directly.

1 Use †/ ‡ to select a category, then press ENTER to browse that category.

- When † or ‡ is pressed at the list screen, the page switches.
- To return to the previous level any time, press RETURN.

2 Use †/ ‡ to browse the selected category (e.g., albums).

- Use †/ ‡ to move to previous/next levels.

3 Continue browsing until you arrive at what you want to play, then press † to start playback.

Note

You can play all of the songs in a particular category by selecting the All item at the top of each category list. For example, you can play all the songs by a particular artist.

Basic playback controls

This receiver’s remote control buttons can be used for basic playback of files stored on an iPod.

- Press iPod USB to switch the remote control to the iPod/USB operation mode.

Switching the iPod controls

You can switch over the iPod controls between the iPod and the receiver.

1 Press iPod CTRL to switch the iPod controls.

This enables operation and display on your iPod, and this receiver’s remote control and GUI screen become inactive.

2 Press iPod CTRL again to switch back to the receiver controls.

Note

Change the receiver’s input to the iPod in one action by pressing the iPod iPhone iPad DIRECT CONTROL button on the front panel to enable iPod operations on the iPod.
Playing a USB device

It is possible to play files using the USB interface on the front of this receiver.

- Compatible USB devices include external magnetic hard drives, portable flash memory drives (particularly key drives) and digital audio players (MP3 players) of format FAT16/32.
- Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.

1. Press STANDBY/ON to switch on the receiver and your TV. See Connecting a USB device on page 35.
   About one minute is required between turning the power on and completion of startup.

2. Press iPod USB on the remote control to switch the receiver to the iPod/USB.
   When the display shows the names of folders and files, you're ready to play from the USB device.

   **Note**
   If an Over Current message lights in the display, the power requirements of the USB device are too high for this receiver. Try following the points below:
   - Switch the receiver off, then on again.
   - Reconnect the USB device with the receiver switched off.
   - Use a dedicated AC adapter (supplied with the device) for USB power.
   If this doesn’t remedy the problem, it is likely your USB device is incompatible.

Playing back audio files stored on a USB memory device

The maximum number of levels that you can select in Step 2 (below) is 9.

- Note that non-Roman characters in the playlist are displayed as #.

1. Use \ or \ to select a folder, then press ENTER to browse that folder.
   - To return to the previous level any time, press RETURN.
2. Continue browsing until you arrive at what you want to play, then press \ to start playback.
   - Copyrighted audio files cannot be played back on this receiver.
   - DRM-protected audio files cannot be played back on this receiver.

**Basic playback controls**

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENTER</td>
<td>Starts displaying a photo and playing a slideshow.</td>
</tr>
<tr>
<td></td>
<td>Stops the player and returns to the previous menu.</td>
</tr>
</tbody>
</table>

**Tip**

- Slideshows of photo files can be played while listening to music files by returning to the folder/file list display while playing a music file on a USB device then playing the photo files.

Playing back photo files stored on a USB memory device

- Photo files cannot be played in the sub zone.

1. Use \ or \ to select a folder, then press ENTER to browse that folder.
   - For high resolution files, some time may be required for the photo to appear.
   - To return to the previous level any time, press RETURN.
2. Continue browsing until you arrive at what you want to play, then press ENTER to start playback.
   The selected content is displayed in full screen and a slideshow starts.

**Basic playback controls**

<table>
<thead>
<tr>
<th>Button(s)</th>

</tr>
</tbody>
</table>

**Tip**

- Slideshows of photo files can be played while listening to music files by returning to the folder/file list display while playing a music file on a USB device then playing the photo files.
About playable file formats

The USB function of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats.

- With WAV, FLAC, AIFF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.

### Playing an MHL-compatible device

MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats. The MHL-compatible device’s video signals are output from the TV connected to the receiver, the audio signals are output from the speakers connected to the receiver or TV.

1. **Press STANDBY/ON to switch on the receiver and your TV.**
2. **Press MHL on the remote control to switch the receiver to the MHL.**
3. **Select and play the desired contents on the MHL-compatible device.**

### Notes

- MHL-compatible devices can be operated with the receiver’s remote control by pressing the remote control’s MHL button, but depending on the MHL-compatible device being used, some buttons may not be operable.
- To playback from a MHL-compatible device connected to the receiver on a TV that is also connected to the receiver, the power to the receiver must be turned on.
Listening to the radio

The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the frequency of the station you want, see Tuning directly to a station below. Once you are tuned to a station you can memorize the frequency for recall later—see Saving station presets on page 47 for more on how to do this.

1. Press TUNER to select the tuner.
2. Use BAND to change the band (FM or AM), if necessary.
3. Tune to a station.

There are three ways to do this:
- **Automatic tuning** – To search for stations in the currently selected band, press and hold TUNE +/– for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.
- **Manual tuning** – To change the frequency one step at a time, press TUNE +/–.
- **High speed tuning** – Press and hold TUNE +/– for high speed tuning. Release the button at the frequency you want.

Improving FM sound

If the TUNED or STEREO indicator doesn’t light when tuning to an FM station because the signal is weak, press MPX to switch the receiver into mono reception mode. This should improve the sound quality and allow you to enjoy the broadcast.

Using the noise cut mode

The two noise cut modes can be used when receiving AM broadcasts. Press MPX to select the noise cut mode (1 to 2).

Tuning directly to a station

1. Press TUNER to select the tuner.
2. Use BAND to change the band (FM or AM), if necessary.
4. Use the number buttons to enter the frequency of the radio station.

For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.

If you make a mistake halfway through, press D.ACCESS twice to cancel the frequency and start over.

Saving station presets

If you often listen to a particular radio station, it’s convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This receiver can memorize up to 63 stations, stored in seven banks, or classes (A to G) of 9 stations each.

1. Tune to a station you want to memorize.

   See Listening to the radio on page 47 for more on this.

2. Press TOOLS (TUNER EDIT).

   The display shows PRESET MEMORY, then a blinking memory class.

3. Press CLASS to select one of the seven classes, then press PRESET +/- to select the station preset you want.

   You can also use the number buttons to select a station preset.

4. Press ENTER.

   After pressing ENTER, the preset class and number stop blinking and the receiver stores the station.

Listening to station presets

1. Press TUNER to select the tuner.

2. Press CLASS to select the class in which the station is stored.

   Press repeatedly to cycle through classes A to G.

3. Press PRESET +/- to select the station preset you want.

   You can also use the number buttons on the remote control to recall the station preset.

Naming station presets

For easier identification, you can name your station presets.

1. Choose the station preset you want to name.

   See Listening to station presets on page 47 for how to do this.

2. Press TOOLS (TUNER EDIT).

   The display shows PRESET NAME, then a blinking cursor at the first character position.

3. Input the name you want.

   Use TUNE +/- (or TUNE i/j of front panel) to select a character, PRESET +/- (or PRESET k/l of front panel) to set the position, and ENTER to confirm your selection.

   Notes
   - To erase a station name, simply repeat steps 1 to 3 and input eight spaces instead of a name.
   - Once you have named a station preset, you can press DISP when listening to a station to switch the display between name and frequency.
**Basic playback**

**Pairing the Bluetooth ADAPTER and Bluetooth wireless technology device**

“Pairing” must be done before you start playback of Bluetooth wireless technology content using the Bluetooth ADAPTER. Make sure to perform pairing the first time you operate the system or any time pairing data is cleared.

The pairing step is necessary to register the Bluetooth wireless technology device to enable Bluetooth communications. For more details, see also the operating instructions of your Bluetooth wireless technology device.

- **Pairing is required when you first use the Bluetooth wireless technology device and Bluetooth ADAPTER.**
- To enable Bluetooth communication, pairing should be done with both your system and Bluetooth wireless technology device.
- If the Bluetooth wireless technology device’s security code is “0000”, there is no need to make the security code setting on the receiver. Press ADPT to set the ADAPTER PORT input, then conduct the pairing operation on the Bluetooth wireless technology device. If pairing is successful, there is no need to performing the pairing operation below.
- When using the AS-BT200 only: This unit complies with Bluetooth Specifications Ver. 2.1. When this unit and another device equipped with Bluetooth wireless technology both comply with Bluetooth Specification Ver. 2.1, pairing of the two may be possible without the need for inputting a password.

In this case, a passcode may be displayed on this receiver and on the device equipped with Bluetooth wireless technology. If this happens, check that the same passcode is displayed on this receiver and the device equipped with Bluetooth wireless technology, then press ENTER. After this, also perform the connection operation on the Bluetooth device to be connected. If the passcode does not match the code displayed on the Bluetooth device to be connected, press RETURN to cancel pairing, then try starting over.

Press ADPT to set the ADAPTER PORT input, then conduct the pairing operation on the Bluetooth wireless technology device. If pairing is successful, there is no need to performing the pairing operation below.

- **Pair one unit at a time.**
- When connecting this receiver by Bluetooth connections with a device equipped with the Bluetooth function to listen to music, do not connect any devices other than this receiver by Bluetooth connection to the Bluetooth-equipped device. If a Bluetooth connection is already established with a device other than this receiver, disconnect the other device before connecting this receiver.

1. Press ADPT on the remote control to switch the receiver to ADAPTER PORT input.
2. Press TOP MENU to select Bluetooth Setup.
3. Use † / ‡ to select ‘PIN’ then press ENTER.
4. Use † / ‡ to select one of PIN codes 0000, 1234 or 8888, then press ENTER. You can use any of 0000, 1234 or 8888 PIN codes. Bluetooth wireless technology device using any other PIN code cannot be used with this receiver.
5. Press the RETURN button twice to exit Bluetooth Setup.
6. Switch on the Bluetooth wireless technology device that you want to make pair, place it near the receiver and set it to the pairing mode.
7. From the Bluetooth wireless technology device list, select Bluetooth ADAPTER and enter the PIN code selected in step 4.
8. Check to see that the Bluetooth ADAPTER is detected by the Bluetooth wireless technology device.

If the receiver and Bluetooth wireless technology device are not paired, start over from step 6.

**Notes**

- The PIN code may in some cases be referred to as PASSKEY.
- For information on enabling pairing on the Bluetooth wireless technology device, connection procedures, etc., see the Bluetooth wireless technology device’s operating instructions.

**Bluetooth ADAPTER for Wireless Enjoyment of Music**

- **About one minute is required between turning the power on and completion of startup.**

**Wireless music play**

When the Bluetooth ADAPTER (AS-BT100 or AS-BT200) is connected to this unit, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly. Also, by using a commercially available transmitter supporting Bluetooth wireless technology, you can listen to music on a device not equipped with Bluetooth wireless technology. Bluetooth supports SCMS-T contents protection, so music can also be enjoyed on devices equipped with SCMS-T type Bluetooth wireless technology enabled devices.

**Remote control operation**

The remote control supplied with this unit allows you to play and stop media, and perform other operations.

- It must be necessary that the Bluetooth wireless technology enabled device supports AVRCP profiles.
- Remote control operations cannot be guaranteed for all Bluetooth wireless technology enabled devices.

**Listening example**

When the Bluetooth ADAPTER (AS-BT100 or AS-BT200) is connected to this unit, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly. Also, by using a commercially available transmitter supporting Bluetooth wireless technology, you can listen to music on a device not equipped with Bluetooth wireless technology. Bluetooth supports SCMS-T contents protection, so music can also be enjoyed on devices equipped with SCMS-T type Bluetooth wireless technology.

- The Air Jam function cannot be used with the AS-BT100.

**Remote control operation**

The remote control supplied with this unit allows you to play and stop media, and perform other operations.

- It must be necessary that the Bluetooth wireless technology enabled device supports AVRCP profiles.
- Remote control operations cannot be guaranteed for all Bluetooth wireless technology enabled devices.

**Listening example**

When the Bluetooth ADAPTER (AS-BT100 or AS-BT200) is connected to this unit, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly. Also, by using a commercially available transmitter supporting Bluetooth wireless technology, you can listen to music on a device not equipped with Bluetooth wireless technology. Bluetooth supports SCMS-T contents protection, so music can also be enjoyed on devices equipped with SCMS-T type Bluetooth wireless technology.

- The Air Jam function cannot be used with the AS-BT100.

**Remote control operation**

The remote control supplied with this unit allows you to play and stop media, and perform other operations.

- It must be necessary that the Bluetooth wireless technology enabled device supports AVRCP profiles.
- Remote control operations cannot be guaranteed for all Bluetooth wireless technology enabled devices.

**Listening example**

When the Bluetooth ADAPTER (AS-BT100 or AS-BT200) is connected to this unit, a product equipped with Bluetooth wireless technology (portable cell phone, digital music player, etc.) can be used to listen to music wirelessly. Also, by using a commercially available transmitter supporting Bluetooth wireless technology, you can listen to music on a device not equipped with Bluetooth wireless technology. Bluetooth supports SCMS-T contents protection, so music can also be enjoyed on devices equipped with SCMS-T type Bluetooth wireless technology.

- The Air Jam function cannot be used with the AS-BT100.
Listening to music contents of a Bluetooth wireless technology device with your system

1. Press ADPT on the remote control to switch the receiver to ADAPTER PORT input.
2. From the Bluetooth wireless technology device, perform the operation to connect to the Bluetooth ADAPTER.
   - When the Bluetooth ADAPTER is not plugged into the ADAPTER PORT, No Adapter will be displayed if ADAPTER PORT input is selected.
3. Start playback of music contents stored on the Bluetooth wireless technology device.
   This receiver’s remote control buttons can be used for basic playback of files stored on Bluetooth wireless technology devices.
   - Bluetooth wireless technology device should be compatible with AVRCP profile.
   - Depending on the Bluetooth wireless technology device you use, operation may differ from what is shown in the remote control buttons.
4. While listening to a source, set the remote control to the receiver operation mode, then press ADV SURR repeatedly to select SOUND RETRIEVER AIR.

Notes
- The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by PIONEER CORPORATION is under license. Other trademarks and trade names are those of their respective owners.
- When Air Jam is set to Air Jam ON, playback is not possible with the above procedure. Set Air Jam to Air Jam OFF before playing (page 49).
- With this receiver, when an iPod is connected or disconnected while the music of a Bluetooth wireless technology device is playing, the connection with the Bluetooth wireless technology device may be canceled.

Air Jam
Air Jam - a Pioneer-exclusive application and available for free. Air Jam lets you connect multi compatible devices to this unit using Bluetooth wireless technology. With it, you can make a group playlist directly on a supported device to play in your home theater through the unit. You and your friends can add songs from your devices to the playlist. Also Air Jam lets you delete the song before anyone has to hear it.

1. Press ADPT on the remote control to switch the receiver to ADAPTER PORT input.
2. Press TOP MENU to select Bluetooth Setup.
3. Use ‹/› to select ‘Air Jam’ then press ENTER.
4. Use ‹/› to select ‘Air Jam ON’ then press ENTER.
5. Press the RETURN button twice to exit Bluetooth Setup.

For more details of using Air Jam, access to our website:

Notes
- Bluetooth technology works with iPhone 5, iPhone 4S, iPhone 4, iPhone 3GS, iPhone 3G, iPhone, iPad (3rd and 4th generation), iPad 2, iPad, iPad mini, and iPod touch (2nd through 5th generation).
- The Air Jam function cannot be used while an iPod is connected to this receiver.
Listening to your system

Enjoying various types of playback using the listening modes ........................................... 51
Selecting MCACC presets ........................................................................................................ 53
Choosing the input signal ........................................................................................................ 53
Better sound using Phase Control .......................................................................................... 53
Enjoying various types of playback using the listening modes

Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you're listening to.

To play with surround sound, check “Standard surround sound” or “Using the Advanced surround effects” below and select the desired mode.

To play with the optimum mode for the input signal, see “Auto playback” or “Using Stream Direct”. (The sound is played in stereo when 2-channel signals are input, in surround when multi-channel signals are input.)

**Important**

- The listening modes and many features described in this section may not be available depending on the current source, settings and status of the receiver.

**Auto playback**

There are many ways to listen back to sources using this receiver, but the simplest, most direct listening option is the Auto Surround feature. The receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.

1. Press RECEIVER to the receiver operation mode.
2. While listening to a source, press AUTO/ALC/DIRECT (AUTO SURR/ALC/STREAM DIRECT) for auto playback of a source.

**AUTO SURROUND** shows briefly in the display before showing the decoding or playback format. Check the digital format indicators in the front panel display to see how the source is being processed.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.

- While listening to the ADAPTER PORT input, the SOUND RETRIEVER AIR feature is selected automatically.

**ALC** – In the Auto level control (ALC) mode, this receiver equalizes playback sound levels. Also, the low and high frequency sounds, dialogs, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.

**Note**

When ALC is selected, the effect level can be adjusted using the EFFECT parameter in Setting the Audio options on page 66.

**Standard surround sound**

The following modes provide basic surround sound for stereo and multichannel sources.

1. Press RECEIVER to the receiver operation mode.
2. While listening to a source, press STANDARD (STANDARD SURROUND).

If necessary, press repeatedly to select a listening mode.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.

- If the surround back speakers are not connected, **Pro Logic IIX** becomes **Pro Logic II** (5.1 channel sound).

- **Pro Logic IIX HEIGHT** cannot be selected when no front height speaker is connected. Furthermore, **WIDE SURROUND MOVIE** and **WIDE SURROUND MUSIC** cannot be selected when no front wide speaker is connected.

With two channel sources, you can select from:

- **Pro Logic IIX MOVIE** – Up to 7.1 channel sound (surround back), especially suited to movie sources
- **Pro Logic IIX MUSIC** – Up to 7.1 channel sound (surround back), especially suited to music sources
- **Dolby Digital EX** – Creates surround back channel sound for 5.1 channel sources and provides pure decoding for 6.1 channel sources (like Dolby Digital Surround EX)
- **DTS-ES Matrix** or **DTS-ES Discrete** – Allows you to hear 6.1 channel playback with DTS-ES encoded sources
- **Neo:X CINEMA** – See above
- **Neo:X MUSIC** – See above
- **Neo:X GAME** – See above
- **Pro Logic IIX HEIGHT** – See above
- **WIDE SURROUND MOVIE** – See above
- **WIDE SURROUND MUSIC** – See above
- **STEREO** – See above
- **Straight Decode** – Plays back without the effects above.

**Notes**

- When listening sources in **Pro Logic IIX HEIGHT** mode, you can also adjust the **H.GAIN** effect (see Setting the Audio options on page 66).
- When listening to 2-channel sources in Dolby Pro Logic IIX Music mode, there are three further parameters you can adjust: **C.WIDTH DIMENSION** and **PANORAMA**. See Setting the Audio options on page 66 to adjust them.
- When listening to 2-channel sources in Neo:X Cinema, Neo:X Music or Neo:X Game mode, you can also adjust the **C.GAIN** effect (see Setting the Audio options on page 66).
- When listening through headphones, you can select **STEREO** mode only.
Using the Advanced surround effects

The Advanced surround effects can be used for a variety of additional surround sound effects. Most Advanced Surround modes are designed to be used with film soundtracks, but some modes are also suited for music sources. Try different settings with various soundtracks to see which you like.

1 Press RECEIVER to the receiver operation mode.

2 Press ADV SURR (ADVANCED SURROUND) repeatedly to select a listening mode.
   - ACTION – Designed for action movies with dynamic soundtracks
   - DRAMA – Designed for movies with lots of dialog
   - ADVANCED GAME – Suitable for video games
   - SPORTS – Suitable for sports programs
   - CLASSICAL – Gives a large concert hall-type sound
   - ROCK/POP – Creates a live concert sound for rock and/or pop music
   - EXT.Stereo – Gives multichannel sound to a stereo source, using all of your speakers
   - F.S.SURROUND – Use to provide a rich surround sound effect directed to the center of where the front left and right speakers sound projection area converges.
   - SOUND RETRIEVER AIR – Suitable for listening to the sound from a Bluetooth wireless technology device.
   - PHONES SURR – Suitable for listening to the sound from headphones.
   - ECO MODE 1 – Select this to play for example music that has a high audio level with a lower power consumption than usual.
   - ECO MODE 2 – Select this to play movies, etc., with a high ratio of low volume scenes and high volume scenes (a large dynamic ratio) with a lower power consumption than usual. This mode provides greater power savings than ECO MODE 1.

Notes
- The Front Stage Surround Advance (F.S.SURROUND) function allows you to create natural surround sound effects using just the front speakers and the subwoofer.
- When ECO MODE 1 or ECO MODE 2 is selected, the front panel’s display lights with the dimmest brightness.
- When using headphones, SOUND RETRIEVER AIR (only with the ADAPTER PORT input). PHONES SURR.
- ECO MODE 1 and ECO MODE 2 can be selected.

Using Stream Direct

Use the Stream Direct modes when you want to hear the truest possible reproduction of a source. All unnecessary signal processing is bypassed, and you’re left with the pure analog or digital sound source. Processing differs depending on the input signal and whether or not surround back speakers are connected. For details, see Auto Surround, ALC and Stream Direct with different input signal formats on page 106.

1 Press RECEIVER to the receiver operation mode.

2 While listening to a source, press AUTO/ALC/DIRECT (AUTO SURR/ALC/STREAM DIRECT) to select the mode you want.

Check the digital format indicators in the front panel display to see how the source is being processed.
- AUTO SURROUND – See Auto playback on page 51.
- ALC – Listening in Auto level control mode. (page 51).
  - When ALC is selected, the effect level can be adjusted using the EFFECT parameter in Setting the Audio options on page 65.
- DIRECT – Plays back sound from the source with the least modification next to PURE DIRECT. With DIRECT, the only modifications added to PURE DIRECT playback are calibration of the sound field by the MCACC system and the Phase Control effect.
- PURE DIRECT – Plays back unmodified sound from source with only minimal digital treatment.

Note
When listening through headphones, you can select ALC or PURE DIRECT mode only.
Selecting MCACC presets

- Default setting: MEMORY 1
If you have calibrated your system for different listening positions, you can switch between settings to suit the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

1. Press RECEIVER to the receiver operation mode.
2. While listening to a source, press MCACC. Press repeatedly to select one of the six MCACC presets. See Data Management on page 83 to check and manage your current settings.
   - These settings have no effect when headphones are connected.
   - You can also press \( \leftrightarrow \) to select the MCACC preset.

Choosing the input signal

On this receiver, it is possible to switch the input signals for the different inputs as described below.

- This receiver can only play back Dolby Digital, PCM (32 kHz to 192 kHz) and DTS (including DTS 96/24) digital signal formats. The compatible signals via the HDMI terminals are: Dolby Digital, DTS, PCM (32 kHz to 192 kHz), Dolby TrueHD, Dolby Digital Plus, DTS-EXPRESS, DTS-HD Master Audio and SACD.
- You may get digital noise when an LD, CD, DVD or BD player compatible with DTS is playing an analog signal. To prevent noise, make the proper digital connections (page 24) and set the signal input to DIGITAL.
- Some DVD players don’t output DTS signals. For more details, refer to the instruction manual supplied with your DVD player.

1. Press RECEIVER to the receiver operation mode.
2. Press SIGNAL SEL to select the input signal corresponding to the source component.
   - Each press cycles through the options as follows:
     - AUTO – The receiver selects the first available signal in the following order: HDMI, DIGITAL, ANALOG.
     - ANALOG – Selects an analog signal.
     - DIGITAL – Selects an optical or coaxial digital signal.
     - HDMI – Selects an HDMI signal.
       - When the HDMI audio output parameter is set to THROUGH, the sound will be heard through your TV, not from this receiver.

Better sound using Phase Control

This receiver’s Phase Control feature uses phase correction measures to make sure your sound source arrives at the listening position in phase, preventing unwanted distortion and/or coloring of the sound. Phase Control technology provides coherent sound reproduction through the use of phase matching for an optimal sound image. The default setting is on and we recommend leaving Phase Control switched on for all sound sources.

- Press PHASE (PHASE CONTROL) to switch on phase correction.
   - The PHASE CONTROL indicator on the front panel lights.

**Notes**

- Phase matching is a very important factor in achieving proper sound reproduction. If two waveforms are ‘in phase’, they crest and trough together, resulting in increased amplitude, clarity and presence of the sound signal. If a crest of a wave meets a trough, then the sound will be ‘out of phase’ and an unreliable sound image will be produced.
- For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. Phase Control Plus function corrects for phase shifting on such discs. For instructions on setting the Phase Control Plus, see Setting the Audio options on page 65.
- If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0º). However, the effect you can actually feel when PHASE CONTROL is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.
- Set the built-in lowpass filter switch of your subwoofer to off. If this cannot be done on your subwoofer, set the cutoff frequency to a higher value.
- If the speaker distance is not properly set, you may not have a maximized PHASE CONTROL effect.
- The PHASE CONTROL mode cannot be set to ON in the following cases:
  - When headphones are plugged in.
  - When the PURE DIRECT mode is switched on.
  - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 65.

Introduction
This receiver is equipped with the LAN terminal and you can enjoy the following features by connecting your components to these terminals.

Listening to Internet radio stations
You can select and listen to your favorite Internet radio station from the list of Internet radio stations created, edited, and managed by the vTuner database service exclusively for use with the Pioneer products.

→ See Playback with Network functions on page 56 and Listening to Internet radio stations on page 56.

Playback the music files stored in PCs
You can playback a lot of music files stored in your PCs using this unit.
• Besides a PC, you can also play back audio files stored on your other components with the built-in media server function based on DLNA 1.0 or DLNA 1.5 framework and protocols (i.e. network-capable hard disks and audio systems).
→ See Playback with Network functions on page 56 and Playing back audio files stored on components on the network on page 57.

Listening to Pandora Internet Radio
→ See Listening to Pandora Internet Radio on page 57.

Notes
• To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand.
• Photo or video files cannot be played back.
• With Windows Media Player 11 or Windows Media Player 12, DRM-protected audio files cannot be played back on this receiver.

About playable DLNA network devices
This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:
• PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
• PCs running Microsoft Windows 7 with Windows Media Player 12 installed
• DLNA-compatible digital media servers (on PCs or other components)
Files stored in a PC or DMS (Digital Media Server) as described above can be played via command from an external Digital Media Controller (DMC). Devices controlled by this DMC to play files are called DMRs (Digital Media Renderers). This receiver supports this DMR function. When in the DMR mode, such operations as playing and stopping files can be performed from the external controller. Volume adjustment and the muting control are also possible. The DMR mode is canceled if the remote control unit is operated while in the DMR mode (aside from certain buttons, including the VOLUME +/-, MUTE and DISP).
• Depending on the external controller being used, playback may be interrupted when the volume is adjusted from the controller. In this case, adjust the volume from the receiver or remote control.

Using AirPlay on iPod touch, iPhone, iPad, and iTunes
AirPlay works with iPhone, iPod, and iPad touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion, and Mac and PC with iTunes 10.2.2 or later.
To use AirPlay, select your receiver on your iPod touch, iPhone, iPad or in iTunes. *1
The receiver’s input will switch automatically to AirPlay when AirPlay is in use. *2
The following operations can be performed when in AirPlay mode:
• Adjustment of the receiver’s volume from iPod touch, iPhone, iPad or iTunes.
• Pause/resume, next/previous track, and shuffle/repeat from the remote control of the receiver. *3
• Display of the currently playing track information on the receiver’s display, including artist, song and album name.
*1: For more information, see the Apple website (http://www.apple.com).
*2: The receiver’s power automatically turns on when Network Standby at Network Setup is set to ON.
*3: If operation is not possible, press NET, then operate again.

Notes
• A network environment is required to use AirPlay.
• The receiver’s name that shows up in the AirPlay UI on iPod touch, iPhone, iPad and iTunes can be changed by Friendly Name from Network Setup.
• AirPlay provided on this receiver has been developed and tested based on the software versions for the iPod, iPhone, iPad and the software versions for iTunes that are indicated on the Pioneer website. AirPlay may not be compatible with iPod, iPhone, iPad or iTunes software versions other than those indicated on the Pioneer website.

About the DHCP server function
To play back audio files stored on components on the network or listen to Internet radio stations, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See Network Setup menu on page 98 for more on this.

Authorizing this receiver
This receiver must be authorized to enable playback. This happens automatically when the receiver makes a connection over the network to the PC. If not, please authorize this receiver manually on the PC. The authorization (or permission) method for access varies depending on the type of server currently being connected. For more information on authorizing this receiver, refer to the instruction manual of your server.
About HTC Connect
This receiver features “HTC Connect”, a simple way to enjoy music content from your HTC Connect certified smartphone.
1 HTC Connect music streaming provided on this product has been developed based on interoperability testing as defined by the HTC Connect Certification program with the HTC Connect-compatible smartphones.
2 Music Navigation via the music progress bar is not currently supported with HTC Connect.
3 Third party music applications (those other than HTC’s pre-installed “Music” app) have not been tested for compatibility and may not work. HTC Connect has been tested with MP3, AAC, WMA and WAV encoding formats. Other formats may not be compatible.
4 High network congestion may interfere with the operation of HTC Connect.

HTC Connect Certified Smartphones
The HTC Connect-compatible smartphones, Please check Pioneer website for up to date information about compatible devices and audio format support.
http://www.pionerelectronics.com/htc (for USA)
http://www.pionerelectronics.ca/htc (for Canada)

Notes
• Specifications and design subject to modification without notice.
• HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.

Playback with Network functions

Important
• About one minute is required between turning the power on and completion of startup.
• When you play back audio files, “Connecting...” is displayed before playback starts. The display may continue for several seconds depending on the type of file.
• In case a domain is configured in a Windows network environment, you cannot access a PC on the network while you are logged onto the domain. Instead of logging onto the domain, log onto the local machine.
• There are cases where the time elapsed may not be correctly displayed.

Press NET repeatedly to select the category you want to play back.
It may take several seconds for this receiver to access the network.
Select a category from the following list:
• INTERNET RADIO – Internet radio
  — When INTERNET RADIO is selected, the radio station that was playing last time is played.
• PANDORA – Internet radio that supports Pandora
• MEDIA SERVER – Server components on the network
• FAVORITES – Favorite songs currently being registered

Depending on the selected category, the names of folders, files, and Internet radio stations are displayed.

Use †/ ‡ to select the folder, music files or Internet radio station to play back, and then press ENTER.
Press †/ ‡ to scroll up and down the list and select the desired item. When you press ENTER, playback starts with the playback screen being displayed for the selected item. To return to the list screen, press RETURN.
When the list screen is displayed from the playback screen, the playback screen reappears automatically if no operation is performed for 10 seconds while the list screen is displayed.
Only audio files with the ⊗ mark can be played. In case of the folders with the ⊘ mark, use †/ ‡ and ENTER to select the desired folder and audio files.
• When † or ‡ is pressed at the list screen, the page switches.

Listening to Internet radio stations
Internet radio is an audio broadcasting service transmitted via the Internet. There are a large number of Internet radio stations broadcasting a variety of services from every corner of the world. Some are hosted, managed, and broadcast by private individuals while others are by the corresponding traditional terrestrial radio stations or radio networks. Whereas terrestrial, or OTA (over-the-air), radio stations are geographically restricted on the range of radio waves broadcast from a transmitter through the air, Internet radio stations are accessible from anywhere in the world, as long as there is a connection to the Internet, as services are not transmitted through the air but are delivered over the World Wide Web. On this receiver you can select Internet radio stations by genre as well as by region.
Depending on the Internet line conditions, the sound may not be smooth when playing Internet radio.

About list of Internet radio
The list of Internet radio stations on this receiver is created, edited, and managed by the vTuner database service exclusively for use with this receiver. For details about vTuner, see vTuner on page 110.

3 Repeat step 2 to play back the desired song.
For detailed operating instructions, refer to the section shown below.
• Internet radio stations – See Listening to Internet radio stations on page 56.
• Pandora – See Listening to Pandora Internet Radio on page 57.
• Media server – See Playing back audio files stored on components on the network on page 57.
• Favorites – See Playing back your favorite songs on page 57.

Basic playback controls
You can perform the following operations with the remote control of this receiver. Note that some buttons are not available for operation depending on the category currently being played back.
• Press NET to switch the remote control to the network operation mode.

Listening to Pandora Internet Radio
Playing back your favorite songs
Playing back audio files stored on components on the network
Listening to Internet radio stations
About list of Internet radio
Saving and retrieving Internet radio stations

You can easily save and retrieve saved Internet radio stations. See Playing back your favorite songs on page 57 for more on this.

- To listen to Internet radio stations, you must have high-speed broadband Internet access. With a 56 K or ISDN modem, you may not enjoy the full benefits of Internet radio.
- The port number varies depending on the Internet radio station. Check the firewall settings.
- A list of Internet radio stations provided by the vTuner database service is subject to change or deletion without notice due to various reasons.
- Broadcasts may be stopped or interrupted depending on the Internet radio station. In this case, you cannot listen to a radio station selected from the list of Internet radio stations.

Registering broadcast stations not on the vTuner list from the special Pioneer site

With the receiver, broadcast stations not included on the list of station distributed by vTuner can be registered and played. Check the access code required for registration on the receiver, use this access code to access the special Pioneer Internet radio site and register the desired broadcast stations in your favorites. The address of the special Pioneer Internet radio site is:
http://www.radio-pioneer.com

1 Display the Internet Radio list screen.
To display the Internet Radio list screen, perform step 1 at Playback with Network functions on page 56.

2 Use Ô/Õ to select ‘Help’, then press ENTER.

3 Use Ô/Õ to select ‘Get access code’, then press ENTER. The access code required for registration on the special Pioneer Internet radio site is displayed. Make a memo of this address. The following can be checked on the Help screen:
- Get access code – The access code required for registration on the special Pioneer Internet radio site is displayed.
- Show Your WebID/PW – After registering on the special Pioneer Internet radio site, the registered ID and password are displayed.
- Reset Your WebID/PW – Resets all the information registered on the special Pioneer Internet radio site. When reset, all the registered broadcast stations are also cleared. If you want to listen to the same stations, re-register after resetting.

4 Access the special Pioneer Internet radio site from your computer and perform the registration process.
http://www.radio-pioneer.com
Access the above site and use the access code in step 3 to perform user registration, following the instructions on the screen.

5 Register the desired broadcast stations as your favorites, following the instructions on the computer’s screen.
Both broadcast stations not on the vTuner list and stations on the vTuner list can be registered. In this case they are registered on the receiver as favorite broadcast stations and can be played.

Listening to Pandora Internet Radio

Pandora is personalized internet radio that is designed to help you discover new music you’ll love mixed in with music you already know.
For details, check the website: http://www.pandora.com
- You must have a registered account in order to listen to songs using Pandora Internet Radio.
- Select PANDORA, then follow the instructions on the screen to make the account settings.
- As of February 2013, the Pandora service is only offered in the United States.
- Some functions may be changed at Pandora’s discretion.

Notes
- When disposing of the product, we recommend you reset it to delete the data. See Resetting the system on page 77.
- Pandora®, the leading internet radio service, gives people music they love anytime, anywhere, through personalized radio stations.

Inputting characters using the software keyboard

1 Press TOOLS to the software keyboard operation mode.
2 Use Ô/Õ/«/» to select letters or symbols, then press ENTER. Repeat this until all the desired characters have been input.
3 Select ‘OK’ on the software keyboard, then press ENTER.
- To quit inputting characters using the software keyboard, press the TOOLS button.

Playing back audio files stored on components on the network

This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored in the following devices:
- PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
- PCs running Microsoft Windows 7 with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)

Playing back your favorite songs

Up to 64 favorite tracks on the media server and/or Internet radio stations can be registered in the Favorites folder. Note that only the audio files stored on components on the network can be registered.

Registering and deleting audio files and Internet radio stations in and from the Favorites folder

1 Press NET repeatedly to select the INTERNET RADIO or MEDIA SERVER.
2 With the track or Internet radio station you want to register selected, press +Favorite. The selected song or Internet radio station is then registered in the Favorite.

Note
To delete tracks or Internet radio stations that have been registered, set the input to FAVORITES, select the track or station to be deleted, then press the CLR button.
About network playback
The network playback function of this unit uses the following technologies:

Windows Media Player
See Windows Media Player 11/Windows Media Player 12 on page 110 for more on this.

DLNA

DLNA CERTIFIED™ Audio Player
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.5.

When a PC running DLNA server software or other DLNA compatible device is connected to this player, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

DLNA™, the DLNA Logo and DLNA CERTIFIED™ are trademarks, service marks, or certification marks of the Digital Living Network Alliance.

Content playable over a network
- Even when encoded in a compatible format, some files may not play correctly.
- Movie or Photo files cannot be played back.
- There are cases where you cannot listen to an Internet radio station even if the station can be selected from a list of radio stations.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit. For more information check with the manufacturer of your server.

Disclaimer for Third Party Content
ACCESS TO THIRD PARTY CONTENT SERVICES, INCLUDING ALL ASSOCIATED FEATURES AND FUNCTIONALITIES, IS PROVIDED “AS IS,” “AS AVAILABLE” AND AT THE USER’S OWN RISK. PIONEER DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, IN CONNECTION WITH ACCESS TO AND USE OF CONTENT SERVICES THROUGH THIS DEVICE, INCLUDING WITHOUT LIMITATION WARRANTIES OF MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. PIONEER DOES NOT GUARANTEE, REPRESENT, OR WARRANT THAT CONTENT SERVICES WILL BE FREE FROM ERRORS, INTERRUPTION, LOSS, CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, OR OTHER SECURITY INTRUSION, AND PIONEER DISCLAIMS ANY LIABILITY IN CONNECTION WITH THE FOREGOING. PIONEER IS NOT LIABLE OR RESPONSIBLE FOR ANY LOSS OR DAMAGE ARISING FROM ACCESS TO OR USE OF CONTENT. NO ORAL OR WRITTEN INFORMATION OR ADVICE GIVEN BY PIONEER OR ITS CUSTOMER SERVICES REPRESENTATIVES WILL CREATE ANY SUCH WARRANTY.

IN NO EVENT WILL PIONEER, ITS AFFILIATES, OR THEIR RESPECTIVE OFFICERS, DIRECTORS, OR EMPLOYEES BE LIABLE IN CONNECTION WITH YOUR USE OF THIRD PARTY CONTENT SERVICES THROUGH THIS DEVICE FOR PERSONAL INJURY OR SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, INCLUDING WITHOUT LIMITATION DAMAGES FOR ATTORNEY’S FEES, LOST DATA OR LOST PROFITS, REGARDLESS OF THE THEORY OF LIABILITY AND WHETHER OR NOT ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT WILL PIONEER’S TOTAL LIABILITY TO YOU FOR ALL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIRD PARTY CONTENT SERVICES (OTHER THAN AS MAY BE REQUIRED BY LAW IN CASES INVOLVING PERSONAL INJURY) EXCEED $10.00. THE FOREGOING LIMITATIONS WILL APPLY EVEN IF THE ABOVE REMEDY FAILS OF ITS ESSENTIAL PURPOSE. IF ANY APPLICABLE AUTHORITY HOLDS ANY PORTION OF THIS SECTION TO BE UNENFORCEABLE, THEN LIABILITY WILL BE LIMITED TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW.

About playback behavior over a network
- Playback may stall when the PC is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 100BASE-TX connection between player and PC is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected PC and the setting of such software, network connection may be blocked.

Pioneer is not responsible for any malfunction of the player and/or the NETWORK features due to communication error/malfunctions associated with your network connection and/or your PC, or other connected equipment. Please contact your PC manufacturer or Internet service provider.
This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc.
Microsoft, Windows, Windows Media and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
About playable file formats

The NETWORK feature of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats. Also, the compatibility of file formats varies depending on the type of server. Check with your server to ensure the compatibility of file formats supported by your server.

- Internet radio playback may be affected by the Internet communications environment, and in this case playback may not be possible even with the file formats listed here.
- With WAV, FLAC, AIFF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.
- Gapless playback is not possible when the format is being converted (transcoded) by the server.
- Gapless playback is not possible in the DMR mode.

- b Files encoded using Windows Media Codec 9 may be playable but some parts of the specification are not supported; specifically, Pro, Lossless, Voice.
- c Uncompressed FLAC files are not supported. Pioneer does not guarantee playback.
Control with HDMI function

About the Control with HDMI function ................................................................. 61
Making Control with HDMI connections ............................................................. 61
HDMI Setup ....................................................................................................... 61
Before using synchronization .............................................................................. 62
About synchronized operations ........................................................................... 62
Setting the PQLS function ................................................................................ 62
About Sound Retriever Link and Stream Smoother Link ................................... 62
Cautions on the Control with HDMI function .................................................... 63
About the Control with HDMI function

Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.
- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

Important
- With Pioneer devices, the Control with HDMI functions are referred to as “KURO LINK”.
- You cannot use this function with components that do not support Control with HDMI.
- We only guarantee this receiver will work with Pioneer Control with HDMI-compatible components. However, we do not guarantee that all synchronized operations will work with components that support the Control with HDMI function.
- Use a High Speed HDMI®/TM cable when you want to use the Control with HDMI function. The Control with HDMI function may not work properly if a different type of HDMI cable is used.
- For details about concrete operations, settings, etc., refer also to the operating instructions for each component.

Making Control with HDMI connections

You can use synchronized operation for a connected TV and other components.
- Be sure to connect the TV’s audio cable to the audio input of this unit. When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV is input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 61). For details, see Connecting your TV and playback components on page 26.

Important
- When connecting this system or changing connections, be sure to switch the power off and disconnect the power cord from the wall socket. After completing all connections, connect the power cords to the wall socket.
- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. You cannot carry out any operations during this process. The HDMI indicator in the front panel display blinks during this process, and you can turn on this receiver once it has stopped blinking. When you set the Control with HDMI to OFF, you can skip this process. For details about the Control with HDMI feature, see Control with HDMI function on page 60.
- To get the most out of this function, we recommend that you connect your HDMI component not to a TV but rather directly to the HDMI terminal on this receiver.
- The Control with HDMI function can be used with a TV connected to the HDMI OUT 1 terminal, but not with a TV connected to the HDMI OUT 2 terminal.

HDMI Setup

You must adjust the settings of this receiver as well as the connected Control with HDMI-compatible components in order to make use of the Control with HDMI function. For more information see the operating instructions for each component.

1 Press RECEIVER on the remote control, then press HOME MENU.
2 Select ‘System Setup’, then press ENTER.
3 Select ‘HDMI Setup’, then press ENTER.
4 Select the ‘Control’ setting you want.
Choose whether to set this unit’s Control with HDMI function ON or OFF. You will need to set it to ON to use the Control with HDMI function.
- When using a component that does not support the Control with HDMI function, set this to OFF.
  - ON – Enables the Control with HDMI function. Set Control Mode, ARC and PQLS in the subsequent setting items to the desired values.
  - OFF – The Control with HDMI is disabled. The Control Mode, ARC and PQLS functions in the subsequent setting items cannot be used.
5 Select the ‘Control Mode’ setting you want.
Choose whether you want to enable synchronized operations.
- ON – Enabled for the synchronized operations.
- OFF – The synchronized operations disabled.
6 Select the ‘ARC’ setting you want.
When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT 1 terminal. After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
- ON – The TV’s sound is input via the HDMI terminal.
- OFF – The TV’s sound is input from the Audio input terminals other than HDMI inputs.
7 Select the ‘PQLS’ setting you want.
Choose whether to set this unit’s PQLS function AUTO or OFF.
For details about PQLS function, see Setting the PQLS function on page 62.
- AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.
- OFF – PQLS is disabled.
8 Select the ‘Standby Through’ setting you want.
It is possible to transfer signals from an HDMI-connected player to the TV when this receiver’s power is on standby. Select the HDMI input whose HDMI signal is to be input for through transfer when in the standby mode. When Last is selected, the signal being input to the currently selected HDMI input is transferred. When OFF is selected, no HDMI input is transferred when in the standby mode. (However, when Control is set to ON, the HDMI signal is transferred through by the Control with HDMI function even in the standby mode.)
- When anything other than OFF is set for this setting, the receiver’s HDMI input can be switched even when the receiver is in the standby mode. (Switch by pointing the remote control at the receiver and pressing the HDMI BD, DVD, SAT/CBL or DVR/BDR button.)
- Setting to anything other than OFF increases power consumption in the standby mode.
- This setting can be used even with devices that are not compatible with the Control with HDMI function.
- The Standby Through function cannot be used with MHL-compatible devices.
9 When you’re finished, press HOME MENU.
Before using synchronization

Once you have finished all connections and settings, you must:

1. Put all components into standby mode.
2. Turn the power on for all components, with the power for the TV being turned on last.
3. Choose the HDMI input to which the TV is connected to this receiver, and see if video output from connected components displays properly on the screen or not.
4. Check whether the components connected to all HDMI inputs are properly displayed.

About synchronized operations

Important

- Synchronized operations are enabled when Control Mode is set to ON after setting Control in HDMI Setup to ON. For details, see HDMI Setup on page 61.
- The Control with HDMI-compatible component connected to the receiver operates in sync as described below.
- From the menu screen of the Control with HDMI-compatible TV, set audio to be played through this receiver, and the receiver will switch to the synchronized amp mode.
- When in the synchronized amp mode, you can adjust the receiver’s volume or mute the sound using the TV’s remote control.
- When in the synchronized amp mode, the synchronized amp mode is canceled when the receiver’s power is turned off. To turn the synchronized amp mode back on, set audio to be played through the receiver from the TV’s menu screen, etc. This receiver will power up and switch to the synchronized amp mode.
- When the synchronized amp mode is canceled, the receiver’s power turns off if you were viewing an HDMI input or a TV program on the TV.
- When in the synchronized amp mode, the synchronized amp mode is canceled if an operation that produces sound from the TV is performed from the TV’s menu screen, etc.
- When the TV’s power is set to standby, the receiver’s power is also set to standby. (Only when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV.)
- The receiver’s input switches automatically when the Control with HDMI-compatible component is played.
- The receiver’s input switches automatically when the TV’s input is switched.
- The synchronized amp mode remains in effect even if the receiver’s input is switched to a component other than one connected by HDMI.

The operations below can also be used on Pioneer Control with HDMI-compatible TVs.

- When the receiver’s volume is adjusted or the sound is muted, the volume status is displayed on the TV’s screen.
- When the OSD language is switched on the TV, the receiver’s language setting also switches accordingly.

Setting the PQLS function

PQLS (Precision Quartz Lock System) is a digital audio signal transfer control technology using the Control with HDMI function. It offers higher-quality audio playback by controlling audio signals from the receiver to a PQLS compatible player, etc. This enables removing jitters that have a negative effect on the quality of the sound and is generated upon transmission.

- On players compatible with PQLS Bit-stream, PQLS always works for all sources.
- On players compatible with PQLS Multi Surround, PQLS works for all sources. Set the player’s audio output to Linear PCM.
- On players compatible with PQLS 2 ch Audio, PQLS only works when playing CDs.

Please refer to the operating instructions supplied with your player for more information.

This function is activated when Control is set to ON.

Tip

- The PQLS setting is set at PQLS in HDMI Setup on the HOME MENU, but the setting can also be switched with the remote control, as described below.
- Press PQLS to select the PQLS setting.

The setting is displayed on the front panel display.

- PQLS AUTO – PQLS is enabled. A precision quartz controller in this receiver eliminates distortion caused by timing errors (jitter), giving you the best possible digital-to-analog conversion when you use the HDMI interface. This is valid as an HDMI function for PQLS-compatible players.
- PQLS OFF – PQLS is disabled.

About Sound Retriever Link and Stream Smoother Link

These are automatic functions allowing you to output optimum audio and video signals from the receiver using the Control with HDMI function. When a player supporting the respective function is connected to the receiver by HDMI, the sound/picture is optimized for the compressed audio/video file played on the player.

- Depending on the compressed audio/video file format, it may not be operated automatically.

Sound Retriever Link

When playing a compressed audio file on the player, the file’s bitrate information is acquired using the Control with HDMI function, and the sound is optimized on the receiver based on this information. To activate the Sound Retriever Link function, make the setting below.

1. Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON. See HDMI Setup on page 61.
2. Set the S.RTRV (Auto Sound Retriever) setting to ON. See Setting the Audio options on page 66.

Stream Smoother Link

Using the Control with HDMI function, the receiver automatically detects whether a compressed video file is being played on the player, and if so automatically activates the Stream Smoother function. To activate the Stream Smoother Link function, make the setting below.

1. Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON. See HDMI Setup on page 61.
2. Set the STREAM (Stream Smoother) setting to AUTO. See Setting the Video options on page 67.
Cautions on the Control with HDMI function

- Connect the TV directly to this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.

- Only connect components (Blu-ray Disc player, etc.) you intend to use as a source to the HDMI input of this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.

- When the receiver’s Control is turned ON, even if the receiver’s power is in the standby mode, it is possible to output the audio and video signals from a player via HDMI to the TV without producing sound from the receiver, but only when a Control with HDMI-compatible component (Blu-ray Disc player, etc.) and compatible TV are connected. In this case, the receiver’s power turns on and the power and HDMI indicators light.

- If the Control setting is not set to OFF, the power consumption during standby will increase.

Setting the Audio options

There are a number of additional sound settings you can make using the AUDIO PARAMETER menu. The defaults, if not stated, are listed in bold.

**Important**
- Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.

1. **Press RECEIVER** to the receiver operation mode, then press AUDIO PARAMETER.

2. **Use † / ‡** to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.

3. **Use ← / →** to set as necessary. See the table below for the options available for each setting.

4. **Press RETURN** to confirm and exit the menu.

---

### Audio parameter menu

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
<th>Option(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MCACC</strong>&lt;br&gt;(MCACC preset)</td>
<td>Selects your favorite MCACC preset memory when multiple preset memories are saved. When an MCACC preset memory has been renamed, the given name is displayed.</td>
<td>M1, MEMORY 1 to M6, MEMORY 6&lt;br&gt;Default: M1, MEMORY 1</td>
</tr>
<tr>
<td><strong>EQ</strong>&lt;br&gt;(Acoustic Calibration EQ)</td>
<td>Switches on/off the effects of EQ Pro.</td>
<td>ON&lt;br&gt;OFF</td>
</tr>
<tr>
<td><strong>S-WAVE</strong>&lt;br&gt;(Standing Wave)</td>
<td>Switches on/off the effects of Standing Wave Control.</td>
<td>ON&lt;br&gt;OFF</td>
</tr>
<tr>
<td><strong>Phase C+</strong>&lt;br&gt;(Phase Control Plus)</td>
<td>For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function corrects for phase shifting on such discs. This function is particularly effective when playing multi-channel music containing low frequency effects (LFE). When AUTO is selected, not only the low range delay but also the polarity and correlation are detected to achieve the optimum effect.</td>
<td>AUTO/0 to 16 (ms)&lt;br&gt;Default: AUTO</td>
</tr>
<tr>
<td><strong>DELAY</strong>&lt;br&gt;(Sound Delay)</td>
<td>Some monitors have a slight delay when showing video, so the soundtrack will be slightly out of sync with the picture. By adding a bit of delay, you can adjust the sound to match the presentation of the video.</td>
<td>0 to 800 (ms)&lt;br&gt;Default: 0</td>
</tr>
<tr>
<td><strong>TONE</strong>&lt;br&gt;(Tone Control)</td>
<td>Applies the treble and bass tone controls to a source, or bypasses them completely. This setting is only displayed when the listening mode is STEREO. Auto surround (STEREO) or SOUND RETRIEVER AIR.</td>
<td>BYPASS&lt;br&gt;ON</td>
</tr>
<tr>
<td><strong>BASS</strong>&lt;br&gt;&lt;c/&gt;</td>
<td>Adjusts the amount of bass.</td>
<td>-6 to +6 (dB)&lt;br&gt;Default: 0 (dB)</td>
</tr>
<tr>
<td><strong>TREBLE</strong>&lt;br&gt;&lt;c/&gt;</td>
<td>Adjusts the amount of treble.</td>
<td>-6 to +6 (dB)&lt;br&gt;Default: 0 (dB)</td>
</tr>
<tr>
<td><strong>S.RTRV</strong>&lt;br&gt;(Auto Sound Retriever)</td>
<td>With the Auto Sound Retriever function, DSP processing is used to compensate for the loss of audio data upon compression, improving the sound’s sense of density and modulation. Also, when a player supporting the Sound Retriever Link function is connected to the receiver by HDMI, by setting this to ON, the bit rate information of the compressed audio file being played on the player is acquired using the Control with HDMI function, and the sound is optimized based on this information (Sound Retriever Link).</td>
<td>OFF&lt;br&gt;ON</td>
</tr>
<tr>
<td><strong>DNR</strong>&lt;br&gt;(Digital Noise Reduction)</td>
<td>May improve the quality of sound in a noisy source (for example, video tape with lots of background noise) when switched on. This only has an effect with 2-channel signal inputs. This mode is effective for contents with a sampling frequency of 48 kHz or less.</td>
<td>OFF&lt;br&gt;ON</td>
</tr>
<tr>
<td><strong>DIALOG E</strong>&lt;br&gt;(Dialog Enhancement)</td>
<td>Localizes dialog in the center channel to make it stand out from other background sounds in a TV or movie soundtrack. By moving from UP1 through UP2 and UP3 up to UP4, you can make the sound source seem to relocate upwards.</td>
<td>OFF/FLAT/UP1/UP2/UP3/UP4&lt;br&gt;Default: OFF</td>
</tr>
<tr>
<td><strong>Hi-bit24</strong></td>
<td>Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. 16- and 20-bit PCM as well as compressed audio is requantized to 24 bits, more subtle musical expression. This mode is effective for contents with a sampling frequency of 48 kHz or less.</td>
<td>OFF&lt;br&gt;ON</td>
</tr>
<tr>
<td><strong>PQSL</strong>&lt;br&gt;(Precision Quartz Lock System)</td>
<td>Switches the PQSL function between AUTO and OFF (Setting the PQSL function on page 60).</td>
<td>AUTO&lt;br&gt;OFF</td>
</tr>
<tr>
<td><strong>DUAL</strong>&lt;br&gt;(Dual Mono)</td>
<td>Specifies how dual mono encoded Dolby Digital soundtracks should be played. Dual mono is not widely used, but is sometimes necessary when two languages need to be sent to separate channels.</td>
<td>CH1 – Channel 1 is heard only&lt;br&gt;CH2 – Channel 2 is heard only&lt;br&gt;CH1 CH2 – Both channels heard from front speakers</td>
</tr>
<tr>
<td><strong>Fixed PCM</strong></td>
<td>This is useful if you find there is a slight delay before OFF recognizes the PCM signal on a CD, for instance. When ON is selected, noise may be output during playback of non-PCM sources. Please select another input signal if this is a problem.</td>
<td>OFF&lt;br&gt;ON</td>
</tr>
<tr>
<td><strong>DRC</strong>&lt;br&gt;(Dynamic Range Control)</td>
<td>Adjusts the level of dynamic range for movie soundtracks optimized for Dolby Digital, DTS, Dolby Digital Plus, Dolby TrueHD, DTS-HD and DTS-HD Master Audio (you may need to use this feature when listening to surround sound at low volumes).</td>
<td>AUTO&lt;br&gt;MID&lt;br&gt;OFF</td>
</tr>
<tr>
<td><strong>Loud Mgmt</strong>&lt;br&gt;(Loudness Management)</td>
<td>Adjusts the level of dynamic range for movie soundtracks optimized for Dolby TrueHD (you may need to use this feature when listening to surround sound at low volumes). This can only be set when DRC is set to OFF and the input signal is a Dolby TrueHD signal.</td>
<td>OFF&lt;br&gt;ON</td>
</tr>
</tbody>
</table>

---

**Note:**
- The default setting is indicated in bold. 
- The PQLS function is acquired using the PQLS function between AUTO and OFF (Setting the PQLS function on page 60). 
- The bit rate information of the compressed audio file being played on the player is acquired using the Control with HDMI function, and the sound is optimized based on this information (Sound Retriever Link). 
- May improve the quality of sound in a noisy source (for example, video tape with lots of background noise) when switched on. This only has an effect with 2-channel signal inputs. This mode is effective for contents with a sampling frequency of 48 kHz or less. 
- Localizes dialog in the center channel to make it stand out from other background sounds in a TV or movie soundtrack. By moving from UP1 through UP2 and UP3 up to UP4, you can make the sound source seem to relocate upwards. 
- Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. 16- and 20-bit PCM as well as compressed audio is requantized to 24 bits, more subtle musical expression. This mode is effective for contents with a sampling frequency of 48 kHz or less. 
- Switches the PQSL function between AUTO and OFF (Setting the PQSL function on page 60). 
- Specifies how dual mono encoded Dolby Digital soundtracks should be played. Dual mono is not widely used, but is sometimes necessary when two languages need to be sent to separate channels. 
- This is useful if you find there is a slight delay before OFF recognizes the PCM signal on a CD, for instance. When ON is selected, noise may be output during playback of non-PCM sources. Please select another input signal if this is a problem. 
- Adjusts the level of dynamic range for movie soundtracks optimized for Dolby Digital, DTS, Dolby Digital Plus, Dolby TrueHD, DTS-HD and DTS-HD Master Audio (you may need to use this feature when listening to surround sound at low volumes). This can only be set when DRC is set to OFF and the input signal is a Dolby TrueHD signal.
### Setting | What it does | Option(s)
--- | --- | ---
LFE (LFE Attenuator) | Some audio sources include ultra-low bass tones. Set the LFE attenuator as necessary to prevent the ultra-low bass tones from distorting the sound from the speakers. The LFE is not limited when set to 0 dB, which is the recommended value. When set to -5 dB, -10 dB, -15 dB or -20 dB, the LFE is limited by the respective degree. When OFF is selected, no sound is output from the LFE channel. | OFF, -10 dB, -15 dB, -20 dB, Default: 0 dB |
INPUT ATT (Input attenuator) | If the sound is distorted, this can be used to lower the input signal level and reduce the distortion. | OFF, ON, AMP, THROUGH |
HDMI (HDMI Audio) | Specifies the routing of the HDMI audio signal out of this receiver (amp) or through to a TV. When THROUGH is selected, no sound is output from this receiver. | OFF, THROUGH, ON |
A.DELAY (Auto delay) | This feature automatically corrects the audio-to-video delay between components connected with an HDMI cable. The audio delay time is set depending on the operational status of the display connected with an HDMI cable. The video delay time is automatically adjusted according to the audio delay time, if necessary. | OFF, ON |
C.WIDTH (Center Width) (Applicable only when using a center speaker) | Provides a better blend of the front speakers by spreading the center channel between the front right and left speakers, making it sound wider (higher settings) or narrower (lower settings). | 0 to 7 (Default: 3) |
C.GAIN (Center Gain) (Applicable only when using a center speaker) | Adjusts the center gain to create a wider stereo effect with vocals. Adjust the effect from 0 (all center channel sent to front right and left speakers) to 1.0 (center channel sent to center speaker only). | 0 to 1.0 (Default: NeoX CINEMA: 1.0, NeoX MUSIC: 0.3, NeoX GAME: 1.0) |
EFFECT | Sets the effect level for the ALC mode. | 10 to 90 (Default: 50) |
H.GAIN (Height Gain) | Adjusts the output from the front height speaker when listening in Pro Logic IIz HEIGHT mode. If set to HIGH, the sound from the top will be more emphasized. | LOW, MID, HIGH |
V.SPs (Virtual Speakers) | When AUTO is selected, the sound field is created with the surround back, front height and front wide channels whose Speaker Setting is set to NO automatically complemented. To set the respective channels individually, select MANUAL. | MANUAL, AUTO |
V.SB (Virtual Surround Back) | When you’re not using surround back speakers, select this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information. | OFF, ON |
V.HEIGHT (Virtual Height) | When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers. | OFF, ON |
V.WIDE (Virtual Wide) | When you're not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers. This improves the continuity of the sound from the front channel to the surround channels. | OFF, ON |
V.DEPTH (Virtual Depth) | When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence. | OFF, MIN, M ID, MAX |

**Setting | What it does | Option(s)**
--- | --- | ---
LFE (LFE Attenuate) | Some audio sources include ultra-low bass tones. Set the LFE attenuator as necessary to prevent the ultra-low bass tones from distorting the sound from the speakers. The LFE is not limited when set to 0 dB, which is the recommended value. When set to -5 dB, -10 dB, -15 dB or -20 dB, the LFE is limited by the respective degree. When OFF is selected, no sound is output from the LFE channel. | OFF, -10 dB, -15 dB, -20 dB, Default: 0 dB |
INPUT ATT (Input attenuate) | If the sound is distorted, this can be used to lower the input signal level and reduce the distortion. | OFF, ON |
HDMI (HDMI Audio) | Specifies the routing of the HDMI audio signal out of this receiver (amp) or through to a TV. When THROUGH is selected, no sound is output from this receiver. | OFF, THROUGH, ON |
A.DELAY (Auto delay) | This feature automatically corrects the audio-to-video delay between components connected with an HDMI cable. The audio delay time is set depending on the operational status of the display connected with an HDMI cable. The video delay time is automatically adjusted according to the audio delay time, if necessary. | OFF, ON |
C.WIDTH (Center Width) (Applicable only when using a center speaker) | Provides a better blend of the front speakers by spreading the center channel between the front right and left speakers, making it sound wider (higher settings) or narrower (lower settings). | 0 to 7 (Default: 3) |
C.GAIN (Center Gain) (Applicable only when using a center speaker) | Adjusts the center gain to create a wider stereo effect with vocals. Adjust the effect from 0 (all center channel sent to front right and left speakers) to 1.0 (center channel sent to center speaker only). | 0 to 1.0 (Default: NeoX CINEMA: 1.0, NeoX MUSIC: 0.3, NeoX GAME: 1.0) |
EFFECT | Sets the effect level for the ALC mode. | 10 to 90 (Default: 50) |
H.GAIN (Height Gain) | Adjusts the output from the front height speaker when listening in Pro Logic IIz HEIGHT mode. If set to HIGH, the sound from the top will be more emphasized. | LOW, MID, HIGH |
V.SPs (Virtual Speakers) | When AUTO is selected, the sound field is created with the surround back, front height and front wide channels whose Speaker Setting is set to NO automatically complemented. To set the respective channels individually, select MANUAL. | MANUAL, AUTO |
V.SB (Virtual Surround Back) | When you’re not using surround back speakers, select this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information. | OFF, ON |
V.HEIGHT (Virtual Height) | When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers. | OFF, ON |
V.WIDE (Virtual Wide) | When you're not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers. This improves the continuity of the sound from the front channel to the surround channels. | OFF, ON |
V.DEPTH (Virtual Depth) | When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence. | OFF, MIN, MID, MAX |

**a** The adjustment can be made only when TONE is set to ON.
**b** When ON is selected, the Sound Retriever effect is optimized based on the bitrate information of the contents input to the USB memory audio and INTERNET RADIO. PANDORA, MEDIA SERVER, FAVORITES (digital audio input only) to achieve high sound quality.
**c** With the iPod/USB INTERNET RADIO, PANDORA, MEDIA SERVER, FAVORITES or ADAPTER PORT input function, by default S.RTRV is set to ON.
**d** When ON is selected, optimum correction of the audio signals input via the HDMI OUT terminal is conducted with the HDMI ARC (Audio Return Channel) function, and the sound of digital TV broadcasts is produced with HD quality. This is valid when the input is set to TV and ARC in HDMI Setup is set to ON. (See HDMI Setup on page 14.)
**e** UP1 to UP4 can be selected only when the front height speaker is connected. The presence or absence of effects depends on the listening mode.
**f** The initially set AUTO is only available for Dolby TrueHD signals. Select MAX or MID for signals other than Dolby TrueHD.
**g** The attenuator isn’t available when using the Stream Direct (ANALOG DIRECT) modes.
**h** With the receiver’s power in the standby mode. See About synchronized operations on page 60.
**i** Only when listening to 2 channel sources in Dolby Pro Logic IIx Music/Dolby Pro Logic II Music mode. Only when listening to 2 channel sources in NeoX CINEMA/MUSIC/GAME mode.
**j** This can be set when MANUAL is selected for V.SPs.
**k** This mode is effective for contents with a sampling frequency of 48 kHz or less.
**l** This can be set when MANUAL is selected for V.SPs.
**m** This mode is effective for contents with a sampling frequency of 48 kHz or less.
Setting the Video options

There are a number of additional picture settings you can make using the VIDEO PARAMETER menu. The defaults, if not stated, are listed in bold.

Important
- The VIDEO PARAMETER menu settings only apply to the HDMI OUT 1 terminal’s signal.
- Note that if an option cannot be selected on the VIDEO PARAMETER menu, it is unavailable due to the current source, setting and status of the receiver.
- All of the setting items can be set for each input function.
- Setting items other than V.CONV can only be selected when V.CONV is set to ON.

1 Press RECEIVER to the receiver operation mode, then press VIDEO PARAMETER.
2 Use † / ‡ to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
3 Use ◄/► to set as necessary. See the table below for the options available for each setting.
4 Press RETURN to confirm and exit the menu.

#### Setting: ASP (Aspect) <g>
- Specifies the aspect ratio when input signals are output at the HDMI output. Make your desired settings while checking each setting on your display (if the image doesn’t match your monitor type, cropping or black bands appear).
- a. If the video picture deteriorates when this setting is switched ON, switch it OFF.
- b. When connected to a video device using the component video input, set this setting to ON and watch with the HDMI output.
- c. When set to a resolution with which the TV (monitor) is not compatible, no picture is output. Also, in some cases no picture will be output due to copyright protection signals. In this case, change the setting.
- d. Adjustment is not possible unless V.ADJ (Advanced Video Adjust) is set to MEMORY.
- e. This setting is only displayed when the video signals below are being input:
  - 480i, 576i, 480p, 576p, 720p, 1080i analog video signals
  - 480i, 576i, 480p, 576p, 720p, 1080i, 1080p, 1080p24 HDMI video signals
- f. This adjustment is only possible when 480 signals are being input from the composite video jacks.
- g. If the image doesn’t match your monitor type, adjust the aspect ratio on the source component or on the monitor.
- h. This setting is only displayed when 480i/p or 576i/p video signals are being input.
Using other functions

Switching the speaker terminals

If you selected Normal(SB/FH), Normal(SB/FW) or Speaker B at Speaker system setting on page 86, you can switch between speakers using the SPEAKERS button. If you selected Front Bi-Amp or ZONE 2, the button will simply switch your main speaker terminals on or off.

1 Press RECEIVER to the receiver operation mode.

2 Use SPEAKERS to select a speaker system setting.

As mentioned above, if you have selected Front Bi-Amp or ZONE 2, the button will simply switch your main speaker terminal (A) on or off.

Press repeatedly to choose a speaker terminal option:
When you select Normal(SB/FH), you can select from:
- SP: SB/FH ON – Surround back or front height channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output. The surround back and front height channels are switched automatically according to the audio input signal.
- SP: SB ON – Surround back channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- SP: FH ON – Front height channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- SP: OFF – No sound is output from the speakers (Pre-AMP mode).

When you select Normal(SB/FW), you can select from:
- SP: SB/FW ON – Surround back or front wide channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output. The surround back and front wide channels are switched automatically according to the audio input signal.
- SP: SB ON – Surround back channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- SP: FW ON – Front wide channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- SP: OFF – No sound is output from the speakers (Pre-AMP mode).

When you select Speaker B, you can select from:
- SP: A ON – Sound is output from the A-speaker terminals (up to 7 channels (including surround back channels), depending on the source);
- SP: B ON – Sound is output from the two speakers connected to the B-speaker terminals. Multichannel sources will not be heard.
- SP: A+B ON – Sound is output from the A-speaker terminals (up to 5 channels, depending on the source), the two speakers connected to the B-speaker terminals, and the subwoofer. The sound from the B-speaker terminals will be the same as the sound from the A-speaker terminals (multichannel sources will be downmixed to 2 channels).
- SP: OFF – No sound is output from the speakers (Pre-AMP mode).

Notes
- The subwoofer output depends on the settings you made in Manual speaker setup on page 86. However, if SP: B ON is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).
- All speaker systems (except Speaker B connections) are switched off when headphones are connected.

Using the MULTI-ZONE controls

The following steps use the front panel controls to adjust the sub zone volume and select sources. See ZONE 2 remote controls and HDZONE remote controls on page 70.

Important
- The settings must be change at ZONE Setup in order to use the HDZONE function (page 91).

1 Press the button on the front panel for the zone you want to operate (ZONE 2 ON/OFF or HDZONE ON/OFF).

The zone switches between on and off each time the button is pressed.

The MULTI-ZONE indicator lights when the MULTI-ZONE control has been switched ON.

2 Press MULTI-ZONE CONTROL on the front panel to select the sub zone(s) you want.

- When the receiver is on, make sure that any operations for the sub zone are done while ZONE and your selected sub zone(s) show in the display. If this is not showing, the front panel controls affect the main zone only.
- If the receiver is in standby, the display is dimmed, and ZONE and your selected sub zone(s) continue to show in the display.

3 Use the INPUT SELECTOR dial to select the source for the zone you have selected.

For example, ZONE 2 DVD sends the source connected to the DVD inputs to the primary (ZONE 2) sub room.
- If you select TUNER, you can use the tuner controls to select a preset station (see Saving station presets on page 47 if you’re unsure how to do this). The tuner cannot be tuned to more than one station at a time. Therefore, changing the station in one zone also changes the station in the other zone. Please be careful not to change stations when recording a radio broadcast.

4 Use the MASTER VOLUME dial to adjust the volume for the sub zone.

When Speaker System is set to anything other than ZONE 2, the volume output from the receiver’s AUDIO ZONE 2 OUT terminals can be fixed to -40 dB or 0 dB and the volume can be adjusted from the connected amplifier. If you want to adjust the volume from the connected amplifier, see ZONE Setup on page 91.

5 When you’re finished, press MULTI-ZONE CONTROL again to return to the main zone controls.

You can also press ZONE 2 ON/OFF or HDZONE ON/OFF on the front panel to switch off all output to the sub zone.
- You won’t be able to switch the main zone off completely unless you’ve switched off the MULTI-ZONE control first.
- If you don’t plan to use the MULTI-ZONE feature for a while, turn off the power in both the sub and main rooms so that this receiver is in standby.
ZONE 2 remote controls
Press the remote control’s ZONE 2 to operate the corresponding zone. The following table shows the possible ZONE 2 remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ø</td>
<td>Switches on/off power in the sub zone.</td>
</tr>
<tr>
<td>INPUT SELECT</td>
<td>Use to select the input function in the sub zone.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function directly (this may not work for some functions) in the sub zone.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the sub zone.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

Note
• The VOLUME +/- and MUTE buttons cannot be operated for HDZONE.

HDZONE remote controls
Press the remote control’s HDZONE to operate the corresponding zone. The following table shows the possible HDZONE remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ø</td>
<td>Switches on/off power in the HDZONE.</td>
</tr>
<tr>
<td>INPUT SELECT</td>
<td>Use to select the input function in the HDZONE.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function directly (this may not work for some functions) in the HDZONE.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the HDZONE.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

Note
• The ZONE 3 button is not used with this unit.

Network settings from a web browser
Network settings and Pandora account settings can be made using the browser on a computer connected to the same LAN as the receiver.
1 Press Ø STANDBY/ON to switch on the receiver.
2 Turn on the computer’s power and launch the Internet browser.
3 Input the receiver’s IP address into the browser’s address input field. For example, if the receiver’s address is 192.168.1.2, input “http://192.168.1.2/”. Check the receiver’s IP address at Checking the Network Information on page 89. When connected with the receiver, the Web Control screen appears in the browser.
4 When the Web Control screen appears, select the item you want to set.

Using the sleep timer
The sleep timer switches the receiver into standby after a specified amount of time so you can fall asleep without worrying about the receiver being left on all night. Use the remote control to set the sleep timer.
• Press RECEIVER to the receiver operation mode, then press SLEEP repeatedly to set the sleep time.

<table>
<thead>
<tr>
<th>30 min</th>
<th>60 min</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>90 min</td>
</tr>
</tbody>
</table>

• You can check the remaining sleep time at any time by pressing SLEEP once. Pressing repeatedly will cycle through the sleep options again.
• The sleep timer is valid for all zones. If any zone is on, the sleep timer continues functioning.

Dimming the display
You can choose between four brightness levels for the front panel display. Note that when selecting sources, the display automatically brightens for a few seconds.
• Press RECEIVER to the receiver operation mode, then press DIMMER repeatedly to change the brightness of the front panel display.
• You can also choose to turn the display off. In this case, the FL OFF indicator lights.

Switching the HDMI output
Set which terminal to use when outputting video and audio signals from the HDMI output terminals. The HDMI OUT 1 terminal is compatible with the Control with HDMI function.
1 Press RECEIVER to the receiver operation mode, then press HDMI OUT.
2 Use ↔/↑↓ to select the setting.

Please wait a while when Please wait ... is displayed.
The output switches among OUT 1+2, OUT 1, OUT 2 and Off each time the button is pressed.
• The synchronized amp mode is canceled when the HDMI output is switched. If you wish to use the synchronized amp mode, switch to OUT 1, then select the synchronized amp mode on the TV using the TV’s remote control.
• When MAIN/HDZONE is set to HDZONE, it is not possible to switch to OUT 2 (page 91).
• Only signals input in HDMI format can be played with the HDMI OUT 2 terminal.

Checking your system settings
Use the status display screen to check your current settings for features such as surround back channel processing and your current MCACC preset.
1 Press RECEIVER to the receiver operation mode, then press STATUS.
2 Use ↑/↓ to choose the setting.
The information on the main unit display switches as shown below each time one of the buttons is pressed.
Audio format ↔ Sampling frequency ↔ MCACC memory ↔ Auto phase control plus correction value ↔ Input source to be played in ZONE 2 ↔ Input source to be played in the HDZONE ↔ HDMI output setting ↔ Subzone to which the HDZONE is output
• For some settings, some items are not displayed.
3 When you’re finished, press STATUS again to switch off the display.
Reseting the system

Use this procedure to reset all the receiver’s settings to the factory default. Use the front panel controls to do this. Set MULTI-ZONE to MULTI ZONE OFF.
- Disconnect the iPod and USB memory device from the receiver beforehand.
- Set the Control with HDMI to OFF (see HDMI Setup on page 61).

1 Switch the receiver into standby.
2 While holding down ENTER on the front panel, press STANDBY/ON. The display shows RESET NO.
3 Select ‘RESET’ using PRESET or , then press ENTER on the front panel. The display shows RESET? OK.
4 Press ENTER to confirm.
OK appears in the display to indicate that the receiver has been reset to the factory default settings.
- Note that all settings will be saved, even if the receiver is unplugged.

### About the Remote Setup menu

The Remote Setup mode is set by pressing the number button while pressing RCU SETUP. The different items on the Remote Setup menu are described below. For their setting procedures, refer to the explanations for the respective items.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preset recall</td>
<td>Preset codes can be set for the various input functions. The remote control codes of a number of other devices (including products of other brands) are preset in the remote control to allow these devices to be operated. See Setting the remote to control other components on page 75.</td>
</tr>
<tr>
<td>Code learning</td>
<td>If the desired operations cannot be performed even though you have set the preset codes, the remote control signals of other devices can be learned directly. See Programming signals from other remote controls on page 74.</td>
</tr>
<tr>
<td>Direct function</td>
<td>This is a setting for changing only the remote control unit's operation screen, without changing the receiver's operation mode. When using one TV set, we recommend assigning the same TV's preset codes to the TV CONTROL input function on page 75.</td>
</tr>
<tr>
<td>Erase learning</td>
<td>This function is used to erase remote control codes that have been learned. Codes learned for the different input functions can be erased individually. See Erasing all learnt settings that are in one input function on page 75.</td>
</tr>
<tr>
<td>Reset function</td>
<td>This is a function for resetting preset codes that have been set. Key resetting can be done for individual input functions. See Erasing all learnt settings that are in one input function on page 75.</td>
</tr>
<tr>
<td>All reset</td>
<td>This is a function for resetting all remote control unit settings you have made to the factory settings when the remote control unit is input. This is convenient for using the remote control unit for devices not connected to the receiver. See Reseting the remote control settings on page 75.</td>
</tr>
<tr>
<td>Change RC mode</td>
<td>If you have multiple Pioneer receivers, amplifiers, etc., this setting can be used to prevent other units from operating simultaneously when the remote control unit is input. See Operating multiple receivers on page 75.</td>
</tr>
</tbody>
</table>

### Notes
- You can cancel or exit any of the steps by pressing RCU SETUP.
- After one minute of inactivity, the remote automatically exits the operation.

### Operating multiple receivers

Up to four receivers can be operated discretely using this receiver’s remote control when using multiple receivers, provided they are of the same model as this receiver. The receiver to be operated is switched by inputting the preset code to set the remote control setting.

- Set the remote modes on the receivers before using this function (see Programing signals from other remote controls on page 74).

1. Press and hold RCU SETUP, then press ‘4’ for three seconds. Release the button after the LED flashes once. The LED continues to flash.
   - To cancel the preset setup mode press RCU SETUP.
2. Press the number button for the receiver ("Receiver 1" to "Receiver 4") you wish to operate.
   - For example, to operate "Receiver 2", press ‘2’.
   - If the LED lights for one second and continues to flash, the setting has been successfully completed. When the preset code is input, the LED flashes three times to indicate that the setting has failed.

### Setting the remote to control other components

Most components can be assigned to one of the input function buttons (such as DVD or CD) using the component’s manufacturer preset code stored in the remote. However, there are cases where only certain functions may be controllable after assigning the proper preset code, or the codes for the manufacturer in the remote control will not work for the model that you are using. If you can’t find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 74).

- With the TV CONTROL buttons, the TV can be operated regardless of the input set for the remote control's operation mode. When using one TV set, we recommend assigning the same TV’s preset codes to the TV CONTROL INPUT button and the TV button. When using two TV sets, for better convenience assign the TV connected to the MONITOR OUT terminals to the TV CONTROL INPUT button, the other TV to the TV button.
- Devices may be assigned to the following input function buttons.

### Selecting preset codes directly

1. Press and hold RCU SETUP, then press ‘1’ for three seconds. Release the button after the LED flashes once. The LED continues to flash.
   - To cancel the preset setup mode press RCU SETUP.
2. Press the input function button for the component you want to control.
   - To assign the preset codes of the TV to be operated with the TV CONTROL function, press the TV CONTROL INPUT button.
   - The LED blinks once and flashes continuously.
3. Use the number buttons to enter the 4-digit preset code. See Selecting preset codes directly on page 114. If the LED lights for one second and continues to flash, the setting has been successfully completed. When the preset code is fully input, the LED flashes three times to indicate that the setting has failed. If this happens, enter the 4-digit preset code again.
Controlling the rest of your system

4 Repeat steps 2 through 3 for the other components you want to control.
To try out the remote control, switch the component on or off (into standby) by pressing SOURCE. If it doesn’t seem to work, select the next code from the list (if there is one).

5 Press RCU SETUP to exit the preset setup mode.

Programming signals from other remote controls
If the preset code for your component is not available, or the available preset codes do not operate correctly, you can program signals from the remote control of another component. This can also be used to program additional operations (buttons not covered in the presets) after assigning a preset code.
The remote can store about 120 preset codes from other components (this has been tested with codes of Pioneer format only).
Certain buttons represent operations that cannot be learned from other remote controls. The buttons available are shown below:

1 Press and hold RCU SETUP, then press ‘2’ for three seconds.
Release the button after the LED flashes once. The LED continues to flash.
• To “learn” codes at the TV CONTROL buttons, proceed to step 3.
• To cancel the preset setup mode press RCU SETUP.

2 Press the input function button for the component you want to control.
The LED blinks once and flashes continuously.

3 Point the two remote controls towards each other, then press the button that will be doing the learning on this receiver’s remote control.
The LED flashes once, then stops flashing, remaining lit.
• The remote controls should be 3 cm (1 inch) apart.

4 Press the corresponding button on the other remote control that is sending (teaching) the signal to this receiver’s remote control.
If the LED lights for one second and continues to flash, the setting has been successfully completed.
• If the LED flashes for five seconds, it means the memory is full. See Erasing all learnt settings that are in one input function on page 75 to erase a programmed button you’re not using to free up more memory (note that some signals may take more memory than others).
• Note that interference from TVs or other devices will sometimes result in the remote control learning the wrong signal.
• Some commands from other remote controls cannot be learned, but in most cases the remotes just need to be moved closer together or farther apart.

5 To program additional signals for the current component repeat steps 3 and 4.
To program signals for another component, exit and repeat steps 2 through 4.

6 Press RCU SETUP to exit the programming mode.

Erasing one of the remote control button settings
This erases one of the buttons you have programmed and restores the button to the factory default.

1 Press and hold RCU SETUP, then press ‘7′ for three seconds.
Release the button after the LED flashes once. The LED continues to flash.
• To erase operations registered at the TV CONTROL buttons, proceed to step 3.
• To cancel the preset setup mode press RCU SETUP.

2 Press the input function button corresponding to the command to be erased.
The LED flashes once.

3 Press and hold the button to be erased for three seconds.
If the LED lights for one second, the erasing has been successfully completed.

4 Repeat step 3 to erase other buttons.

5 Press RCU SETUP to exit the erasing mode.
Erasing all learnt settings that are in one input function

This operation erases all the operational settings of other devices that have been programmed in one input function, and restores the factory default. This function is handy for erasing all data programmed for devices no longer being used.

1 Press and hold RCU SETUP, then press ‘9’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   • To cancel the preset setup mode press RCU SETUP.

2 Press and hold the input function button corresponding to the command to be erased for three seconds.
   To erase the operations registered at all the TV CONTROL buttons, press the TV CONTROL INPUT button for 3 seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Direct function

• Default setting: On
You can use the direct function feature to control one component using the remote control while at the same time, using your receiver to playback a different component. This could let you, for example, use the remote control to set up and listen to a CD on the receiver, and then use the remote control to rewind a tape in your VCR while you continue to listen to your CD player.
When direct function is on, any component you select (using the input function buttons) will be selected by both the receiver and the remote control. When you turn direct function off, you can operate the remote control without affecting the receiver.

1 Press and hold RCU SETUP, then press ‘5’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   • To cancel the preset setup mode press RCU SETUP.

2 Press the input function button for the component you want to control.

3 Press ‘1’ (On) or ‘0’ (Off) to switch the direct function mode.
   If the LED lights for one second and continues to flash, the setting has been successfully completed.
   If the LED flashes three times, the setting has failed.

4 Press RCU SETUP to exit the setup.

About the ALL ZONE STBY (All Zone Standby) and DISCRETE ON (Discrete On) functions

ALL ZONE STBY (All Zone Standby)
The All Zone Standby can be used to turn all zones to OFF when the receiver’s power is switched to standby. Also, when using separate Pioneer amplifiers/receivers for the sub zones, they can also be set to standby simultaneously.

• In order to set the power of amplifiers/receivers connected to sub zones to the standby mode, the connected amplifiers/receivers must be installed or connected in such a way that they can receive remote control signals.
• The power of the amplifiers/receivers can be switched to standby with this operation even when using multiple Pioneer amplifiers/receivers and their Remote Control Mode have been changed.

DISCRETE ON (Discrete On)
The Discrete On function lets you perform a series of operations: switching to the input you want to play while turning the receiver’s power on. When the receiver is installed in an AV rack, etc., and you cannot tell whether the power is set to the on or the standby mode, this operation is handy because it allows you to switch to the selected input without switching the receiver’s power to standby, even if the power is on when the operation is performed.

Using All Zone Standby
1 Press ALL ZONE STBY DISCRETE ON.
   The LED continues to flash.
2 Press STANDBY/ON.
   The receiver’s power switches to standby and all zones are turned off.

Using Discrete On
1 Press ALL ZONE STBY DISCRETE ON.
   The LED continues to flash.
2 Press an input function button you want to play.
   The receiver’s power turns on (if it was already on, it stays on, without turning off), and the input switches to the input selected here.

Resetting the remote control settings
Use this procedure to reset all the remote control’s settings to the factory default.

• When preset codes are set, all the signals learned in the input function buttons are cleared. This function is convenient when you want to reset some but not all of input function buttons.

1 Press and hold RCU SETUP, then press ‘0’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
2 Press and hold the ENTER button for three seconds.
   If the LED lights for one second, the erasing has been successfully completed.

The Advanced MCACC menu

Making receiver settings from the Advanced MCACC menu ...................................................79
Automatic MCACC (Expert)...........................................................................................................79
Manual MCACC setup ................................................................................................................80
Checking MCACC Data ...............................................................................................................83
Data Management.......................................................................................................................83
Making receiver settings from the Advanced MCACC menu

The Advanced MCACC (Multi Channel ACoustic Calibration) system was developed in Pioneer’s laboratories with the aim of making it possible for home users to perform adjustments of the same level as in a studio easily and with high precision. The acoustic characteristics of the listening environment are measured and the frequency response is calibrated accordingly to allow high precision, automatic analysis and optimal calibration of the sound field to bring it closer to a studio environment than ever before. Furthermore, while it was previously difficult to eliminate standing waves, this receiver is equipped with a standing wave control function using a unique process to perform acoustic analysis and reduce their influence.

This section describes how to calibrate the sound field automatically and fine-adjust the sound field data manually.

1. Press STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.
2. Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use ▲▼,◄► and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
   - Press HOME MENU at any time to exit the Home Menu.
3. Select ‘Advanced MCACC’ from the Home Menu, then press ENTER.
4. Select the setting you want to adjust.
   - Full Auto MCACC – See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38 for a quick and effective automatic surround setup.
   - Auto MCACC – See Automatic MCACC (Expert) on page 79 for a more detailed MCACC setup.
   - Demo – No settings are saved and no errors occur. When the speakers are connected to this receiver, the test tone is output repeatedly. Press RETURN to cancel the test tone.

Automatic MCACC (Expert)

If your setup requires more detailed settings than those provided in Automatically conducting optimum sound tuning (Full Auto MCACC), you can customize your setup options below. You can calibrate your system differently for up to six different MCACC presets, which are useful if you have different listening positions depending on the type of source (for example, watching movies from a sofa, or playing a video game close to the TV).

Important
- Make sure the microphone/speakers are not moved during the Auto MCACC Setup.
- The screen saver will automatically appear after five minutes of inactivity.

CAUTION
- The test tones used in the Auto MCACC Setup are output at high volume.

1. Select ‘Auto MCACC’ from the Advanced MCACC menu, then press ENTER.
2. Select the parameters you want to set.
   - Use ▲▼,◄► to select the item, then use ▲▼,◄► to set.
   - Auto MCACC – The default is ALL (recommended), but you can limit the system calibration to only one setting (to save time) if you want.
     - When data measurement is taken (after selecting ALL or Keep SP System), the reverberation characteristics after calibration cannot be predicted, so the graph for the characteristics after calibration (‘After’) cannot be displayed. If you will need to display the graph for the characteristics after calibration (‘After’), take the measurement using the EQ Professional menu in the Manual MCACC setup (page 80).
     - The EQ Pro & S-Wave measurement is also taken when ALL or Keep SP System is selected. See Acoustic Calibration EQ Professional on page 82 for more on this.
     - Either effect of Acoustic Calibration EQ Professional and Standing Wave can be switched on and off in the respective MCACC preset. For details, see Setting the Audio options on page 65.
   - EQ Type (only available when the Auto MCACC Menu above is EQ Pro & S-Wave) – This describes how the frequency balance is adjusted. After a single calibration is performed, each of the following three correction curves can be stored separately in the MCACC memory.
     - SYMMETRY implements symmetric correction for each pair of left and right speakers to flatten the frequency-amplitude characteristics.
     - ALL CH ADJ is a ‘flat’ setting where all the speakers are set individually so no special weighting is given to any one channel.
     - FRONT ALIGN sets all speakers in accordance with the front speaker settings (no equalization is applied to the front left and right channels).
   - If you selected ALL or Keep SP System as your Auto MCACC menu, you can specify the MCACC preset where you want to save the SYMMETRY, ALL CH ADJ and FRONT ALIGN settings.
   - THX Speaker (only available when the Auto MCACC Menu above is ALL or Speaker Setting) – Select YES when using THX speakers (all speakers other than the front speakers are set to SMALL). In other cases, leave at NO.
   - STAND.WAVE Multi-Point (only available when the Auto MCACC Menu above is EQ Pro & S-Wave) – In addition to measurements at the listening position, you can use two more reference points for which test tones will be analyzed for standing waves. This is useful if you want to get a balanced ‘flat’ calibration for several seating positions in your listening area. Place the microphone at the reference point indicated on-screen and note that the last microphone placement will be at your main listening position.
3 Connect the microphone to the MCACC SETUP MIC jack on the front panel. Make sure there are no obstacles between the speakers and the microphone.

If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.

• It may not be possible to measure correctly if the microphone is placed on a table, sofa, etc.

4 When you’re finished setting the options, select START then press ENTER.

5 Follow the instructions on-screen.

6 Wait for the Auto MCACC Setup to finish outputting test tones. A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this.

• With error messages (such as Too much ambient noise! or Check microphone), select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup on page 39) and verifying the microphone connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.

• Do not adjust the volume during the test tones. This may result in incorrect speaker settings.

7 If necessary, confirm the speaker configuration in the GUI screen.

The configuration shown on-screen should reflect the actual speakers you have. If no operations are performed for 10 seconds while the speaker configuration check screen is being displayed, the Auto MCACC Setup will resume automatically. In this case, you don’t need to select OK and press ENTER in step 8.

• If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑/↓ to select the speaker and ←/→ to change the setting and continue.

• If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.

If Reverse Phase is displayed, the speaker’s wiring (+ and −) may be inverted. Check the speaker connections.

— If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly. After this, perform the Auto MCACC procedure again.

— If the connections were right, select GO NEXT and continue.

8 Make sure ‘OK’ is selected, then press ENTER.

A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings. Again, try to be as quiet as possible while this is happening. It may take 3 to 7 minutes.

• If you selected a STAND.WAVE Multi-Point setup (in step 2), you will be asked to place the mic at the 2nd and 3rd reference points before finally placing it at your main listening position.

9 The Auto MCACC Setup procedure is completed and the Advanced MCACC menu reappears automatically.

The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the Manual MCACC setup menu (starting below) or Manual SP Setup menu (starting on page 86).

• Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 86.

• The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.

• If Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.

You can also choose to view the settings by selecting individual parameters from the MCACC Data Check screen (see Checking MCACC Data on page 89). Press RETURN after you have finished checking each screen. When you’re finished, select RETURN to go back to the Home Menu.

Be sure to disconnect the microphone from this receiver upon completion of the Auto MCACC Setup.

Manual MCACC setup

You can use the settings in the Manual MCACC setup menu to make detailed adjustments when you’re more familiar with the system. Before making these settings, you should have already completed Automatically conducting optimum sound tuning (Full Auto MCACC) on page 56. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

CAUTION

• The test tones used in the Manual MCACC setup are output at high volume.

Important

• Press the MCACC button while the pertinent setup screens are displayed to select MCACC presets.

• For some of the settings below, you’ll have to connect the setup microphone to the front panel and place it about ear level at your normal listening position. Press HOME MENU to display the Home Menu before you connect the microphone to this receiver.

• See Problems when using the Auto MCACC Setup on page 39 for notes regarding high background noise levels and other possible interference.

• If you’re using a subwoofer, switch it on and turn up the volume to the middle position.

1 Select ‘Manual MCACC’ from the Advanced MCACC menu.

See Making receiver settings from the Advanced MCACC menu on page 79 if you’re not already at this screen.
The Advanced MCACC menu

2 Select the setting you want to adjust.

If you're doing this for the first time, you might want to make these settings in order.

- **Fine Channel Level** – Make fine adjustments to the overall balance of your speaker system (see Fine Channel Level on page 81).
- **Fine Speaker Distance** – Make precise delay settings for your speaker system (see Fine Speaker Distance on page 81).
- **Standing Wave** – Control overly resonant low frequencies in your listening room (see Standing Wave on page 81).

The last two settings are specifically for customizing the parameters explained in Acoustic Calibration EQ Adjust on page 81:

- **EQ Adjust** – Manually adjust the frequency balance of your speaker system while listening to test tones (see Acoustic Calibration EQ Adjust on page 81).
- **EQ Professional** – Calibrate your system based on the direct sound coming from the speakers and make detailed settings according to your room's reverb characteristics (see Acoustic Calibration EQ Professional on page 82).

### Fine Channel Level

- **Default setting:** 0.0dB (all channels)

You can achieve better surround sound by properly adjusting the overall balance of your speaker system. You can adjust the Channel level of each speaker in 0.5 dB increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 86.

1 **Select ‘Fine Channel Level’ from the Manual MCACC setup menu.**

The volume increases to the 0.0 dB reference level.

2 **Adjust the level of the left channel.**

This will be the reference speaker level, so you may want to keep the level around 0.0dB so that you’ll have plenty of room to adjust the other speaker levels.

- After pressing ENTER, test tones will be output.

3 **Select each channel in turn and adjust the levels (+/-12.0 dB) as necessary.**

Use +/- to adjust the volume of the speaker you selected to match the reference speaker. When it sounds like both tones are the same volume, press ENTER to confirm and continue to the next channel.

- For comparison purposes, the reference speaker will change depending on which channel you select.
- If you want to go back and adjust a channel, simply use +/- to select it.

4 **When you’re finished, press RETURN.**

You will return to the Manual MCACC setup menu.

### Fine Speaker Distance

- **Default setting:** 10°00' (all speakers)

For proper sound depth and separation with your system, it is necessary to add a slight bit of delay to some speakers so that all sounds will arrive at the listening position at the same time. You can adjust the distance of each speaker in half inch increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 86.

1 **Select ‘Fine SP Distance’ from the Manual MCACC setup menu.**

2 **Adjust the distance of the left channel from the listening position.**

3 **Select each channel in turn and adjust the distance as necessary.**

Use +/- to adjust the delay of the speaker you selected to match the reference speaker. Listen to the reference speaker and use it to measure the target channel. From the listening position, face the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span.

4 **When you’re finished, press RETURN.**

You will return to the Manual MCACC setup menu.

### Acoustic Calibration EQ Adjust

- **Default setting:** ON/ATT 0.0dB (all filters)

Acoustic Standing waves occur when, under certain conditions, sound waves from your speaker system resonate mutually with sound waves reflected off the walls in your listening area. This can have a negative effect on the overall sound, especially at certain lower frequencies. Depending on speaker placement, your listening position, and ultimately the shape of your room, it results in an overly resonant (‘boomy’) sound. The Standing Wave Control uses filters to reduce the effect of overly resonant sounds in your listening area. During playback of a source, you can customize the filters used for Standing Wave Control for each of your MCACC presets.

- **Standing Wave control filter settings cannot be changed during playback of sources using the HDMI connection.**

1 **Select ‘Standing Wave’ from the Manual MCACC setup menu.**

2 **Adjust the parameters for the Standing Wave Control.**

- **Filter Channel** – Select the channel to which you will apply the filter(s): MAIN (all except center channel and subwoofer), CENTER or SW (subwoofer).
- **TRIM** (only available when the filter channel above is SW) – Adjust the subwoofer channel level (to compensate for the difference in output post-filter).
- **FREQ / ATT** – These are the filter parameters where FREQ represents the frequency you will be targeting and Q is the bandwidth (the higher the Q, the narrower the bandwidth, or range) of the attenuation (ATT, the amount of reduction to the targeted frequency).

3 **When you’re finished, press RETURN.**

You will return to the Manual MCACC setup menu.

### Standing Wave

- **Default setting:** ON/ATT 0.0dB (all filters)

Standing Wave control uses filters to reduce the effect of overly resonant sounds in your listening area. During playback of a source, you can customize the filters used for Standing Wave Control for each of your MCACC presets.

- **Standing Wave control filter settings cannot be changed during playback of sources using the HDMI connection.**

1 **Select ‘Standing Wave’ from the Manual MCACC setup menu.**

2 **Adjust the parameters for the Standing Wave Control.**

- **Filter Channel** – Select the channel to which you will apply the filter(s): MAIN (all except center channel and subwoofer), CENTER or SW (subwoofer).
- **TRIM** (only available when the filter channel above is SW) – Adjust the subwoofer channel level (to compensate for the difference in output post-filter).
- **FREQ / ATT** – These are the filter parameters where FREQ represents the frequency you will be targeting and Q is the bandwidth (the higher the Q, the narrower the bandwidth, or range) of the attenuation (ATT, the amount of reduction to the targeted frequency).

3 **When you’re finished, press RETURN.**

You will return to the Manual MCACC setup menu.
1 Select ‘EQ Adjust’ from the Manual MCACC setup menu.
2 Select the channel(s) you want and adjust to your liking.
   Use †/‡ to select the channel.
   Use †/‡ to select the frequency and †/‡ to boost or cut the EQ. When you’re finished, go back to the top of the screen and press †/‡ to return to Ch, then use †/‡ to select the channel.
   • The OVER! indicator shows in the display if the frequency adjustment is too drastic and might distort. If this happens, bring the level down until OVER! disappears from the display.
3 When you’re finished, press RETURN.
   You will return to the Manual MCACC setup menu.

Note
Changing the frequency curve of one channel too drastically will affect the overall balance. If the speaker balance seems uneven, you can raise or lower channel levels using test tones with the TRIM feature. Use †/‡ to select TRIM. Then use †/‡ to raise or lower the channel level for the current speaker.

Acoustic Calibration EQ Professional
This setup minimizes the unwanted effects of room reverberation by allowing you to calibrate your system based on the direct sound coming from the speakers. Performing the Acoustic Calibration EQ Professional procedure is effective when the lower frequencies seem overly reverberant in your listening room (i.e. it sounds ‘boomy’) as shown at Type A below, or when different speakers balance seems uneven. To do this, use the Acoustic Calibration EQ Professional function.

• Type A: Reverbance of high vs. low frequencies

   ![Diagram]

   Level
   0 80 160
   Time (in msec)
   Acoustic Cal. EQ Pro. calibration range
   Conventional MCACC EQ calibration range
   Low frequencies
   High frequencies

   Using Acoustic Calibration EQ Professional

   1 Select ‘EQ Professional’, then press ENTER.
   2 Select an option and press ENTER.
      • Reverb Measurement – Use this to measure the reverb characteristics before and after calibration.
      • Reverb View – You can check the reverb measurements made for specified frequency ranges in each channel.

   After the Acoustic Calibration Equalization is set, you are given the option to check the settings on-screen. Press RETURN when you’re done.

   The reverb characteristics are displayed when the Full Auto MCACC or Reverb Measurement measurements are conducted.

   5 If ‘Advanced EQ Setup’ is selected, select the MCACC memory to be stored, then enter the desired time setting for calibration, and then select START.
      • To specify the place where the MCACC memory is to be stored, press MCACC. Then enter the desired time setting for calibration, and then select START.

   Based on the reverb measurement above, you can choose the time period that will be used for the final frequency adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use the measurement results as a reference for your time setting. For an optimal system calibration based on the direct sound coming from the speakers, we recommend using the 30-50ms setting.

   After you’ve finished, select START. It will take about 2 to 4 minutes for the calibration to finish.

   After the Acoustic Calibration Equalization is set, you are given the option to check the settings on-screen.
Checking MCACC Data

At the procedure of Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38, the procedure of Automatic MCACC (Expert) on page 79 or after fine-adjusting at Manual MCACC setup on page 80, you can check your calibrated settings using the GUI screen.

1. Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use 
   \( \uparrow / \downarrow / \leftarrow / \rightarrow \) and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘MCACC Data Check’ from the Home Menu.

3. Select the setting you want to check.
   - **Speaker Setting** – Used to check the settings of the speaker systems. See Speaker Setting on page 83 for more on this.
   - **Channel Level** – Used to check the output level of the different speakers. See Channel Level on page 83 for more on this.
   - **Speaker Distance** – Used to check the distance to the different speakers. See Speaker Distance on page 83 for more on this.
   - **Standing Wave** – Used to check the standing wave control filter settings. See Standing Wave on page 83 for more on this.
   - **Acoustic Cal EQ** – Used to check the calibration values of the listening environment’s frequency response. See Acoustic Cal EQ on page 83 for more on this.

4. Press RETURN to go back to the MCACC Data Check menu, repeating steps 2 and 3 to check other settings.

5. When you’re finished, press RETURN. You will return to the Home Menu.

**Speaker Setting**

Use this to display the speaker size and number of speakers. See Speaker Setting on page 83 for more on this.

1. Select ‘Speaker Setting’ from the MCACC Data Check menu.

2. Select the channel you want to check.
   Use \( \uparrow / \downarrow \) to select the channel. The corresponding channel on the layout diagram is highlighted.

**Channel Level**

Use this to display the level of the various channels. See Channel Level on page 87 for more on this.

1. Select ‘Channel Level’ from the MCACC Data Check menu.

2. When ‘MCACC’ is highlighted, use \( \leftarrow / \rightarrow \) to select the MCACC preset you want to check.
   The level of the various channels set at the selected MCACC preset is displayed. ‘---’ is displayed for channels that are not connected.

**Speaker Distance**

Use this to display the distance from the different channels to the listening position. See Speaker Distance on page 87 for more on this.

1. Select ‘Speaker Distance’ from the MCACC Data Check menu.

2. When ‘MCACC’ is highlighted, use \( \leftarrow / \rightarrow \) to select the MCACC preset you want to check.
   The distance from the various channels set at the selected MCACC preset is displayed. ‘---’ is displayed for channels that are not connected.

**Standing Wave**

Use this to display the standing wave related adjustment values for the various MCACC memories. See Standing Wave on page 81 for more on this.

1. Select ‘Standing Wave’ from the MCACC Data Check menu.

2. When ‘Filter Channel’ is highlighted, use \( \uparrow / \downarrow \) to select the channel for which you want to check standing wave control.
   The standing wave related calibration value for the selected channel stored at the selected MCACC preset and its graph are displayed.

3. Press \( \leftrightarrow \) to highlight ‘MCACC’, then use \( \uparrow / \downarrow \) to select the MCACC preset you want to check.

**Acoustic Cal EQ**

Use this to display the calibration values for the frequency response of the various channels set in the different MCACC presets. See Acoustic Calibration EQ Adjust on page 81 for more on this.

1. Select ‘Acoustic Cal EQ’ from the MCACC Data Check menu.

2. When ‘Ch’ is highlighted, use \( \uparrow / \downarrow \) to select the channel.
   The calibration value for the frequency response of the selected channel stored at the selected MCACC preset and its graph are displayed.

3. Press \( \leftrightarrow \) to highlight ‘MCACC’, then use \( \uparrow / \downarrow \) to select the MCACC preset you want to check.

**Data Management**

This system allows you to store up to six MCACC presets, allowing you to calibrate your system for different listening positions (or frequency adjustments for the same listening position). This is useful for alternate settings to match the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

From this menu you can copy from one preset to another, name presets for easier identification and clear any ones you don’t need.

- This can be done in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38 or Automatic MCACC (Expert) on page 79, either of which you should have already completed.

1. Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use \( \uparrow / \downarrow / \leftarrow / \rightarrow \) and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

2. Select ‘Data Management’ from the Home Menu.

3. Select the setting you want to adjust.
   - **Memory Rename** – Name your MCACC presets for easy identification (see Renaming MCACC presets on page 84).
   - **MCACC Memory Copy** – Copy settings from one MCACC preset to another (see Copying MCACC preset data on page 84).
   - **MCACC Memory Clear** – Clear any MCACC presets that you don’t want (see Clearing MCACC presets on page 84).
Renaming MCACC presets
If you have several different MCACC presets that you’re using, you may want to rename them for easier identification.

1. Select ‘Memory Rename’ from the Data Management setup menu.
2. Select the MCACC preset you want to rename, then select an appropriate preset name.
   Use ↑/↓ to select the preset, then ↔ to select a preset name.
3. Repeat for as many MCACC presets as necessary, then press RETURN when you’re finished.
   You will return to the Data Management setup menu.

Copying MCACC preset data
If you want to manually adjust the Acoustic Calibration EQ (see Manual MCACC setup on page 80), we recommend copying your current settings to an unused MCACC preset. Instead of just a flat EQ curve, this will give you a reference point from which to start.

- The settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38 or Automatic MCACC (Expert) on page 79.

1. Select ‘MCACC Memory Copy’ from the Data Management setup menu.
2. Select the setting you want to copy.
   • All Data – Copies all the settings of the selected MCACC preset memory.
   • Level & Distance – Copies only the channel level and speaker distance settings of the selected MCACC preset memory.
3. Select the MCACC preset you’ll be copying the settings ‘From’, then specify where you want to copy them ‘To’.
   Make sure you don’t overwrite an MCACC preset you’re currently using (this can’t be undone).
4. Select ‘OK’ to confirm and copy the settings.
   When MCACC Memory Copy? is displayed, select YES. If NO is selected, the memory is not copied.
   Completed! shows in the GUI screen to confirm the MCACC preset has been copied, then you automatically return to the Data Management setup menu.

Clearing MCACC presets
If you are no longer using one of the MCACC presets stored in memory, you can choose to clear the calibration settings of that preset.

1. Select ‘MCACC Memory Clear’ from the Data Management setup menu.
2. Select the MCACC preset you want to clear.
   Make sure you don’t clear an MCACC preset you’re currently using (this can’t be undone).
3. Select ‘OK’ to confirm and clear the preset.
   When MCACC Memory Clear? is displayed, select YES. If NO is selected, the memory is not cleared.
   Completed! shows in the GUI screen to confirm the MCACC preset has been cleared, then you automatically return to the Data Management setup menu.

Making receiver settings from the System Setup menu

The following section describes how to change the speaker-related settings manually and make various other settings (input selection, OSD language selection, etc.).

- The OSD display is only displayed when the receiver’s HDMI OUT 1 terminal and the TV’s HDMI input are connected with an HDMI cable. If the TV is connected with anything other than an HDMI cable, watch the front panel display while performing the various operations and making settings.

1. Press STANDBY/ON to switch on the receiver and TV. Make sure that the TV’s video input is set to this receiver.
2. Press RECEIVER on the remote control, then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use Up/Down/Left/Right and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
3. Press HOME MENU at any time to exit the Home Menu.
4. Select ‘System Setup’ from the Home Menu, then press ENTER.
5. Select the setting you want to adjust.
   - Manual SP Setup – Sets the type of connection used for surround back terminals and the distance, number and overall balance of the connected speakers (see Manual speaker setup on page 86).
   - Input Setup – Specifies what you’ve connected to the digital, HDMI and component video inputs (see The Input Setup menu on page 89).
   - OSD Language – The GUI screen’s display language can be changed (see Changing the OSD display language (OSD Language) on page 41).
   - Network Setup – Conducts the setup necessary to connect this unit to the network (see Network Setup menu on page 88).
   - HDMI Setup – Synchronizes this receiver with your Pioneer component supporting Control with HDMI (page 60).
   - MHL Setup – Changes the settings related to MHL (see MHL Setup on page 88).
   - Other Setup – Makes customized settings to reflect how you are using the receiver (see The Other Setup menu on page 89).

Manual speaker setup

This receiver allows you to make detailed settings to optimize the surround sound performance. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

These settings are designed to customize your system, but if you’re satisfied with the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38, it isn’t necessary to make all of these settings.

**CAUTION**

- The test tones used in the Manual SP Setup are output at high volume.

1. Select ‘Manual SP Setup’, then press ENTER. See Making receiver settings from the System Setup menu on page 86 if you’re not already at this screen.
2. Select the setting you want to adjust.
   - Speaker System – Specifies how you are using your surround back speaker terminals and B speaker terminals (page 88).
   - Speaker Setting – Specifies the size and number of speakers you’ve connected (page 86).
   - Channel Level – Adjusts the overall balance of your speaker system (page 87).
   - Speaker Distance – Specifies the distance of your speakers from the listening position (page 87).
   - X-Curve – Adjusts the tonal balance of your speaker system for movie soundtracks (page 87).

3. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Speaker system setting

- Default setting: Normal(SB/FH)

There are several ways you can use the speaker terminals with this receiver. In addition to a normal home theater setup where they are used for the front height speakers or front wide speakers, they can be used for bi-amping the front speakers or as an independent speaker system in another room.

1. Select ‘Speaker System’ from the Manual SP Setup menu. See Making receiver settings from the System Setup menu on page 86 if you’re not already at this screen.
2. Select the speaker system setting.
   - Normal(SB/FH) – Select for normal home theater use with front height speakers in your main (speaker system A) setup.
   - Normal(SB/FW) – Select for normal home theater use with front wide speakers in your main (speaker system A) setup.
   - Speaker B – Select to use the B speaker terminals to listen to stereo playback in another room (see Switching the speaker terminals on page 69).
   - Front Bi-Amp – Select this setting if you’re bi-amping your front speakers (see Bi-amping your speakers on page 69).
   - ZONE 2 – Select to use the surround back speaker terminals for an independent system in another zone (see Using the MULTI ZONE controls on page 69).

3. If you selected Normal(SB/FH), Normal(SB/FW), or Speaker B in Step 2, select the placement of the surround speakers.

   In a 7.1-channel surround system with surround speakers placed directly at the sides of the listening position, the surround sound of 5.1-channel sources is heard from the side. This function mixes the sound of the surround speakers with the surround back speakers so that the surround sound is heard from diagonally to the rear as it should be.

   Depending on the positions of the speakers and the sound source, in some cases it may not be possible to achieve good results. In this case, set the setting to ON SIDE or IN REAR.
   - ON SIDE – Select when the surround speakers is positioned right beside you.
   - IN REAR – Select when the surround speaker is positioned obliquely behind you.

4. When ‘Setting Change?’ is displayed, select Yes.

   If No is selected, the setting is not changed. You will return to the Manual SP Setup menu.

Speaker Setting

Use this setting to specify your speaker configuration (size, number of speakers and crossover frequency). It is a good idea to make sure that the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 38 are correct. Note that this setting applies to all MCACC presets, and cannot be set independently.

- If you’re using a THX speaker setup, set all speakers to SMALL.

1. Select ‘Speaker Setting’ from the Manual SP Setup menu.
2. Choose the set of speakers that you want to set, then select a speaker size.

   Use Up/Down/Left/Right to select the size (and number) of each of the following speakers:
• **Front** – Select **LARGE** if your front speakers reproduce bass frequencies effectively, or if you didn’t connect a subwoofer. Select **SMALL** to send the bass frequencies to the subwoofer.

• **Center** – Select **LARGE** if your center speaker reproduces bass frequencies effectively, or select **SMALL** to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a center speaker, choose **NO** (the center channel is sent to the front speakers).

• **FH** – Select **LARGE** if your front height speakers reproduce bass frequencies effectively, or select **SMALL** to send bass frequencies to the other speakers or subwoofer. If you didn’t connect front height speakers, choose **NO** (the front height channel is sent to the front speakers).

— If you can adjust this setting only when **Speaker System Setting** is **Normal(SB/FH)**.
— If the surround speakers are set to **NO**, this setting will automatically be set to **NO**.

• **FW** – Select **LARGE** if your front wide speakers reproduce bass frequencies effectively, or select **SMALL** to send bass frequencies to the other speakers or subwoofer. If you didn’t connect front wide speakers, choose **NO** (the front wide channel is sent to the front speakers).

— You can adjust this setting only when **Speaker System Setting** is **Normal(SB/FW)**.
— If the surround speakers are set to **NO**, this setting will automatically be set to **NO**.

• **Surr** – Select **LARGE** if your surround speakers reproduce bass frequencies effectively. Select **SMALL** to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround speakers choose **NO** (the sound of the surround channels is sent to the front speakers or a subwoofer).

• **SB** – Select the number of surround back speakers you have (one, two or none). Select **LARGE**x2 or **LARGE**x1 if your surround back speakers reproduce bass frequencies effectively. Select **SMALL**x2 or **SMALL**x1 to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround back speakers choose **NO**.

— If you selected **ZONE 2** or **Front Bi-Amp** (in **Speaker system setting** on page 96) you can’t adjust the surround back settings.
— If the surround speakers are set to **NO**, the surround back speakers will automatically be set to **NO**.

• **SW** – LFE signals and bass frequencies of channels set to **SMALL** are output from the subwoofer when **YES** is selected. Choose the **PLUS** setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are output from the subwoofer). If you didn’t connect a subwoofer choose **NO** (the bass frequencies are output from other speakers).

— If you have a subwoofer and like lots of bass, it may seem logical to select **LARGE** for your front speakers and **PLUS** for the subwoofer. This may not, however, yield the best bass results. Depending on the speaker placement of your room you may actually experience a decrease in the amount of bass due low frequency cancellations. In this case, try changing the position or direction of speakers. If you can’t get good results, listen to the bass response with it set to **PLUS** and **YES** or the front speakers set to **LARGE** and **SMALL** alternatively and let your ears judge which sounds best. If you’re having problems, the easiest option is to route all the bass sounds to the subwoofer by selecting **SMALL** for the front speakers.

If you select **NO** for the subwoofer the front speakers will automatically be fixed to **LARGE**. Also, the center, surround, surround back, front height and front wide speakers can’t be set to **LARGE** if the front speakers are set to **SMALL**. In this case, all bass frequencies are sent to the subwoofer.

3 Select ‘X. OVER’ and set the crossover frequency.

Frequencies below this point will be sent to the subwoofer (or **LARGE** speakers).

• This setting decides the cutoff between bass sounds playing back from the speakers selected as **LARGE**, or the subwoofer, and bass sounds playing back from those selected as **SMALL**. It also decides where the cutoff will be for bass sounds in the LFE channel.

• With **Full Auto MCACC** setup or **Auto MCACC** setup (ALL or **Speaker Setting**), the setting here will not apply and the crossover frequency will be automatically set. Crossover frequency is a frequency aimed at achieving the optimal sound field taking into account the bass capacity of all connected speakers and human aural characteristics.

• If you’re using THX speakers, confirm that the crossover frequency is set to 80Hz.

4 When you’re finished, press RETURN.

You will return to the Manual SP Setup menu.

---

**Channel Level**

Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1 Select ‘Channel Level’ from the Manual SP Setup menu.

The test tones will start.

2 Adjust the level of each channel using ↔/→.

Use ↑/↓ to switch speakers.

Adjust the level of each speaker as the test tone is emitted.

• If you are using a Sound Pressure Level (SPL) meter, take the readings from your main listening position and adjust the level of each speaker to 76 dB SPL (C-weighting/slow reading).

3 When you’re finished, press RETURN.

You will return to the Manual SP Setup menu.

---

**Speaker Distance**

For good sound depth and separation from your system, you need to specify the distance of your speakers from the listening position. The receiver can then add the proper delay needed for effective surround sound.

1 Select ‘Speaker Distance’ from the Manual SP Setup menu.

2 Adjust the distance of each speaker using ↔/→.

You can adjust the distance of each speaker in 1/2 inch Increments.

3 When you’re finished, press RETURN.

You will return to the Manual SP Setup menu.

---

**X-Curve**

Most soundtracks mixed for cinema sound too bright when played back in large rooms. The X-Curve setting acts as a kind of re-equalization for home theater listening, and restores proper tonal balance of movie soundtracks.

1 Select ‘X-Curve’ from the Manual SP Setup menu.

2 Choose the X-Curve setting you want.

Use ↔/→ to adjust the setting. The X-Curve is expressed as a downwards slope in decibels per octave, starting at 2 kHz. The sound becomes less bright as the slope increases (to a maximum of −3.0dB/oct).

Use the following guidelines to set the X-Curve according to your room size:

<table>
<thead>
<tr>
<th>Room size (ft²)</th>
<th>≤400</th>
<th>≤500</th>
<th>≤650</th>
<th>≤800</th>
<th>≤1200</th>
<th>≤1200</th>
</tr>
</thead>
<tbody>
<tr>
<td>X-Curve (dB/oct)</td>
<td>−0.5</td>
<td>−1.0</td>
<td>−1.5</td>
<td>−2.0</td>
<td>−2.5</td>
<td>−3.0</td>
</tr>
</tbody>
</table>

• If you select **OFF**, the frequency curve will be flat and the X-Curve has no effect.

3 When you’re finished, press RETURN.
### Network Setup menu

Make the settings for connecting the receiver to the Internet and using the network functions.

1. **Press** **REC** on the remote control, then press **HOME MENU**. A Graphical User Interface (GUI) screen appears on your TV. Use **↑/↓/←/→** and **ENTER** to navigate through the screens and select menu items. Press **RETURN** to exit the current menu.

2. **Select** ‘System Setup’ from the Home Menu.

3. **Select** ‘Network Setup’ from the System Setup menu.

4. **Select** the setting you want to adjust.

If you are doing this for the first time, you may want to adjust these settings in order:

- **IP Address, Proxy** – Sets up the IP address/Proxy of this receiver (page 89).
- **Network Standby** – Allows the AVNavigator function to be used even when the receiver is in the standby mode (page 89).
- **Friendly Name** – The name of the receiver displayed on a computer or other device connected to the network can be changed (page 88).
- **Parental Lock** – Restricts usage of network functions (page 89).
- **Port Number Setting** – Sets the numbers of the ports where signals from IP Control are received (page 89).

#### IP address/Proxy setting

In case the router connected to the LAN terminal on this receiver is a broadband router (with a built-in DHCP server function), simply turn on the DHCP server function, and you will not need to set up the network manually.

You must set up the network as described below only when you have connected this receiver to a broadband router without a DHCP server function. Before you set up the network, consult with your ISP or the network manager for the required settings. It is advised that you also refer to the operation manual supplied with your network component.

- In case you make changes to the network configuration without the DHCP server function, make the corresponding changes to the network settings of this receiver.

**IP Address**

The IP address to be entered must be defined within the following ranges. If the IP address defined is beyond the range, the network is automatically set up, and you do not need to follow Steps 3. Proceed with Step 4.

- **Class A**: 10.0.0.1 to 10.255.255.254
- **Class B**: 172.16.0.1 to 172.31.255.254
- **Class C**: 192.168.0.1 to 192.168.255.254

**Subnet Mask**

In case an xDSL modem or a terminal adapter is directly connected to this receiver, enter the subnet mask provided by your ISP on paper. In most cases, enter 255.255.255.0.

**Default Gateway**

In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

**Primary DNS Server/Secondary DNS Server**

In case the receiver is connected to the Internet via a proxy server. Enter the IP address of your proxy server in the ‘Proxy Hostname’ field. Also, enter the port number of your proxy server in the ‘Proxy Port’ field.

**Proxy Hostname/Proxy Port**

This setting is required when you connect this receiver to the Internet via a proxy server. Enter the IP address of your proxy server in the ‘Proxy Hostname’ field. Also, enter the port number of your proxy server in the ‘Proxy Port’ field.

1. **Select** ‘IP Address, Proxy’ from the Network Setup menu.

2. **Select** the DHCP setting you want.

When you select **ON**, the network is automatically set up, and you do not need to follow Steps 3. Proceed with Step 4.

- **ON** – The AVNavigator function can be used even when the receiver is in the standby mode.
- **OFF** – The AVNavigator function cannot be used when the receiver is in the standby mode (This lets you reduce power consumption in the standby mode).

**Subnet Mask**

In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

**Primary DNS Server/Secondary DNS Server**

In case you select ‘ON’, proceed with Step 7. In case you select ‘OFF’, proceed with Step 5.

3. **Enter** the IP Address, Subnet Mask, Default Gateway, Primary DNS Server and Secondary DNS Server.

   - **IP Address**
   - **Subnet Mask**
   - **Default Gateway**
   - **Primary DNS Server**
   - **Secondary DNS Server**

4. **Select** ‘OFF’ or ‘ON’ for the Enable Proxy Server setting to deactivate or activate the proxy server.

5. **Enter** the address of your proxy server or the domain name.

6. **Enter** the port number of your proxy server.

7. **Select** ‘OK’ to confirm the IP Address/Proxy setup.

**Network Standby**

This setting allows the AVNavigator function for operating the receiver from a computer connected on the same LAN as the receiver to be used even when the receiver is in the standby mode.

1. **Select** ‘Network Standby’ from the Network Setup menu.

2. **Specify** whether the Network Standby is ON or OFF.

   - **ON** – The AVNavigator function can be used even when the receiver is in the standby mode.
   - **OFF** – The AVNavigator function cannot be used when the receiver is in the standby mode.

**Friendly Name**

1. **Select** ‘Friendly Name’ from the Network Setup menu.

2. **Select** ‘Edit Name’ then select ‘Rename’.

3. **Input** the name you want.

   - **ON** – The AVNavigator function can be used even when the receiver is in the standby mode.
   - **OFF** – The AVNavigator function cannot be used even when the receiver is in the standby mode (This lets you reduce power consumption in the standby mode).

4. **Input** the name you want.

   - **ON** – The AVNavigator function can be used even when the receiver is in the standby mode.
   - **OFF** – The AVNavigator function cannot be used even when the receiver is in the standby mode (This lets you reduce power consumption in the standby mode).

5. **Enter** the name you want.

   - **ON** – The AVNavigator function can be used even when the receiver is in the standby mode.
   - **OFF** – The AVNavigator function cannot be used even when the receiver is in the standby mode (This lets you reduce power consumption in the standby mode).
The System Setup and Other Setup menus

Parental Lock
Set restrictions for using Internet services. Also set the password accompanying the usage restrictions.
• Upon shipment from the factory, the password is set to “0000”.

Important
When the INTERNET RADIO, PANDORA or FAVORITES input is selected, the setting made here cannot be reflected.
1 Select ‘Parental Lock’ from the Network Setup menu.
2 Input the password.
Use †/ ‡ to select a character, Ô/Ô to set the position, and ENTER to confirm your selection.
3 Specify whether to turn Parental Lock on or off.
• OFF – Internet services are not restricted.
• ON – Internet services are restricted.
4 If you want to change the password, select Change Password.
In this case, the procedure returns to step 2.

Port Number Setting
On this receiver, there can be up to 5 numbers of ports where signals are received.
1 Select ‘Port Number Setting’ from the Network Setup menu.
2 Select the port number you want to change.
3 Input the port number.
• Use †/ ‡ to select a character, Ô/Ô to set the position, and ENTER to confirm your selection.
• It is not possible to set the same port number more than once.
4 If there are other port numbers you want to change, repeat steps 2 and 3.

Note
We recommend setting the port number to 00003 or within the range of 49152 to 65535.
When the port number is changed, network communications between the receiver and AVNavigator are no longer possible. In this case, click Settings on the AVNavigator’s function menu, select the IP Address tab and input one of the port numbers set on the receiver side to enable communications with AVNavigator.

Checking the Network Information
The setting status of the following network-related items can be checked.
• IP Address – Check the IP address of this receiver.
• MAC Address – Check the MAC address of this receiver.
• Friendly Name – Friendly Name on page 89.
1 Press RECEIVER on the remote control, then press HOME MENU.
A Graphical User Interface (GUI) screen appears on your TV. Use †/ ‡ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2 Select ‘Network Information’ from the Home Menu.
Display the setting status of the network-related items.

MHL Setup
Select whether or not to switch the input automatically to the MHL input when an MHL-compatible device is connected.
• Default setting: ON
1 Press RECEIVER on the remote control, then press HOME MENU.
A Graphical User Interface (GUI) screen appears on your TV. Use †/ ‡ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
• Press HOME MENU at any time to exit the Home Menu.
2 Select ‘System Setup’ from the Home Menu, then press ENTER.
3 Select ‘MHL Setup’ from the System Setup menu.
4 Select the ‘Auto input switching’ setting you want.

Note
This is only valid for MHL-compatible devices supporting this function.

The Other Setup menu
The Other Setup menu is where you can make customized settings to reflect how you are using the receiver.
1 Press RECEIVER on the remote control, then press HOME MENU.
A Graphical User Interface (GUI) screen appears on your TV. Use †/ ‡ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2 Select ‘System Setup’ from the Home Menu.
3 Select ‘Other Setup’, then press ENTER.
4 Select the setting you want to adjust.
If you are doing this for the first time, you may want to adjust these settings in order:
• Auto Power Down – Sets the power to turn off automatically when the receiver is not being used (page 90).
• Volume Setup – Sets up the volume-related operations of this receiver (page 90).
• Remote Control Mode Setup – Sets this receiver's remote control mode (page 90).
• Software Update – Use to update the receiver’s software and check the version (page 90).
• ZONE Setup – Use to make the sub zone-related settings (page 91).
• On Screen Display Setup – Sets whether or not to display the status on the display when the receiver is operated (page 91).
• Play ZONE Setup – Select the zone for playing the audio contents of devices in the home network (page 91).
• Maintenance Mode – This is used to receive maintenance from a Pioneer service engineer or custom installer (page 91).
5 Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.
**Auto Power Down**

The power can be set to turn off automatically if no operation has been performed for a specific amount of time with no audio or video signals being input to the receiver. When using ZONE 2 or HDZONE, the ZONE 2 or HDZONE power can also be set to turn off, but for ZONE 2 or HDZONE the power turns off automatically after the amount of time set here even if signals are being input or operations have been performed. Different times can be set for the main zone, ZONE 2 and HDZONE.

1. **Select ‘Auto Power Down’ from the Other Setup menu.**
2. **Select the zone you want to set and set the time after which the power turns off.**
   - **MAIN** – The time can be selected from among “15 min”, “30 min”, “60 min” and “OFF”. The power turns off after there has been no signal and no operation for the selected time.
   - **ZONE 2** – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.
   - **HDZONE** – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.

**Note**
Depending on the connected devices, the Auto Power Down function may not work properly due to excessive noise or other reasons.

**Volume Setup**

You can set the maximum volume of this receiver or specify what the volume level will be when the power is turned on.

1. **Select ‘Volume Setup’ from the Other Setup menu.**
2. **Select the Power ON Level setting you want.**
   - **LAST** (default) – When the power is turned on, the volume is set to the same level as when the power was last turned off.
   - “---” – When the power is turned on, the volume is set to minimum level.
   - “-80.0dB” to “+12.0dB” – Specify the volume to be set when the power is turned on, in steps of 0.5 dB.
3. **Select the Volume Limit setting you want.**
   - Use this function to limit the maximum volume. The volume cannot be increased above the level set here, even by operating VOLUME button (or the dial on the front panel).
   - **OFF** (default) – The maximum volume is not limited.
   - “-20.0dB” to “-10.0dB” – The maximum volume is limited to the value set here.
4. **Select the Mute Level setting you want.**
   - This sets how much the volume is to be turned down when MUTE is pressed.
   - **FULL** (default) – No sound.
   - “-40.0dB” to “-20.0dB” – The volume will be turned down to the level specified here.
5. **When you’re finished, press RETURN.**
   - You will return to the Other Setup menu.

**Remote Control Mode Setup**

- **Default setting: 1**
  - This sets this receiver’s remote control mode to prevent erroneous operation when multiple units of the receiver are being used.
1. **Select ‘Remote Control Mode Setup’ from the Other Setup menu.**
2. **Select the Remote Control Mode setting you want.**
3. **Select ‘OK’ to change the remote control mode.**
4. **Follow the instructions on the screen to change the remote control’s setting.**
   - See Operating multiple receivers on page 73.
5. **When you’re finished, press RETURN.**
   - You will return to the Other Setup menu.

**Software Update**

Use this procedure to update the receiver’s software and check the version. There are two ways to update: via the Internet and via a USB memory device.

Updating via the Internet is performed by accessing the file server from the receiver and downloading the file. This procedure is only possible if the receiver is connected to the Internet. Updating via a USB memory device is performed by downloading the update file from a computer, reading this file onto a USB memory device then inserting this USB memory device into the USB port on the receiver’s front panel. With this procedure, the USB memory device containing the update file must first be inserted into the USB port on the receiver’s front panel.

- **If an update file is provided on the Pioneer website, download it onto your computer. When downloading an update file from the Pioneer website onto your computer, the file will be in ZIP format. Unzip the ZIP file before saving it on the USB memory device. If there are any old downloaded files or downloaded files for other models on the USB memory device, delete them.**
- **If an update file does not exist in the Pioneer’s website, updating the software for the receiver is not necessary.**

**Important**

- **DO NOT unplug the power cord during updating.**
- **When updating via the Internet, do not disconnect the LAN cable. When updating via a USB memory device, do not disconnect the USB memory device.**
- **If updating is interrupted before it is completed, start updating over from the beginning.**
- **The receiver’s settings may be reset when the software is updated. Information on the models for which the settings are reset is provided on the Pioneer website. Check the website before updating.**

1. **Select ‘Software Update’ from the Other Setup menu.**
2. **Select the update procedure.**
   - **Update via Internet** – The receiver checks whether updatable software is available via the Internet.
   - **Update via USB Memory** – The receiver checks whether the USB memory device inserted into the USB port on the receiver’s front panel contains updatable software.
   - “Accessing” is displayed and the update file is checked. Wait a while.
3. **Check on the screen whether or not an update file was found.**
   - If “New version found.” is displayed, the update file has been found. The version number and updating time are displayed.
   - If “This is the latest version. There is no need to update.” is displayed, no update file has been found.
4. **To update, select OK.**
   - The updating screen appears and updating is performed.
   - **The power turns off automatically once updating is completed.**
### Software Update messages

<table>
<thead>
<tr>
<th>Status messages</th>
<th>Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>FILE ERROR</td>
<td>Try disconnecting then reconnecting the USB device or storing the update file again. If the error still occurs, try using a different USB memory device. No update file was found on the USB memory device. Store the file in the USB memory device’s root directory.</td>
</tr>
<tr>
<td>UPDATE ERROR 1 to UPDATE ERROR 7</td>
<td>Turn the receiver’s power off, then turn it back on and try updating the software again. If this message flashes, updating has failed. Update via a USB memory device. Put the update file on a USB memory device and connect the device to the USB port. When the file is found, software updating starts automatically.</td>
</tr>
</tbody>
</table>

#### ZONE Setup

Switches the sub-zone setting.

1. Select ‘ZONE Setup’ from the Other Setup menu.
2. Select ‘MAIN/HDZONE’, then press ENTER.
3. Set the usage of the HDMI OUT 2 terminal.
   - MAIN: Select this to output the same input source as in the main zone. After setting this to MAIN, exit the home menu, then press HDMI OUT and select the terminal for HDMI output (page 70).
   - HDZONE: Use the HDMI output’s multizone function (HDZONE) to output an input source different from the one in the main zone (page 69).
4. When you’re finished, press RETURN.
   
   You will return to the Other Setup menu.

#### ZONE 2 setup

When making multi-zone connections using the AUDIO ZONE 2 OUT terminals and performing playback in Zone 2, you can set whether to adjust the Zone 2 volume on the receiver or to fix it to a specific volume: –40 dB Fixed or 0 dB Fixed. This is set to Variable upon shipment from the factory, allowing the volume to be adjusted on the receiver. If you would like to adjust the volume from the connected amplifier, make the setting below.

- This setting is not possible if multi-zone settings have been made using the speaker terminals and Speaker System is set to anything other than ZONE 2. In this case, adjust the volume for the sub zones on the receiver.

**CAUTION**

- Note that when Volume Level is set to 0 dB Fixed, the audio output from the AUDIO ZONE 2 OUT terminals is set to the maximum. Also, depending on the volume setting on the connected amplifier, large volumes may be produced even when Volume Level is set to –40 dB Fixed.

1. Select ‘ZONE Setup’ from the Other Setup menu.
2. Select ‘ZONE 2’, then press ENTER.

3. Select the Volume Level setting you want.
   - Variable (default) – The Zone 2 volume is adjusted from the receiver.
   - –40 dB Fixed/0 dB Fixed – The Zone 2 volume level output from the receiver is fixed to the value set here.
4. When you’re finished, press RETURN.
   
   You will return to the Other Setup menu.

#### On Screen Display Setup

When the receiver is operated, its status (the input name, listening mode, etc.) is displayed superimposed over the video output on the display. This status display can be turned off by switching this setting to OFF.

- Default setting: ON
1. Select ‘On Screen Display Setup’ from the Other Setup menu.
2. Select the On Screen Display setting you want.
3. When you’re finished, press RETURN.
   
   You will return to the Other Setup menu.

**Notes**

- The on-screen display is not displayed for video outputs from the HDMI OUT 2 and VIDEO MONITOR OUT terminals.
- Depending on the type of video input signal (4K, 3D, etc.), the on-screen display may not be displayed.
- The size of the characters displayed differs according to the output resolution.

#### Play ZONE Setup

Select the zone for playing the audio contents of devices in the home network when using in the DMR mode.

- For playable DLNA-compatible network devices, see page 55.
1. Select ‘Play ZONE Setup’ from the Other Setup menu.
2. Select the zone in which you want to play the audio contents.
3. When you’re finished, press RETURN.
   
   You will return to the Other Setup menu.

#### Maintenance Mode

Only use this if so instructed by a Pioneer service engineer or custom installer.
## Making network settings using Safari

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver's name (Friendly Name) (b) in Bookmark.
   
   If Bonjour list is not displayed, access the IP address "http://(the receiver's IP address)" from Safari.

   ![Image](image1.png)

3. Click IP, Proxy Setting.
4. Setup the network settings manually and then press Apply.

   ![Image](image2.png)

### Note

This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

## Using Safari to set a friendly name

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver's name (Friendly Name) (b) in Bookmark.
   
   If Bonjour list is not displayed, access the IP address "http://(the receiver's IP address)" from Safari.

3. Click Friendly Name.

   ![Image](image3.png)

### Note

This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

## Using Safari to update the firmware

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver's name (Friendly Name) (b) in Bookmark.
   
   If Bonjour list is not displayed, access the IP address "http://(the receiver's IP address)" from Safari.

3. Click Firmware Update.

   ![Image](image4.png)

4. Press Start.

   The firmware update prepare screen is displayed. If the screen does not switch automatically, click Click here.
5 Browse the latest firmware on your computer (a) and then press Upload (b).
Firmware files have the extension “fw”. Select a file with the extension “fw”.
The confirmation screen is displayed. If you continue the firmware update, press OK. Once the firmware update process starts, you cannot stop it. Wait until the file is uploaded (about one minute may be required depending on your LAN connection environment).

6 The firmware upload status screen is displayed.
“The upload process finished successfully.” will be shown when the update is completed.
Once updating is completed, the receiver’s power automatically turns off.

Note
This setting for the network has been confirmed for Mac OS X 10.7 and Safari 5.1.

Troubleshooting
Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest Pioneer authorized independent service company to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.
- If the problem is not solved after the troubleshooting below, if the screen freezes unexpectedly or if the buttons on the remote control or front panel stop working completely, do the following:
  - Press \( \text{STANDBY/ON} \) on the front panel to turn off the power, then turn the power back on.
  - If the power cannot be turned off, press and hold \( \text{STANDBY/ON} \) on the front panel for over 10 seconds. The power will turn off. In this case, the various settings made on the receiver may be cleared. (However, settings made when the power was turned off normally are not cleared.)

### Power

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power does not turn on.</td>
<td>Make sure that the power cord is plugged in to an active power outlet. Try disconnecting from the power outlet, then plugging back in.</td>
</tr>
<tr>
<td>Power cannot be turned off. (ZONE 2 ON is displayed.)</td>
<td>Press the remote control’s ZONE 2, then press ( \text{STANDBY/ON} ) to switch the sub zone off.</td>
</tr>
<tr>
<td>Power cannot be turned off. (HDZONE ON is displayed.)</td>
<td>Press the remote control’s HDZONE, then press ( \text{STANDBY/ON} ) to switch the sub zone off.</td>
</tr>
<tr>
<td>The receiver suddenly switches off or the iPod iPhone iPad indicator blinks.</td>
<td>Check that there are no loose strands of speaker wire touching the rear panel or another set of wires. If so, re-attach the speaker wires, making sure there are no stray strands. The receiver may have a serious problem. Disconnect from the power and call a Pioneer authorized independent service company.</td>
</tr>
<tr>
<td>During loud playback the power suddenly switches off.</td>
<td>Turn down the volume. Lower the 63 Hz and 125 Hz equalizer levels in the Manual MCACC setup on page 80. Switch on the digital safety feature. While holding down ( \text{ENTER} ) on the front panel, press ( \text{STANDBY/ON} ) to set this receiver to the standby mode. Use ( \text{TUNE} ) ( \uparrow ) ( \downarrow ) to select D.SAFETY ( \text{&lt;OFF&gt;} ), and then use ( \text{PRESET} ) ( \uparrow ) ( \downarrow ) to select 1 or 2 (select D.SAFETY ( \text{&lt;OFF&gt;} ) to deactivate this feature). If the power switches off even with 2 switched on, turn down the volume. With 1 or 2 on, some features may be unavailable. If there is very little low frequency information in the source material, change your speaker settings to Front: SMALL / Subwoofer: YES, or Front: LARGE / Subwoofer: PLUS (see Speaker Setting on page 86).</td>
</tr>
<tr>
<td>The unit does not respond when the buttons are pressed.</td>
<td>Try switching the receiver off, then back on again.</td>
</tr>
<tr>
<td>AMP ERR blinks in the display, then the power automatically switches off. The ADVANCED MCACC blinks and the power does not turn on.</td>
<td>The receiver may have a serious problem. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.</td>
</tr>
<tr>
<td>The receiver suddenly switches off or the FL OFF indicator blinks.</td>
<td>There is a problem with the receiver’s power unit or fan. Try turning on the power. If the same thing happens, the receiver is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company. (Other symptoms may appear when the power is turned on.)</td>
</tr>
</tbody>
</table>

### No sound

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>No sound is output when an input function is selected.</td>
<td>Make sure the correct input function is selected.</td>
</tr>
<tr>
<td>No sound is output from the front speakers.</td>
<td>Make sure the correct input signal is selected (press ( \text{MUTE} ) and speaker setting (press ( \text{SPEAKERS} )). Allow the unit to cool down in a well-ventilated place before switching back on (see Setting the Audio options on page 86). Check whether the cables used to connect the speakers are short-circuited. Wait at least 1 minute, then try turning the power on again. The temperature within the unit has exceeded the allowable value. Lower the volume level.</td>
</tr>
<tr>
<td>HDZONE cannot be turned on.</td>
<td>Set Output Setting at MAIN/HDZONE to HDZONE (page 9). The receiver suddenly power off or ADVANCED MCACC flashes. The power unit is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.</td>
</tr>
<tr>
<td>FAN STOP is displayed, then iPod iPhone iPad indicator blinks.</td>
<td>The built-in cooling fan is malfunctioning. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.</td>
</tr>
<tr>
<td>No sound from the surround or center speakers.</td>
<td>Check that the Stereo listening mode or the Front Stage Surround Advance mode isn’t selected; select one of the surround listening modes (see Enjoying various types of playback using the listening modes on page 54). Check that the surround center speakers are not set to NO (see Speaker Setting on page 86). Check that the channel level settings (see Channel Levels on page 51).</td>
</tr>
<tr>
<td>No sound from surround back speakers.</td>
<td>Check that the surround back speakers are set to LARGE or SMALL and the surround speakers are not set to NO (see Speaker Setting on page 86). Check the speaker connections (see Connecting the speakers on page 29).</td>
</tr>
<tr>
<td>No sound from surround back speakers.</td>
<td>Check that the surround back speakers are not connected. Check the speaker connections (see Connecting the speakers on page 29). If only one surround back speaker is connected, make sure it’s connected to the left channel speaker terminal. Surround back speakers will not play while the Speaker System is set to Speaker B and audio is being played through speaker B. When Speaker System is set to Normal(SB/FH) or Normal(SB/FW) and SP: FH ON or SP: FW ON is selected with the SPEAKERS button, no sound will be output from the surround back speakers. Select SP: SB/FH ON, SP: SB/FW ON or SP: SB ON (see Switching the speaker terminals on page 69).</td>
</tr>
<tr>
<td>Symptom</td>
<td>Remedy</td>
</tr>
<tr>
<td>----------------------------------------------</td>
<td>-------------------------------------------------------------------------</td>
</tr>
<tr>
<td>No sound from front height or front wide</td>
<td>Check that the front height or front wide speakers are set to LARGE or SMALL, and the surrounding speakers are set to NO (see Speaker Setting on page 69). When Speaker System is set to Normal(SB/FH) or Normal(SB/FW) and SP: SB ON is selected with the SPEAKERS button, no sound will be output from the front height or front wide speakers. Select SP: SB/FH ON, SP: SB/FW ON, SP: FH ON or SP: FW ON (see Switching the speaker terminals on page 69). Check the speaker connections (see Connecting the speakers on page 29).</td>
</tr>
<tr>
<td>speakers.</td>
<td></td>
</tr>
<tr>
<td>No sound from subwoofer.</td>
<td>Check that the subwoofer is connected properly, switched on and the volume turned up. If your subwoofer has a sleep function, make sure it is switched off. Make sure that the Subwoofer setting is YES or PLUS (see Speaker Setting on page 69). The crossover frequency may be set too low; try setting it higher to match the characteristics of your other speakers (see Speaker Setting on page 69). If there is very little low frequency information in the source material, change your speaker settings to Front: SMALL / Subwoofer: YES, or Front: LARGE / Subwoofer: PLUS (see Speaker Setting on page 69). Check that the LFE channel is not set to OFF, or to a very quiet setting (see Setting the LFE level on page 69). Check the speaker level settings (see Channel Level on page 67). Check the speaker level settings (see Channel Level on page 67). Check that the speaker hasn’t been set to NO (see Speaker Setting on page 69). The channel may not be recorded in the source. By using one of the advanced effect listening modes, you may be able to create the missing channel (see Enjoying various types of playback using the listening modes on page 85).</td>
</tr>
<tr>
<td>No sound from one speaker.</td>
<td>Check the speaker connection (see Connecting the speakers on page 29). Check the speaker level settings (see Channel Level on page 67). Check that the speaker hasn’t been set to NO (see Speaker Setting on page 69). The channel may not be recorded in the source. By using one of the advanced effect listening modes, you may be able to create the missing channel (see Enjoying various types of playback using the listening modes on page 85).</td>
</tr>
<tr>
<td>Sound is produced from analog components,</td>
<td>Check that the input signal type is set to DIGITAL (see Choosing the input signal on page 69). Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 39). Check the digital output settings on the source component. If the source component has a digital volume control, make sure this is not turned down.</td>
</tr>
<tr>
<td>but not from digital ones (DVD, LD, CD, etc.).</td>
<td></td>
</tr>
<tr>
<td>No sound is output or a noise is output</td>
<td>Check that your BD or DVD player is compatible with Dolby Digital/DTS discs. Check the digital output settings or the HDMI audio output settings of your BD or DVD player. Make sure that the DTS signal output is set to On. If the source component has a digital volume control, make sure this is not turned down.</td>
</tr>
<tr>
<td>when Dolby Digital/DTS software is played</td>
<td></td>
</tr>
<tr>
<td>back.</td>
<td></td>
</tr>
<tr>
<td>No sound when using the HOME MENU.</td>
<td>If the HDMI input function is selected, sound is muted until exiting the HOME MENU.</td>
</tr>
</tbody>
</table>
FAQ

**ADAPTER PORT terminal**

**Symptom**
The Bluetooth wireless technology device cannot be connected or operated. Sound from the Bluetooth wireless technology device is not emitted or the sound is interrupted.

**Remedy**
Check that no object that emits electromagnetic waves in the 2.4 GHz band (microwave oven, wireless LAN device or Bluetooth wireless technology apparatus) is near the unit. If such an object is near the unit, set the unit far from it. Or, stop using the object emitting the electromagnetic waves.

Check that the Bluetooth wireless technology device is not too far from the unit and that obstructions are not set between the Bluetooth wireless technology device and the unit. Set the Bluetooth wireless technology device and the unit so that the distance between them is less than about 10 m (33 ft.) and no obstructions exist between them.

Check that the Bluetooth ADAPTER and the ADAPTER PORT of the unit are correctly connected.

The Bluetooth wireless technology device may not be set to the communication mode supporting the Bluetooth wireless technology. Check the setting of the Bluetooth wireless technology device.

Check that pairing is correct. The pairing setting was deleted from this unit or the Bluetooth wireless technology device.

Check that the profile is correct. Use a Bluetooth wireless technology device that supports A2DP profile and AVRCP profile.

Disconnect the iPod from this receiver (see Air Jam on page 99).

The Air Jam function cannot be used.

---

**Video**

**Symptom**
No image is output when an input is selected.

**Remedy**
Check the video connections of the source component.

For HDMI, or when V.CONV is set to OFF and a TV and another component are connected with different cords (see Setting the Video options on page 67), you must connect your TV to this receiver using the same type of video cable as you used to connect your video component. For the component video input, however, signals are only output from the HDMI output, so when using the component video input, set V.CONV to ON.

Make sure the input assignment is correct for components connected using component video or HDMI cables (see Setting the Input Setup menu on page 67).

Check the video output settings of the source component.

Some components (such as video game units) have resolutions that may not be compatible with the receiver’s Resolution setting (see Setting the Video options on page 67) and/or the resolution settings on your component or display doesn’t work. Try switching V.CONV (in Setting the Video options on page 67) to OFF.

Check that the video input you selected on your TV is correct.

Can’t record video.

Check that the source is not copyright-protected.

The video converter is not available when making recordings. Check that the same type of video cable is used for connecting both the recorder and the video source (the one you want to record) to this receiver.

Noisy, intermittent, or distorted picture.

Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again.

---

**Symptom**
Video signals are not output from the component terminal.

**Remedy**
When a monitor only compatible with resolutions of 480i is connected to the component terminal and another monitor is connected to the HDMI terminal, the video signals may not be output to the monitor connected to the component terminal. If this happens, do the following:
- Turn off the power of the monitor connected to the HDMI terminal.
- Change the VIDEO PARAMETER menu RES setting (see Setting the Video options on page 67).
- Video signals from the HDMI terminal cannot be output to the component terminals. Input the video signals from the player or other source to the composite or component terminals. When using the component terminal, assign it at Input Setup (see The Input Setup menu on page 29).

The picture’s movement is unnatural.

When Resolution under VIDEO PARAMETER is set to 1080/24p, the picture may not be displayed properly for some source materials. In this case, set the resolution to something other than 1080/24p (page 62).

---

**Settings**

**Symptom**
The Auto MCACC Setup continually shows an error.

**Remedy**
The ambient noise level may be too high. Keep the noise level in the room as low as possible (see also Problems when using the Auto MCACC Setup on page 99). If the noise level cannot be kept low enough, you will have to set up the surround sound manually (page 98).

When using only one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.

To use a 5.1-channel speaker set, use the surround speakers for the surround channel, not the surround back channel.

Make sure there are no obstacles between the speakers and the microphone.

If Reverse Phase is displayed, try the following:
- The speaker’s wiring (+ and -) may be inverted. Check the speaker connections.
- Depending on the type of speakers and their installation conditions, Reverse Phase may be displayed even if the speakers are properly connected. If this happens, select GO NEXT and continue.
- If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), it may not be possible to properly identify the polarity.

After using the Auto MCACC Setup, the speaker size setting is incorrect.

There may have been some low frequency noise in the room from an air-conditioner, motor, etc. Switch off all other appliances in the room and use Auto MCACC Setup again.

Depending on a number of factors (bass reproduction capabilities of the speakers, room size, speaker placement, etc.) this may occur in some cases. Change the speaker setting manually in Speaker Setting on page 56, and use the ALL (Keep SP System) option for the Auto MCACC menu in Automatic MCACC (Expert) on page 52 if this is a recurring problem.

Can’t adjust the Fine Speaker Distance setting properly.

Check that the speakers are all in phase (make sure the positive (+) and negative (-) terminals are matched up properly).

The display shows KEY LOCK ON when you try to make settings.

With the receiver in standby, press STANDBY/ON for about 5 seconds while holding down SPEAKERS to disable the key lock.

The power cord was disconnected from the wall while adjusting this setting.

Settings are only stored if all the zones are turned off. Turn off all the zones before unplugging the power cord.

Can’t record video.

Some components (such as video game units) have resolutions that may not be compatible with the receiver’s Resolution setting (see Setting the Video options on page 67) and/or the resolution settings on your component or display doesn’t work. Try switching V.CONV (in Setting the Video options on page 67) to OFF.

Check the video connections of the source component.

Make sure the input assignment is correct for components connected using component video or HDMI cables (see Setting the Input Setup menu on page 67).

Check the video output settings of the source component.

Check that the video input you selected on your TV is correct.

Some components (such as video game units) have resolutions that may not be compatible with the receiver’s Resolution setting (see Setting the Video options on page 67) and/or the resolution settings on your component or display doesn’t work. Try switching V.CONV (in Setting the Video options on page 67) to OFF.

Check that the video input you selected on your TV is correct.

Can’t record video.

Check that the source is not copyright-protected.

The video converter is not available when making recordings. Check that the same type of video cable is used for connecting both the recorder and the video source (the one you want to record) to this receiver.

Noisy, intermittent, or distorted picture.

Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again.
### FAQ

#### Display

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The display is dark or off.</td>
<td>Press DIMMER repeatedly to select a different brightness.</td>
</tr>
<tr>
<td>The OSD screen is not displayed.</td>
<td>The on-screen display is not displayed unless the receiver’s HDMI OUT 1 terminal and the TV are connected with an HDMI cable. If the TV does not support HDMI, perform the operations and make the settings watching the display on the receiver’s front panel. Depending on the type of video input signal (4K, 3D, etc.), the on-screen display may not be displayed.</td>
</tr>
<tr>
<td>You can’t get DIGITAL to display when using SIGNAL SEL.</td>
<td>Check the digital connections and make sure that the digital inputs are assigned correctly (see The Input Setup menu on page 59).</td>
</tr>
<tr>
<td>※ DIGITAL or DTS does not light when playing Dolby/DTS software.</td>
<td>These indicators do not light if playback is paused. Check the playback (especially the digital output) settings of the source component.</td>
</tr>
</tbody>
</table>

#### Professional Calibration EQ graphical output

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The reverb characteristics graph after EQ calibration does not appear entirely flat.</td>
<td>There are cases where the graph does not appear flat (even when selecting ALL CH ADJ in the Auto MCACC Setup) due to adjustments made to compensate for room characteristics to achieve optimal sound. Areas of the graph may appear identical (before and after) when there is little or no adjustment needed. The graph may appear to have shifted vertically when comparing before and after measurements.</td>
</tr>
<tr>
<td>EQ adjustments made using the Manual MCACC setup do not appear to change the reverb characteristics graph after EQ calibration.</td>
<td>Despite level adjustments being made, the filters used for analysis may not display these adjustments in the reverb characteristics graph after EQ calibration. However, these adjustments are taken into account by the filters dedicated to overall system calibration. Low frequencies used in bass management (the subwoofer channel) will not change for speakers that have been specified as SMALL in the configuration, or do not output these frequencies. Calibration is performed, but due to your speakers’ low frequency limitations, no measurable sound is output for display.</td>
</tr>
</tbody>
</table>

#### Remote control

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot be remote controlled.</td>
<td>Press RECEIVER on the remote control to switch to the receiver control mode. Set the remote control unit’s remote control mode so that it matches the setting on the main unit (see Operating multiple receivers on page 73). Check whether the receiver’s remote control mode is properly set (see Remote Control Mode Setup on page 56). Try replacing the batteries in the remote control (see Loading the batteries on page 9). Be sure to operate within 7 m (23 ft.) and a 30º angle of the remote sensor on the front panel (see Operating range of remote control unit on page 9). Check that there are no obstacles between the receiver and the remote control. Make sure that there is no fluorescent or other strong light shining on to the remote sensor. Other components can’t be operated with the system remote. If the battery ran down, the preset codes may have been cleared. Re-enter the preset codes. The preset code may be incorrect. Redo the procedure for entering preset codes. When commands from the remote control units of other devices are registered using the learning function, in some cases they may not be learned properly. In this case, register the commands again using the learning function (see page 72). If they still do not work, they may be in a special format that cannot be registered on this receiver’s remote control. Operate the device using another remote control.</td>
</tr>
</tbody>
</table>
### FAQ

#### HDMI

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The HDMI indicator blinks continuously.</td>
<td>Check all the points below.</td>
</tr>
<tr>
<td>No picture or sound.</td>
<td>This receiver is HDCP-compatible. Check that the components you are connecting are also HDCP-compatible. If they are not, please connect them using the component or composite video jacks. Depending on the connected source component, it’s possible that it will not work with this receiver (even if it is HDCP-compatible). In this case, connect using the component or composite video jacks between source and receiver. If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.</td>
</tr>
<tr>
<td>If video images do not appear on your TV, try adjusting the resolution, Deep Color or other setting for your component.</td>
<td>While analog video signals are being output over HDMI, use a separate connection for audio output. To output signals in Deep Color, use an HDMI cable (High Speed HDMI®/TM Cable) to connect this receiver to a component or TV with the Deep Color feature. Influence from a TV whose power is set to standby may cause the picture or sound not to be produced or to be broken. In this case, press HDMI OUT and switch so that the HDMI output to which that TV is connected is not selected.</td>
</tr>
<tr>
<td>No picture.</td>
<td>Try changing the Resolution setting (in Set the Video options, see page 63). To use the HDMI OUT 2 terminal in the main zone, set the MAIN/HDZONE Output Setting to MAIN (see page 93).</td>
</tr>
<tr>
<td>No sound or sound suddenly ceases.</td>
<td>Check that the HDMI Audio setting is set to AMP (Setting the Audio options, see page 63). If the component is a DVI device, use a separate connection for the audio. If analog video is being output over HDMI, please use a separate connection for the audio. Check the audio output settings of the source component. HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback. Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.</td>
</tr>
<tr>
<td>Noisy or distorted picture.</td>
<td>Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again.</td>
</tr>
<tr>
<td>If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.</td>
<td>Check whether or not the connected component is compatible with HDCP. If it is not compatible with HDCP, reconnect the source device using a different type of connection (component or composite). Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video, this is not a malfunction.</td>
</tr>
<tr>
<td>HDCP ERROR shows in the display.</td>
<td>Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again.</td>
</tr>
</tbody>
</table>

#### MHL

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Synchronized operation not possible using Control with HDMI function.</td>
<td>Check the HDMI connections. The cable may be damaged. Select ON for the Control Mode with HDMI setting (see HDMI Setup on page 61). Turn the TV’s power on before turning on this receiver’s power. Set the TV side Control with HDMI setting to on (see TV’s operating instructions). Connect the TV to the HDMI OUT 1 terminal and set the HDMI output to OUT 1. Turn on first the TV’s power, then this receiver’s power. When HDZONE is set to ON, the video resolution and number of audio channels for the main zone side changes. This is due to the HDMI connection specifications; it is not a malfunction. When playing the same input in the main zone and HDZONE, video and audio signals that can be output in common for all the devices connected to the HDMI OUT 1 and HDMI OUT 2 (HDZONE) terminals are set.</td>
</tr>
<tr>
<td>HDZONE cannot be turned on.</td>
<td>Set Output Setting at MAIN/HDZONE to HDZONE (page 93). When the input source for the main or HD zone is switched or when the power of the respective zones is turned on and off, the audio or video of the HDMI output terminal that is not being operated is sometimes interrupted. This is because the HDMI devices need to recognize each other again. This is not a malfunction. If the picture is distorted or not displayed, turn off the power of the devices in all the zones, then try again. Also try temporarily turning the Network Standby and Standby Through settings OFF.</td>

</table>

### Installation of AVNavigator

1. If other applications are running on the computer, quit those applications before installing.
2. If the problem persists, restart the computer and install with no other applications running.
### FAQ

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Causes</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>AVNavigator does not interact well with the receiver.</td>
<td>The receiver’s power is not turned on.</td>
<td>Turn the receiver’s power on. (Wait about 60 seconds after the power turns on for network functions to start.) After this, press Detection in AVNavigator to redetect the receiver. To turn this unit’s power on and off from the Interactive Manual, set Network Standby at HOME MENU → System Setup → Network Setup to ON.</td>
</tr>
<tr>
<td></td>
<td>The receiver or computer is not connected to the LAN.</td>
<td>Connect a LAN cable to the receiver or computer ([page 33]). After this, press Detection in AVNavigator to redetect the receiver.</td>
</tr>
<tr>
<td></td>
<td>The router’s power is off.</td>
<td>Turn the router’s power on. After this, press Detection in AVNavigator to redetect the receiver.</td>
</tr>
<tr>
<td></td>
<td>AVNavigator’s network settings are not correct.</td>
<td>If your router does not support DHCP or UPnP, the receiver’s IP address must be set in AVNavigator. First set the IP address on the receiver, then set the same address in AVNavigator ([page 33]). After this, press Detection in AVNavigator to redetect the receiver.</td>
</tr>
<tr>
<td></td>
<td>Network connections could be restricted due to the computer’s network settings, security settings, etc.</td>
<td>Check the computer’s network settings, security settings, etc. After this, press Detection in AVNavigator to redetect the receiver.</td>
</tr>
<tr>
<td></td>
<td>When the operating instructions interactive mode is changed, the settings may not be transferred to the browser, causing AVNavigator to stop interacting.</td>
<td>Either refresh the page’s display using the browser’s refresh button or display a different page from the links so that the setting is transferred.</td>
</tr>
<tr>
<td>When the WiringNavi OperationGuide or Glossary is launched, a warning about security protection appears on the browser.</td>
<td>This is because of the browser’s security function.</td>
<td>This is not a problem. Perform the operation to authorize the blocked contents.</td>

FAQ

**Network cannot be accessed via wireless LAN.**

**Symptoms**
- Network connections cannot be made via the wireless LAN converter (AS-WL300).
- Receiver settings cannot be displayed on browser.
- The web control screen is not made from a browser.
- Wireless LAN converter cannot be made via the network connections screen.

**Causes**
- Wireless LAN router, etc.
- Network connections cannot be established between the wireless LAN converter and base unit (wireless LAN router, etc.).
- Multiple wireless LAN converters are connected to the wireless LAN router.
- LAN router, etc.

**Remedies**
- For details, see Wireless LAN on page 109.
- Check the receiver’s IP address and enter it correctly in the browser (page 89).
- Enable JavaScript.
- Use an internet browser that is compatible with JavaScript.
- Use an internet browser that is compatible with JavaScript.
- If the IP addresses of the receiver and wireless LAN converter (including the DHCP setting) do not match the settings of the wireless LAN router, etc., then change the settings of the wireless LAN converter.
- Set the "249" in "192.168.1.249" to a number between 2 and 249 that is not assigned to other devices.
- Set the "XXX" in "192.168.1.XXX" to a number between 2 and 248 that is not assigned to other devices.
- Set the "249" in "192.168.1.249" to a number between 2 and 249 that is not assigned to other devices.
- Try making the wireless LAN converter’s advanced settings.
- The wireless LAN converter can be connected to a computer to make the advanced wireless LAN settings.
- For details, see the CD-ROM included with the wireless LAN converter.

**Web Control**

**Symptoms**
- Web Control screen is not displayed on browser.
- Receiver settings cannot be made from a browser.

**Causes**
- This receiver’s IP address has not been entered into the browser correctly.
- JavaScript is disabled on the internet browser.
- The browser is not compatible with JavaScript.

**Remedies**
- Check the receiver’s IP address and enter it correctly in the browser (page 89).
- Enable JavaScript.
- Use an internet browser that is compatible with JavaScript.

**Wireless LAN**

**Network cannot be accessed via wireless LAN.**

- Wireless LAN converter’s power is not on. (Wireless LAN converter’s “Power”, “WPS” and “Wireless” indicators are not all lit.)
- Check that the USB cable connecting the wireless LAN converter to the receiver’s DC OUTPUT for WIRELESS LAN terminal is properly connected.
- WLAN POW ERR is displayed on the receiver’s display window.
- There is a problem with the wireless LAN converter’s power supply. Turn the receiver’s power off, then disconnect the USB cable, reconnect the USB cable and turn the receiver’s power back on.
- If WLAN POW ERR is still displayed after repeating the above procedure several times, there is a problem with the receiver or the USB cable. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

**Symptoms**
- The network cable is not firmly connected.
- The LAN cable is not firmly connected.
- The LAN cable is not firmly connected.
- The LAN cable is not firmly connected.

**Causes**
- The LAN cable is not firmly connected.
- The LAN cable is not firmly connected.
- The LAN cable is not firmly connected.
- The LAN cable is not firmly connected.

**Remedies**
- Check that the receiver’s IP address and enter it correctly in the browser (page 89).
- Enable JavaScript.
- Use an internet browser that is compatible with JavaScript.
- Set the "249" in "192.168.1.249" to a number between 2 and 249 that is not assigned to other devices.
- Set the "XXX" in "192.168.1.XXX" to a number between 2 and 248 that is not assigned to other devices.
- Set the "249" in "192.168.1.249" to a number between 2 and 249 that is not assigned to other devices.
- Try making the wireless LAN converter’s advanced settings.
- The wireless LAN converter can be connected to a computer to make the advanced wireless LAN settings.
- For details, see the CD-ROM included with the wireless LAN converter.

The access point is set to conceal the SSID.

- In this case, the SSID may not be displayed on the access point list screen. If not, set the SSID, etc., by making the wireless LAN converter settings on the receiver manually.

**Network connections cannot be established even when the above measures are taken.**

- Release the reset button.
- Press the wireless LAN converter’s reset button for at least 3 seconds.
- Release the reset button.

When the wireless LAN converter is restarted, the resetting procedure is completed.

Surround sound formats

Below is a brief description of the main surround sound formats you’ll find on BDs, DVDs, satellite, cable and terrestrial broadcasts, and video cassettes.

Dolby

The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

DTS

The DTS technologies are explained below. See http://www.dts.com for more detailed information.

About HDMI

HDMI (High-Definition Multimedia Interface) is a digital transfer standard for receiving video and audio data with a single cable. It is an adaptation of DVI (Digital Visual Interface), a display connection technology, for use in home audio devices. This interface standard is for next-generation TVs providing High-bandwidth Digital Content Protection (HDCP).

HTC Connect

HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.
About iPod

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion, and Mac and PC with iTunes 10.2.2 or later.

Bluetooth technology works with iPhone 5, iPhone 4S, iPhone 4, iPhone 3GS, iPhone 3G, iPod, iPad (3rd and 4th generation), iPad 2, iPod, iPod mini, and iPod touch (2nd through 5th generation).

USB works with iPhone 5, iPhone 4S, iPhone 4, iPhone 3GS, iPhone 3G, iPod, iPad (3rd and 4th generation), iPad 2, iPad, iPod mini, iPod touch (1st through 5th generation) and iPod nano (3rd through 7th generation).

“Made for iPod,” “Made for iPhone,” and “Made for iPad” mean that an electronic accessory has been designed to connect specifically to iPod, iPhone, or iPad, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod, iPhone, or iPad may affect wireless performance.

Apple, AirPlay, iPad, iPhone, iPod, iPod nano, iPod touch, iTunes, Safari, Bonjour, Mac, Macintosh, Mac OS and OS X are trademarks of Apple Inc., registered in the U.S. and other countries.

The AirPlay logo is a trademark of Apple Inc.

Windows 7

Windows and the Windows logo are trademarks of the Microsoft group of companies.

MHL

MHL, the MHL Logo, and Mobile High-Definition Link are trademarks or registered trademarks of MHL, LLC in the United States and other countries.

Speaker Setting Guide

In order to achieve an even better surround effect, it is important to accurately position the speakers and make their volume and tone characteristics uniform so as to finely focus the multi-channel sound.

The three major elements in positioning the speakers are distance, angle and orientation (the direction in which the speakers are pointing).

**Distance**: The distance of all the speakers should be equal.
**Angle**: The speakers should be horizontally symmetrical.
**Orientation**: The orientation should be horizontally symmetrical.

In most homes, however, it is not possible to achieve this environment. For the distance, on this receiver it is possible to automatically correct the speaker distance electrically to a precision of 1 cm (0.4 inch) using the Full Auto MCACC Setup function (page 38).

**Step 1: Speaker layout and distance adjustment**

Use speaker stands or the like to make sure the speakers are steady, and leave at least 10 cm (4 inches) from the surrounding walls. Position the speakers attentively so that the speakers on the left and right are at equal angles from the listening position (center of the adjustments). (We recommend using cords, etc., when adjusting the layout.) Ideally all the speakers should be equidistant from the listening position.

**Note**

If the speakers cannot be set at equal distances (on a circle), use the Auto MCACC Setup speaker distance correction and Fine Speaker Distance functions to make them equalize the distance artificially.

**Step 2: Adjusting the speaker height**

Adjust the heights (angles) of the different speakers. Adjust so that the front speaker units reproducing mid- and high frequencies is roughly at the height of the ears. If the center speaker cannot be set at the same height as the front speakers, adjust its angle of elevation to point it to the listening position. Set surround speaker 1 so that it is not under the height of the ears.

**Step 3: Adjusting the speaker orientation**

If the left and right speakers are not pointing in the same direction, the tone will not be the same on the right and left, and as a result the sound field will not be reproduced properly. However, if all the speakers are pointed towards the listening position, the sound field will seem cramped. Testing by the Pioneer Multi-channel Research Group has shown that a good sense of sound positioning can be achieved by pointing all the speakers towards an area 30 cm (12 inches) to 80 cm (31 inches) behind the listening position (between the surround speakers and the listening position).

However, the sense of sound positioning can differ according to the conditions in the room and the speakers being used. In smaller environments in particular (when the front speakers are close to the listening position), with this method the speakers will be pointed too inward. We suggest you use this example of installation as reference when trying out different installation methods.

**Step 4: Positioning and adjusting the subwoofer**

Placing the subwoofer between the center and front speakers makes even music sources sound more natural (if there is only one subwoofer, it doesn’t matter if it is placed on the left or right side). The low bass sound output from the subwoofer is not directional and there is no need to adjust the height. Normally the subwoofer is placed on the floor. Put it in a position at which it will not cancel out the bass sound output from the other speakers.
Also note that placing it near a wall may result in sympathetic vibrations with the building that could excessively amplify the bass sound.

If the subwoofer must be installed near a wall, place it at an angle so that it is not parallel to the wall surface. This can help reduce any sympathetic vibrations, but depending on the shape of the room this could result in standing waves. However, even if standing waves are generated, their influence on the sound quality can be prevented using the Auto MCACC’s standing wave control function (page 81).

**Step 5: Default settings with the Auto MCACC Setup (auto sound field correction) function**

It is more effective to perform the Full Auto MCACC Setup (page 38) procedure once the adjustments described above have been completed.

**Note**

The distance to the subwoofer may be slightly larger than the distance actually measured with a tape measure, etc. This is because this distance is corrected for electric delay, and is not a problem.

**Positional relationship between speakers and monitor**

**Position of front speakers and monitor**

The front speakers should be as equidistant as possible to the monitor.

**Position of center speaker and monitor**

Since mostly dialogs are output from the center speaker, keeping the center speaker as close as possible to the screen makes the overall sound more natural. For TVs using Braun tubes, however, when installing the center speaker on the floor, adjust its angle of elevation to point it towards the listening position.

- If the center speaker is not of the shielded type, install it away from the TV.
- When installing the center speaker on top of the monitor, place it facing slightly downwards towards the listening position.

Important information regarding the HDMI connection

There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI-equipped component you are connecting—check with the manufacturer for HDMI compatibility information).

If you aren’t receiving HDMI signals properly through this receiver (from your component), please try one of the following configurations when connecting up.

Configuration A

Use component video cables to connect the video output of your HDMI-equipped component to the receiver’s component video input. The receiver can then convert the analog component video signal to a digital HDMI signal for transmission to the display. For this configuration, use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections.

⚠️ Note

The picture quality will change slightly during conversion.

Configuration B

Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

⚠️ Notes

- If your display only has one HDMI terminal, you can only receive HDMI video from the connected component.
- Depending on the component, audio output may be limited to the number of channels available from the connected display unit (for example audio output is reduced to 2 channels for a monitor with stereo audio limitations).
- If you want to switch the input function, you’ll have to switch functions on both the receiver and your display unit.
- Since the sound is muted on the display when using the HDMI connection, you must adjust the volume on the display every time you switch input functions.

Cleaning the unit

- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
- Never use thinners, benzene, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.
Glossary

Audio formats/Decoding

**Dolby**
The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

**Dolby Digital**
A multichannel digital audio coding system widely used in cinemas, and in the home for DVD and digital broadcast soundtracks.

**Dolby TrueHD**
Dolby TrueHD is the lossless encoding technology developed for high-definition optical discs in the upcoming era.

**Dolby Digital Plus**
The audio technology for all high-definition programming and media. It combines the efficiency to meet future broadcast demands with the power and flexibility to realize the full audio potential expected in the upcoming high-definition era.

**Dolby Digital Surround EX**
Dolby Digital Surround EX (the EX stands for E Xtended) is an extension of Dolby Digital encoding whereby a surround back channel is integrated into the surround left/right channels for 6.1 channel playback. This allows for compatibility with Dolby Digital 5.1 channel decoding, as well as for decoding using Dolby Digital EX.

**Dolby Pro Logic IIx and Dolby Surround**
Dolby Pro Logic IIx is an improved version of the Dolby Pro Logic II (and Dolby Pro Logic) decoding system. Dolby Surround is an encoding system which embeds surround sound information within a stereo soundtrack, which a Dolby Pro Logic decoder can then use for enhanced surround sound listening with greater sound detail.

**Dolby Pro Logic IIZ**
Adding a pair of speakers above the front left and right speakers adds expressiveness in the vertical direction to the previous horizontally-oriented sound field. The height channel strengthens the sound field’s sense of three-dimensionality and air, producing presence and expansion.

**DTS**
The DTS technologies are explained below. See http://www.dts.com for more detailed information.

**DTS Digital Surround**
DTS Digital Surround is a 5.1-channel audio coding system from DTS Inc. now widely used for DVD-Video, DVD-Audio, 5.1 music discs, digital broadcasts, and video games.

**DTS-HD Master Audio**
DTS-HD Master Audio is a technology that delivers master audio sources recorded in a professional studio to listeners without any loss of data, preserving audio quality.

**DTS-HD High Resolution Audio**
A high definition audio technology by which signals can be transferred over HDMI cables.

**DTS-ES**
DTS-ES (the ES stands for Extended Surround) is a decoder that is capable of decoding both DTS-ES Discrete 6.1 and DTS-ES Matrix 6.1 encoded sources.

**DTS Neo:X**
DTS Neo:X can generate 11.1 channel surround sound from any matrixed stereo source (such as video or TV) and from 5.1 channel sources.

**Decoding**
A technology for converting digital signals that have been compressed upon recording by a digital signal processing circuit, etc., into the original signals. The term “decoding” (or “matrix decoding”) is also used for the technology which converts 2-channel sound sources into multiple channels or expands 5.1-channel signals into 6.1 or 7.1 channels.

**Calibrating the sound field/Improving the sound quality**

**Phase Control**
The Phase Control technology incorporated into this receiver’s design provides coherent sound reproduction through the use of phase matching for an optimal sound image at your listening position.

**Phase Control Plus (Auto Phase Control Plus)**
Corrects the delay in the contents’ low frequency effects (LFE). When properly corrected, the bass sound is more powerful, improving the balance of the sound.

When **AUTO** is selected, the contents are analyzed in real time, allowing them to be played in optimal conditions. This is effective for contents with low frequency effects (LFE), such as Dolby Digital 5.1-channel contents.

**Virtual Speakers**
Virtual playback of a maximum of 11.2 channels combining the actually installed speakers and the virtual speakers is possible. This makes for smoother connection between the sounds and an improved 3D feel.

**Virtual Surround Back**
When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information.

**Virtual Height**
When you’re not using front height speakers, selecting this mode allows you to hear a virtual front height channel through your front speakers.

**Virtual Wide**
When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers.

**Virtual Depth**
When this mode is selected, the sound field expands virtually to behind the display, resulting in a sound field with the same depth as the 3D picture to achieve a better sense of presence.

**Auto Sound Retriever**
The Auto Sound Retriever feature employs DSP technology to restore sound pressure and smooth jagged artifacts left over after compression.

With some audio inputs, the Sound Retriever effect is automatically optimized based on the bitrate information of the contents that have been input to achieve high sound quality.

**Sound Retriever Air**
Sound Retriever Air compensates for reduced sound quality due to compression when sending Bluetooth signals.

**PQLS**
Jitterless high quality playback is possible by connecting a PQLS-compatible player with HDMI connections.

**ALC (Auto Level Control)**
In the Auto level control (ALC) mode, this receiver equalizes playback sound levels.

Also, the low and high frequency sounds, dialogs, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.
Front Stage Surround Advance
With the Front Stage Surround Advance feature, you can enjoy seamless, natural surround sound effects using only the front speakers, without deteriorating the quality of the original sound.

MCACC
The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.

HDMI
Control with HDMI function
Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

ARC (Audio Return Channel)
When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT terminal. The sound of the TV can be input from the receiver’s HDMI OUT terminal, so connection with the TV can be completed with a single HDMI cable.

Network function
AirPlay
AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion, and Mac and PC with iTunes 10.2.2 or later.
For more information, see the Apple website (http://www.apple.com).

DLNA
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

vTuner
vTuner is a paid online database service that allows you to listen to radio and TV broadcasts on the Internet. vTuner lists thousands of stations from over 100 different countries around the globe. For more detail about vTuner, visit the following website: http://www.radio-pioneer.com

“This product is protected by certain intellectual property rights of NEMS and BridgeCo. Use or distribution of such technology outside of this product is prohibited without a license from NEMS and BridgeCo or an authorized subsidiary.”

aacPlus
AAC decoder uses aacPlus developed by Coding Technologies. (www.codingtechnologies.com)

Apple Lossless (ALAC)
“ALAC” stands for Apple Lossless Audio Codec. This is a lossless type audio codec and is used for example for iTunes®. It compresses non-compressed files (such as WAV and AIFF) to about one half the original size with no loss of sound quality.

FLAC
FLAC (Free Lossless Audio Codec) is an audio format allows lossless codec. Audio is compressed in FLAC without any loss in quality. For more details about FLAC, visit the following website: http://flac.sourceforge.net/

Windows Media
Windows Media is a multimedia framework for media creation and distribution for Microsoft Windows. Windows Media is either a registered trademark or trademark of Microsoft Corporation in the U.S. and/or other countries. Use an application licensed by Microsoft Corporation to author, distribute, or play Windows Media formatted content. Using an application unauthorized by Microsoft Corporation is subject to malfunction.

Windows Media Player 11/Windows Media Player 12
Windows Media Player is software to deliver music, photos and movies from a Microsoft Windows computer to home stereo systems and TVs.
With this software, you can play back files stored on the PC through various devices wherever you like in your home.
This software can be downloaded from Microsoft’s website.
- Windows Media Player 11 (for Windows XP or Windows Vista)
- Windows Media Player 12 (for Windows 7)
For more information check the official Microsoft website.

Router
A device for relaying data flowing on a network to another network. In homes, routers often also function as DHCP servers. Products with built-in wireless LAN access points are called “wireless LAN routers”.

DHCP
Abbreviation of Dynamic Host Configuration Protocol. A protocol for automatically assigning such setting information as IP addresses within network connections. This offers convenience in that, when enabled, it allows network functions to be used simply by connecting the devices to the network.

Wireless LAN/Wi-Fi
“Wi-Fi” (Wireless Fidelity) is a trademark coined by the Wi-Fi Alliance trade association to increase recognition of wireless LAN standards. With the increase in the number of devices connected to computers in recent years, Wi-Fi offers the advantage of eliminating the complexity of making connections with LAN cables by using wireless connection. As a way of reassuring users, products that have passed interoperability tests carry the logo “Wi-Fi Certified” to indicate that compatibility is assured.

WPS
Abbreviation of Wi-Fi Protected Setup. A standard established by the Wi-Fi Alliance industry group for a function allowing settings related to interconnection of WPS-compatible wireless LAN devices and encryption to be made with simple operations. There are a number of methods, including push-button configuration and PIN code configuration. This AV receiver supports both push-button configuration and PIN code configuration.

SSID
Abbreviation of Service Set Identifier. A wireless LAN access point identifier. Can be set as desired using up to 32 characters of English letters and numbers.
**Bluetooth function**

**Bluetooth wireless technology**
A short-range wireless communications standard for digital devices. Information is exchanged between devices several meters to several tens of meters apart using radio waves. It uses radio waves on the 2.4 GHz band which does not require applications for licenses or usage registration for applications conducting wireless exchange of digital information at relatively low speeds, such as computer mice and keyboards, mobile phones, smartphones, text and audio information for PDAs, etc.

**Pairing**
“Pairing” must be done before you start playback of Bluetooth wireless technology content using the Bluetooth ADAPTER. Make sure to perform pairing the first time you operate the system or any time pairing data is cleared.

- The pairing step is necessary to register the Bluetooth wireless technology device to enable Bluetooth communications. For more details, see also the operating instructions of your Bluetooth wireless technology device.
- Pairing is required when you first use the Bluetooth wireless technology device and Bluetooth ADAPTER.
- To enable Bluetooth communication, pairing should be done with both your system and Bluetooth wireless technology device.

**Receiver function**

**Operation Mode**
This receiver is equipped with a great number of functions and settings. The Operation Mode feature is provided for users who find it difficult to master all these functions and settings.

**MHL**
MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats.

*This receiver incorporates MHL 2.*

Notes

- Specifications and the design are subject to possible modifications without notice, due to improvements.
- This product includes FontAvenue® fonts licensed by NEC Corporation. FontAvenue is a registered trademark of NEC Corporation.
- iOS is a trademark on which Cisco holds the trademark right in the US and certain other countries.
- Microsoft, Windows, Windows Media and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Corporation and product names mentioned herein are trademarks or registered trademarks of the respective corporations.
**Preset code list**

You should have no problem controlling a component if you find the manufacturer in this list, but please note that there are cases where codes for the manufacturer in the list will not work for the model that you are using. There are also cases where only certain functions may be controllable after assigning the proper preset code.

**Important**

- We do not guarantee the operations of all the manufacturers and devices listed. Operation may not be possible even if a preset code is entered.

If you can't find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 74).
If operations are not possible using the preset codes below, you may be able to conduct operations with the preset codes for the BD. DVR (BD, HDR).
