WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

VENTILATION CAUTION
In case of VSx-45
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 40 cm at top, 20 cm at rear, and 20 cm at each side).
In case of VSx-45
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 40 cm at top, 20 cm at rear, and 20 cm at each side).

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, tablecloths, curtains) or by operating the equipment on thick carpet or a bed.

Operating Environment
Operating environment temperature and humidity:
+5 °C to +35 °C (+41 °F to +95 °F); less than 85 %RH (cooling vents not blocked)

Do not install this unit in a poorly ventilated area, or in locations exposed to high humidity or direct sunlight (or strong artificial light).

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

1) Read these instructions.
2) Keep these instructions.
3) Heed all warnings.
4) Follow all instructions.
5) Do not use this apparatus near water.
6) Clean only with dry cloth.
7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.

11) Only use attachments/accessories specified by the manufacturer.
12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

13) Unplug this apparatus during lightning storms or when unused for long periods of time.
14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

Caution
To prevent fire hazard, the Class 2 Wiring Cable should be used for connection with speaker, and should be routed away from hazards to avoid damage to the insulation of the cable.

Information to User
Alterations or modifications carried out without appropriate authorization may invalidate the user’s right to operate the equipment.

Caution
This product contains chemicals known to the State of California and other governmental entities to cause cancer and birth defects or other reproductive harm. Wash hands after handling.
IMPORTANT NOTICE
THE MODEL NUMBER AND SERIAL NUMBER OF THIS EQUIPMENT ARE ON THE REAR OR BOTTOM. RECORD THESE NUMBERS ON YOUR ENCLOSED WARRANTY CARD AND KEEP IN A SAFE PLACE FOR FUTURE REFERENCE.

CAUTION
This product satisfies FCC regulations when shielded cables and connectors are used to connect the unit to other equipment. To prevent electromagnetic interference with electric appliances such as radios and televisions, use shielded cables and connectors for connections.

This product is for general household purposes. Any failure due to use for other than household purposes (such as long-term use for business purposes in a restaurant or use in a car or ship) and which requires repair will be charged for even during the warranty period.

WARNING
Store small parts out of the reach of children and infants. If accidentally swallowed, contact a doctor immediately.

The Safety of Your Ears is in Your Hands
Get the most out of your equipment by playing it at a safe level—a level that lets the sound come through clearly without annoying blaring or distortion and, most importantly, without affecting your sensitive hearing. Sound can be deceiving. Over time, your hearing “comfort level” adapts to higher volumes of sound, so what sounds “normal” can actually be loud and harmful to your hearing. Guard against this by setting your equipment at a safe level BEFORE your hearing adapts.

ESTABLISH A SAFE LEVEL:
• Set your volume control at a low setting.
• Slowly increase the sound until you can hear it comfortably and clearly, without distortion.
• Once you have established a comfortable sound level, set the dial and leave it there.

BE SURE TO OBSERVE THE FOLLOWING GUIDELINES:
• Do not turn up the volume so high that you can’t hear what’s around you.
• Use caution or temporarily discontinue use in potentially hazardous situations.
• Do not use headphones while operating a motorized vehicle; the use of headphones may create a traffic hazard and is illegal in many areas.

This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment and meets RSS-102 of the IC radio frequency (RF) Exposure rules. This equipment should be installed and operated keeping the radiator at least 20 cm or more away from person’s body (excluding extremities: hands, wrists, feet and ankles).

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
Thank you for buying this Pioneer product. Please read through these operating instructions so you will know how to operate your model properly.

Flow of settings on the receiver

Flow for connecting and setting the receiver

The unit is a full-fledged AV receiver equipped with an abundance of functions and terminals. It can be used easily after following the procedure below to make the connections and settings.

Required setting item: 1, 2, 3, 4, 5, 8, 10
Setting to be made as necessary: 6, 7, 9, 11, 12, 13, 14

Important

Using Wiring Navi on AVNavigator of this receiver, you can make the initial settings of the receiver on your computer or mobile device. In that case, you can use Wiring Navi to make the same connections or settings that are performed in Steps 2, 3, 4, 5, 6, 8, and 9. For details of how to use AVNavigator, refer to How to use the built-in AVNavigator on page 53.

1 Before you start
   • Checking what’s in the box on page 10
   • Loading the batteries on page 11

2 Determining the speakers’ application (page 21 (VSX-90), page 40 (VSX-45))
   In case of VSX-90
   • [A] 7.2 channel surround system (Surround back/Top middle) connection
   • [B] Dolby Enabled Speaker system connection
   • [C] 7.2 channel surround system (Surround back/Front wide) connection
   • [D] 7.2 channel surround system & Speaker B connection
   • [E] 5.2 channel surround system & Front Bi-amping connection (High quality surround)
   • [F] 5.2 channel surround system & ZONE 2 connection (Multi Zone)
   • [G] 5.2 channel surround system & HDZONE connection (Multi Zone)
   In case of VSX-45
   • [A] 5.2 channel surround system connection
   • [B] 5.2 channel surround system & Speaker B connection
   • [C] Front Bi-amping connection (High quality surround)

3 Connecting the speakers
   • Placing the speakers (page 22 (VSX-90), page 41 (VSX-45))
   • Connecting the speakers (page 24 (VSX-90), page 41 (VSX-45))
   • Installing your speaker system (page 25 (VSX-90), page 42 (VSX-45))
   • Bi-amping your speakers (page 27 (VSX-90), page 43 (VSX-45))

4 Connecting the components
   • About the audio connection (page 27 (VSX-90), page 43 (VSX-45))
   • VSX-90 only: About the video converter on page 29
   • Connecting your TV and playback components (page 29 (VSX-90), page 44 (VSX-45))
   • Connecting AM/FM antennas (page 32 (VSX-90), page 48 (VSX-45))
   • Plugging in the receiver (page 37 (VSX-90), page 51 (VSX-45))

5 Power On

6 Changing the OSD display language (OSD Language) (page 64)

7 Using the AVNavigator functions (page 53)

8 MCACC speaker settings
   • Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61

9 The Input Setup menu (page 62)
   (When using connections other than the recommended connections)

10 Basic playback (page 65)

11 Switching the HDMI output (page 92)

12 Adjusting the sound and picture quality as desired
   • Using the various listening modes (page 73)
   • Better sound using Phase Control (page 76)
   • Measuring the all EQ type (SYMMETRY/ALL CH ADJ/FRONT ALIGN) (page 103)
   • Changing the channel level while listening (page 112)
   • Switching on/off the Acoustic Calibration EQ, Auto Sound Retriever or Dialog Enhancement (page 89)
   • Setting the Audio options (page 89)
   • Setting the Video options (page 91)

13 Other optional adjustments and settings
   • Control with HDMI function (page 83)
   • The Advanced MCACC menu (page 102)
   • The System Setup and Other Setup menus (page 109)

14 Making maximum use of the remote control
   • Operating multiple receivers (page 97)
   • Setting the remote to control other components (page 97)

Features

Audio

- **Dolby Atmos**
  - VSX-90 only
  This AV receiver supports the latest Dolby Atmos surround sound system. Dolby Atmos is a new technology in which, through real-time calculation of audio data and meta data (position and time information) included in the audio signal, a surround sound space is achieved irrespective of the speaker layout and number of speakers. Dolby Atmos contents are required to enjoy Dolby Atmos. For Blu-ray discs with Dolby Atmos, Dolby Atmos can be played by connecting most conventional Blu-ray discs with this receiver using HDMI.
- **ESS-24bit-DAC-equipped**
  - VSX-90 only
  All channels are equipped with ESS SABRE Premier Audio DACs. The Jitter Eliminators achieve clearer sound.
- **Hi-bit 24 Audio Processing**
  - VSX-90 only
  Creates a wider dynamic range with digital sources like CDs or DVDs. 16- and 20-bit PCM as well as compressed audio is requantized to 24 bits, and the high frequency component is interpolated upon data processing to enable smoother, more subtle musical expression.
- **Easy setup using MCACC PRO (VSX-90)/Advanced MCACC (VSX-45)**
  The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.
- **Auto Phase Control Plus**
  For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function automatically corrects phase shifting on such discs and broadcasts. This function is particularly effective when playing multi-channel music containing low frequency effects (LFE).
- **Full Band Phase Control**
  - VSX-90 only
  The further advanced Full Band Phase Control technology focuses on the group delay in the speaker network filter, and compensates with special digital signal processing (DSP), to adjust the phase of each unit as well as the group delay for each speaker. Full Band Phase Control gives multi-range speakers the sound coherence of full-range speakers, while retaining the wide frequency range advantage.
- **Subwoofer EQ**
  The EQ for subwoofer output can be corrected. In addition to the results of MCACC automatic adjustment, the subwoofer output can be adjusted to match the viewing environment or your taste by manual correction.
- **Virtual Speakers**
  By turning on the ‘Virtual Surround Back’, ‘Virtual Height’, and ‘Virtual Wide’ modes, it is possible to realize a maximum of 11.1 channels combining the speakers that are actually installed and the virtual speakers. This makes for a smoother connection between the sounds and an improved 3D feel.

Video

- **Ultra HD (with 4K/60p video support) - Pass-through and upscaling** -
  Up to 4K/60p resolution images can be passed through and displayed as such, and the HD (High Definition) or Full HD images of DVDs, Blu-ray discs and HD broadcasts can be upsampled to a resolution of up to 4K/60p and displayed. A separate monitor supporting Ultra HD (4K video) is required.
- **HDMI (4K60p, 3D, Audio Return Channel)**
  A compatible component is required to use the above function.
- **HDCP 2.2**
  This receiver is compatible with the HDCP 2.2 standard, which has stringent copyright protection technology.
Network

- **Built-in Wi-Fi**
  This receiver is compatible with Wi-Fi standards, and supports the 2.4 GHz and 5 GHz dual bands.

- **Wireless Direct**
  With this receiver, you can enjoy music playback without a router by direct wireless connection using an iPhone or other Wi-Fi mobile device.

- **Spotify Digital Music-Streaming Service ready**
  Spotify is a digital music-streaming service that gives you on-demand access to millions of songs. This receiver is ready for Connect from Spotify, which lets you select songs on your Spotify app to listen to on your audio system. For service availability in your country check www.spotify.com.

- **Compatible with Windows 8.1**
  This receiver is compatible with Windows 8.1, letting you easily stream music from compatible PCs on your home network.

- **Apple AirPlay**
  With AirPlay you can stream music from iTunes to this receiver and play it through your home theater system. You can even use the receiver to view metadata including song titles, artist’s names as well as the album art on a connected display. You can easily enjoy your iTunes music in any room in the house.

- **DLNA Certified (1.5)**
  This receiver is a DLNA certified (1.5) device, enabled to work not only as a DMP (Digital Media Player) for playing DMS (Digital Media Server) audio files, but also as a DMR (Digital Media Renderer) to be controlled remotely by a device such as a smartphone or PC.

- **Internet Radio**
  When you connect this receiver to the network, you can listen to internet radio from around the world. You can register your favorite broadcasting stations in this receiver.

- **Multi-channel Music File playback**
  This receiver enables multi-channel music file playback with a resolution of up to 96 kHz/24 bit. Playback of WAV and FLAC files via the front USB port and network is supported.

- **DSD File Music playback (via Network, Front USB and HDMI)**
  Playback of high sound quality DSD music (DSD files and DSD discs (SACDs)) is supported.

- **High Resolution Music Playback**
  High resolution music files with resolutions of 96 kHz/24 bit to 192 kHz/24 bit can be played; Playback of AIFF, Apple Lossless, WAV and FLAC files via the front USB port and network is supported.

- **Gapless Playback**
  The silent section between tracks is skipped when playing music files, eliminating the interruptions that usually occur when playing live or concert contents. This receiver plays back AAC or MP3 format files with a minimum gap even though it is fundamentally impossible to play back without a gap.

Connectivity

- **Built-in Bluetooth Wireless Technology**
  This receiver, equipped with Bluetooth wireless technology, lets you enjoy music files on an iPhone or other Bluetooth wireless technology enabled device wirelessly.

- **MHL™ (Mobile High-definition Link)-compatible device playback**
  An incorporates MHL 2 mobile device can be connected to enjoy 3D videos, full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver.

- **HTC Connect**
  HTC Connect makes it easy to wirelessly stream your favorite music straight from your HTC phone. There’s no need for a separate app; HTC Connect is built right in your phone's music player.

- **iPod Playback**
  Your iPod and iPhone can be connected to the receiver’s USB terminal to play the music files on the iPod or iPhone. Also, the iPod or iPhone is charged when it is connected to the receiver.
Before you start

Installation

- **Built-in AVNavigator**
  With the built-in AVNavigator embedded in this receiver, Wiring Navi can be used to interactively connect and set initial settings of this receiver with a smartphone, tablet, PC, and Mac through a home network. In addition, with VSX-90, Interactive Operation Guide can also be used, which visually explains the functions and operation by actually experiencing the operation with contents linked with the main device.

- **IControlAV5 Remote Application**
  This is an application that allows intuitive operation of many of the receiver’s functions. This application is available on the App Store for iPhone, iPod touch and iPad. You can also get it on Google Play for Android smartphones. The application can be downloaded free of charge.

- **HDZONE output**
  VSX-90 only
  This receiver supports output of the HDMI output to a subzone room. Powerful images can be enjoyed simply by connecting this receiver to a TV supporting 4K/Full-HD/3D. In addition, a multi-channel environment can be created by connecting this receiver to another AV receiver in the subzone room.

- **ZONE Ready**
  VSX-90 only
  This receiver is equipped with HDZONE and ZONE 2. HDZONE supports HD audio/video streaming to a separate room via HDMI. Multi-Zone enables music and movie playback from different sources in three zones at the same time.

- **Energy Saving Design**
  This AV receiver has an ecological design. In addition to even lower power consumption in standby, the receiver is equipped with an 'eco mode' for low power consumption when playing contents as well. Furthermore, the eco mode can easily be set with a dedicated button on the remote control of using iControlAV5.

Checking what’s in the box

Please check that you’ve received the following supplied accessories:
- Setup microphone (cable: 5 m (16.4 ft.))
- Remote control unit
- AAA size IEC R03 dry cell batteries (to confirm system operation) x2
- AM loop antenna
- FM wire antenna
- Power cord (VSX-90 only)
- CD-ROM
- Quick start guide
- Safety Brochure
- Warranty sheet

Note

The operating instructions explains the operation using mainly illustrations of VSX-90. In addition, the illustrations are modified and simplified for explanation purposes and may be different from the actual product.

Handling the CD-ROM

Precautions For Use
- This CD-ROM is for use with a personal computer. It cannot be used with a DVD player or music CD player. Attempting to play this CD-ROM with a DVD player or music CD player can damage speakers or cause impaired hearing due to the large volume.

License
- Please agree to the “Terms of Use” indicated below before using this CD-ROM. Do not use if you are unwilling to consent to the terms of its use.

Terms of Use
- Copyright to data provided on this CD-ROM belongs to PIONEER HOME ELECTRONICS CORPORATION. Unauthorized transfer, duplication, broadcast, public transmission, translation, sales, lending or other such matters that go beyond the scope of “personal use” or “citation” as defined by Copyright Law may be subject to punitive actions. Permission to use this CD-ROM is granted under license by PIONEER HOME ELECTRONICS CORPORATION.

General Disclaimer
- PIONEER HOME ELECTRONICS CORPORATION does not guarantee the operation of this CD-ROM with respect to personal computers using any of the applicable OS. In addition, PIONEER HOME ELECTRONICS CORPORATION is not liable for any damages incurred as a result of use of this CD-ROM and is not responsible for any compensation. The names of private corporations, products and other entities described herein are the registered trademarks or trademarks of their respective firms.
Installing the receiver

- When installing this unit, make sure to put it on a level and stable surface.
- Don’t install it on the following places:
  —on a color TV (the screen may distort)
  —near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
  —in direct sunlight
  —in damp or wet areas
  —in extremely hot or cold areas
  —in places where there is vibration or other movement
  —in places that are very dusty
  —in places that have hot fumes or oils (such as a kitchen)
- Do not touch this receiver’s bottom panel while the power is on or just after it is turned off. The bottom panel becomes hot when the power is on (or right after it is turned off) and could cause burns.

Loading the batteries

The batteries included with the unit are to check initial operations; they may not last over a long period. We recommend using alkaline batteries that have a longer life.

- The remote control setting may be restored to the default after the batteries are replaced. If this happens, reset it (page 96 (VSX-90), page 14 (VSX-45)).

WARNING

- Do not use or store batteries in direct sunlight or other excessively hot place, such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

CAUTION

Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:

- Never use new and old batteries together.
- Insert the plus and minus sides of the batteries properly according to the marks in the battery case.
- When inserting the batteries, make sure not to damage the springs on the battery’s (–) terminals. This can cause batteries to leak or overheat.
- Batteries with the same shape may have different voltages. Do not use different batteries together.
- When disposing of used batteries, please comply with governmental regulations or environmental public institution’s rules that apply in your country/area.

Operating range of remote control unit

The remote control may not work properly if:

- There are obstacles between the remote control and the receiver’s remote sensor.
- Direct sunlight or fluorescent light is shining onto the remote sensor.
- The receiver is located near a device that is emitting infrared rays.
- The receiver is operated simultaneously with another infrared remote control unit.
Controls and displays

Remote control (In case of VSX-90)..............................................................................................13
Remote control (In case of VSX-45)..............................................................................................14
Display............................................................................................................................................16
Front panel.....................................................................................................................................17
The remote has been conveniently color-coded according to component control using the following system:
- **White** – Receiver control, TV control
- **Blue** – Operation of other devices and each input (TUNER, etc.) (See pages 67, 68, 70, 71 and 100.)

1. **STANDBY/ON**
   This switches between standby and on for this receiver.

2. **ALL ZONE STBY**
   Use this button to perform unique operations (page 99).

3. **MAIN RECEIVER**
   Switches the remote to control the receiver (used to select the white commands). Switch to perform operations in the main zone.

4. **SOURCE CONTROL buttons**
   Switches the input. Also, switches remote control operation mode for operating other devices or each input (TUNER, etc.) (page 97).
   The input for HDMI, NET and ALL switches each time these buttons are pressed.

5. **TV control buttons**
   These buttons can be used to perform operations on the TV to which the TV INPUT button is assigned. The TV can be operated with these buttons regardless of the input set for the remote control’s operation mode (page 97).

6. **Receiver Control buttons**
   - **STATUS** – Displays the IP address and information such as selected/set functions and input signals on the display (page 94).
   - **OUT P.** (OUTPUT PARAMETER) – Switches the output terminal of the HDMI signal or speaker terminal to be played (page 91).
   - **RETURN** – Press to confirm and exit the current menu screen.
   - **CH LV.** (CHANNEL LEVEL) – Press repeatedly to select a channel, then use < or > to adjust the level (pages 92 and 112).

7. **Receiver setting buttons**
   Press MAIN RECEIVER first to access:
   - **AUDIO P.** (AUDIO PARAMETER) – Use to access the Audio options (page 89).
   - **VIDEO P.** (VIDEO PARAMETER) – Use to access the Video options (page 91).
   - **HOME MENU** – Use to access the Home Menu (pages 62, 64, 86, 103 and 110).

8. **/ / / / ENTER**
   Use the arrow buttons when setting up your surround sound system (see page 103) and the Audio or Video options (page 89 or 91).

9. **LISTENING MODE buttons**
   - **AUTO** (AUTO SURROUND/ALC/STREAM DIRECT) – Switches between Auto Surround (page 74), Auto Level Control mode and Stream Direct mode (page 75).
   - **SURR** (STANDARD SURROUND) – Press for Standard decoding and to switch various modes (Dolby, DTS, etc.) (page 74).
   - **ADV** (ADVANCED SURROUND) – Use to switch between the various surround modes (page 75).

10. **Source device operation button**
    Operates other devices or each input (TUNER, etc.).

11. **DIMMER**
    Dims or brightens the display (page 94).

12. **SLEEP**
    Use to put the receiver in sleep mode and select the amount of time before sleep (page 94).
13 **SOURCE**
Press to turn on/off the power to the Pioneer device connected to the receiver.

14 **Remote control LED**
Lights when a command is sent from the remote control.

15 **SUB ZONE CONTROL buttons**
- **Z2** (ZONE 2) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to Zone 2 operation.
- **Z3** (ZONE 3) – It is not used with this receiver.
- **HDZ** (HDZONE) – Holding down this button (for 1.5 seconds) until the remote control LED flashes one time, the mode changes to HDZONE operation.

16 **VOLUME +/-**
Use to set the listening volume.
To adjust the main zone sound volume, press **MAIN RECEIVER** first and then press this button. When in the sub zone, press the **SUB ZONE CONTROL** button first and then press this button.

17 **MUTE**
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
To mute the main zone sound volume, press **MAIN RECEIVER** first and then press this button. When in the sub zone, press the **SUB ZONE CONTROL** button first and then press this button.

18 **RCU SETUP**
Used to set the remote control (page 97).

---

**Remote control (In case of VSX-45)**
This section explains how to operate the remote control for the receiver.
The remote has been conveniently color-coded according to component control using the following system:

- **White** – Receiver control, TV control
- **Blue** – Operation of other devices and each input (TUNER, etc.) (See pages 67, 68, 69, 70, 71, and 100)

### Controls and displays

#### 1. STANDBY/ON

This switches between standby and on for this receiver.

#### 2. SLEEP

Use to put the receiver in sleep mode and select the amount of time before sleep (page 94).

#### 3. MAIN RECEIVER

Switches the remote to control the receiver (used to select the white commands).

#### 4. Input function buttons

Switches the input. Also, switches remote control operation mode for operating other devices or each input (TUNER, etc.) (pages 67, 68, 70, 71, 100).

The input for HDMI, NET, and ALL switches each time these buttons are pressed.

#### 5. Receiver Control buttons

- **STATUS** – Displays the IP address and information such as selected/set functions and input signals on the display (page 94).
- **SP-A/B** – Switches the speaker output on/off. No sounds will be made from the speaker when SP OFF is selected.
- **CH LV.** (CHANNEL LEVEL) – Press repeatedly to select a channel, then use ↑↓ to adjust the level (pages 92 and 112).
- **RETURN** – Press to confirm and exit the current menu screen.

#### 6. Receiver setting buttons

Press MAIN RECEIVER first to access:

- **AUDIO P.** (AUDIO PARAMETER) – Use to access the Audio options (page 89).
- **VIDEO P.** (VIDEO PARAMETER) – Use to access the Video options (page 91).
- **HOME MENU** – Use to access the Home Menu (pages 62, 64, 86, 103, and 110).

#### 7. UP/↓/←/→/ENTER

Use the arrow buttons when setting up your surround sound system (see page 100) and the Audio or Video options (page 89 or 91).

#### 8. Component control buttons

The main buttons (↑↓, ←→, etc.) are used to control a component after you have selected it using the input function buttons.

The BD, DVD, and CD operation using the component control buttons are limited only to Pioneer components. The controls above these buttons can be accessed after you have selected the corresponding input function button (BD, DVD, and CD). These buttons also function as described below.

Press TUNER first to access:

Use TUNE +/− can be used to find radio frequencies and PRESET +/− can be used to select preset radio stations (page 70).

#### 9. SHIFT

It is not used with this receiver.

#### 10. SOURCE

Press to turn on/off the power to the Pioneer device connected to the receiver.

#### 11. DIMMER

Dims or brightens the display (page 94).

#### 12. TV control buttons

Operates a TV. When operating other manufacturer’s TV, setup as follows.

- **0** – Use to turn on/off the power of the TV.
- **INPUT** – Use to select the TV input signal.
- **CH +/−** – Use to select channels.
- **VOL +/−** – Use to adjust the volume on your TV.

While holding down TV 0 button, press the input function buttons (listed in the table below) for component you want to control for about five seconds.

This may not operate depending on the TV.

**Default setting:** Pioneer

**TV preset**

#### 13. MUTE

Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).

To mute the sound volume, press MAIN RECEIVER first and then press this button.

#### 14. VOLUME +/−

Use to set the listening volume.

#### 15. LISTENING MODE buttons

- **AUTO** (AUTO SURROUND/ALC/STREAM DIRECT) – Switches between Auto Surround (page 74), Auto Level Control mode and Stream Direct mode (page 75).
- **SURR** (STANDARD SURROUND) – Press for Standard decoding and to switch various modes (Dolby, DTS, etc.) (page 74).
- **ADV** (ADVANCED SURROUND) – Use to switch between the various surround modes (page 75).
1 Signal indicators
Light to indicate the currently selected input signal. AUTO lights when the receiver is set to select the input signal automatically (page 76).

2 Program format indicators
Light to indicate the channels to which digital signals are being input.
- L/R – Left front/Right front channel
- C – Center channel
- SL/ SR – Left surround/Right surround channel
- LFE – Low frequency effects channel (the indicators light when an LFE signal is being input)
- XL/ XR – Two channels other than the ones above
- XC – Either one channel other than the ones above, the mono surround channel or matrix encode flag

3 Digital format indicators
Light when a signal encoded in the corresponding format is detected.
- DIGITAL – Lights with Dolby Digital decoding.
- TrueHD – Lights with Dolby TrueHD decoding.
- DTS – Lights with DTS decoding.
- 96/24 – Lights with DTS 96/24 decoding.
- DSD – Lights during playback of DSD (Direct Stream Digital) signals.
- DSD PCM – Light during DSD (Direct Stream Digital) to PCM conversion.
- PCM – Lights during playback of PCM signals.
- MSTR – Lights during playback of DTS-HD Master Audio signals.

4 MULTI-ZONE
Lights when the MULTI-ZONE feature is active (page 92).

5 FULL BAND
Lights when the Full Band Phase Control is switched on (page 77).

6 Listening mode indicators
- ALC – Lights when the ALC (Auto level control) mode is selected (page 74).
- AUTO SURROUND – Lights when the Auto Surround feature is switched on (page 74).
- STREAM DIRECT – Lights when Direct/Pure Direct is selected (page 75).
- ADV.SURROUND – Lights when one of the Advanced Surround modes has been selected (page 75).
- STANDARD – Lights when one of the Standard Surround modes is switched on (page 74).

7  (PHASE CONTROL)
Lights when the Phase Control is switched on (page 76).

8 ATT
Lights when the input signal level is lowered to reduce distortion (page 89).

9 SOUND
Lights when the DIALOG E (Dialog Enhancement) or TONE (tone controls) features is selected (page 80).

10 Tuner indicators
- TUNED – Lights when a broadcast is being received.
- STEREO – Lights when a stereo FM broadcast is being received in auto stereo mode.
- MONO – Lights when the mono mode is set using MPX.

11 Lights when the sound is muted.

12 Master volume level
Shows the overall volume level. ‘—’ indicates the minimum level, and ‘+12dB’ indicates the maximum level.

13 Input function indicators
Light to indicate the input function you have selected.

14 Scroll indicators
Light when there are more selectable items when making the various settings.

15 Speaker indicators
In case of VSX-90: Lights to indicate the current speaker system using OUT P. (page 91).
In case of VSX-45: When the front panel’s SPEAKERS or remote control’s SP-A/B are pressed, the currently selected speaker terminal indicator lights.

16 SLEEP
Lights when the receiver is in sleep mode (page 94).

17 Matrix decoding format indicators
- PRO LOGIC II (VSX-45 only) – This lights to indicate Pro Logic II decoding (page 74).
- Neo:6 – When one of the Neo:6 modes of the receiver is on, this lights to indicate Neo:6 processing (page 74).

18 S.RTRV
Lights when the Auto Sound Retriever function is active (page 89).

19 Character display
Displays various system information.

20 Remote control mode indicator
VSX-90 only: Lights to indicate the receiver’s remote control mode setting. (Not displayed when set to 1.) (page 114)
# Controls and displays

## Front panel

### VSX-90

1. **STANDBY/ON**
   - This switches between standby and on for this receiver.

2. **INPUT SELECTOR dial**
   - Use to select an input function.

3. **Indicators**
   - **MCACC PRO** (VSX-90)/**ADVANCED MCACC** (VSX-45) – Lights when **EQ** is set to **ON** in the AUDIO PARAMETER menu (page 89).
   - **FL OFF** – Lights when “off” (nothing displayed) is selected with the display’s dimmer adjustment (page 94).
   - **HDMI** – Blinks when connecting an HDMI-equipped component; lights when the component is connected (page 29).
   - **WIRELESS** – Lights when connected to the network with wireless. The light slowly blinks during WAC (Wireless Accessory Configuration) mode (page 57).

4. **MULTI-ZONE controls**
   - **VSX-90 only**
     - If you’ve made MULTI-ZONE connections (page 33) use these controls to control the sub zone from the main zone (page 93).

5. **Character display**
   - See Display on page 16.

6. **TUNER controls**
   - **BAND** – Switches between AM and FM radio bands (page 70).
   - **TUNER EDIT** – Use with **TUNE** and **PRESET** and **ENTER** to memorize and name stations for recall (page 70).
   - **TUNE** – Find radio frequencies (page 70).
   - **PRESET** – Find preset stations (page 70).

7. **Remote sensor**
   - Receives the signals from the remote control (page 11).

8. **MASTER VOLUME dial**

9. **PHONES jack**
   - Use to connect headphones. When the headphones are connected, there is no sound output from the speakers.

10. **MCACC SETUP MIC jack**
    - Use to connect the supplied microphone (page 61).

11. **SPEAKERS**
    - Use to change the speaker terminal (page 91).

12. **Listening mode buttons**
    - **AUTO SURR/ALC/STREAM DIRECT** – Switches between Auto Surround (page 74), Auto Level Control and Stream Direct mode (page 74).
    - **STANDARD SURROUND** – Press for Standard decoding and to switch various modes (Neo:6, Stereo, etc.) (page 74).
    - **ADVANCED SURROUND** – Use to switch between the various surround modes (page 75).

13. **STATUS**
    - Displays the IP address and information such as selected/set functions and the input signal on the display (page 94).

14. **iPod iPhone DIRECT CONTROL**
    - Change the receiver’s input to the iPod and enable iPod operations on the iPod (page 67).
15 iPod/iPhone terminals
Use to connect your Apple iPod/iPhone as an audio source (page 36), or connect a USB device for audio and photo playback (page 36).

16 HDMI 5 INPUT terminal
VSX-90 only
Use for connection to a compatible HDMI device (Video camera, etc.) (page 36).

17 DIMMER
VSX-45 only.
Dims or brightens the display (page 94).

18 ECO
VSX-45 only.
Use to switch the eco mode type (page 75).

Connecting your equipment

This receiver provides you with many connection possibilities, but it doesn’t have to be difficult. This chapter explains the kinds of components you can connect to make up your home theater system.

⚠️ CAUTION
- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
- When making connections, also keep the power cords of the devices being connected unplugged from the power outlets.
- Depending on the device being connected (CD, DVD or BD player, etc.), the methods of connection and terminal names may differ from the explanations in this manual. Also refer to the operating instructions of the respective devices.

Rear panel

Notes
- The RS-232C terminal is exclusively for the installer.
- The input functions below are assigned by default to the receiver’s different input terminals. Refer to The Input Setup menu on page 62 to change the assignments if other connections are used.

Determining the speakers’ application

This unit permits you to build various surround systems, in accordance with the number of speakers you have.
- Be sure to connect speakers to the front left and right channels (L and R).
- It is also possible to only connect one of the surround back speakers (SB) or neither.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.
- When neither the top middle, surround back, or front wide speaker is connected, Dolby Atmos does not play. Choose one from Plans [A] to [G] below.

Important
- The Speaker System setting must be made if you use any of the connections shown below other than [A] (see Speaker system setting on page 110).
- The speakers from which sound is output can be switched according to the speaker layout/usage pattern (sound is not necessarily output from all connected speakers). Use the OUT P. button to switch the speakers from which sound is output. For details, see Switching the speaker terminals on page 91.

[A] 7.2 channel surround system (Surround back/Top middle) connection

*Default setting
- Speaker System setting: 7.2ch/5.2.2ch

A 7.2 channel surround connects the left and right front speakers (L/R), the center speaker (C), the left and right top middle speakers (TMdL/TMdR), the left and right surround speakers (SL/SR), the left and right surround back speakers (SBL/SBR), and the subwoofers (SW 1/SW 2). It is not possible to produce sound simultaneously from the surround back speakers and the top middle speakers. The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 91. Playback of Dolby Atmos requires a connection with surround back speakers or top middle speakers.

[B] Dolby Enabled Speaker system connection

*Default setting
- Speaker System setting: 7.2ch/5.2.2ch
- Speaker Setting: Dolby Sp (Front)
- Speaker Setting: Dolby Sp (Surr)

7.2 channel surround system that consists of connected front left/right speakers (L/R), center speaker (C), left/right surround speakers (SL/SR), left/right surround back speakers (SBL/SBR), subwoofer (SW 1/SW 2), Dolby Enabled Speaker (TMdL/TMdR). For information on Dolby Enabled Speaker, refer to page 25. Audio will not be output at the same time from the surround back speaker and a Dolby Enabled Speaker. This surround system produces a more true-to-life sound from above. The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 91. Playback of Dolby Atmos requires a connection with surround back speakers or top middle speakers that use Dolby Enabled Speakers.
[C] 7.2 channel surround system (Surround back/Front wide) connection
- Speaker System setting: 7.2ch SB/FW

A 7.2 ch surround system connects the left and right front speakers (L/R), the center speaker (C), the left and right front wide speakers (FWL/FWR), the left and right surround speakers (SL/SR), the left and right surround back speakers (SBL/SBR), and the subwoofers (SW1/SW2).

It is not possible to produce sound simultaneously from the surround back speakers and the front wide speakers. The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 91.

Playback of Dolby Atmos requires a connection with a surround back speaker or front wide speaker.

[D] 7.2 channel surround system & Speaker B connection
- Speaker System setting: Speaker B

With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback of the same sound on the B speakers. The same connections also allow for 7.2-channel surround sound in the main zone when not using the B speakers.

The speakers from which sound is output can be switched using the OUT P. button. For details, see Switching the speaker terminals on page 91.

Playback of Dolby Atmos requires a connection with surround back speakers. However, when SP: ▶ A+B ON or Speaker B is selected, Dolby Atmos playback is not possible.

[E] 5.2 channel surround system & Front Bi-amping connection (High quality surround)
- Speaker System setting: Front Bi-Amp

Bi-amping connection of the front speakers for high sound quality with 5.2-channel surround sound. You cannot playback Dolby Atmos with this system.

[F] 5.2 channel surround system & ZONE 2 connection (Multi Zone)
- Speaker System setting: ZONE 2

With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback on another component in ZONE 2. (The selection of input devices is limited.) You cannot playback Dolby Atmos with this system.
[G] 5.2 channel surround system & HDZONE connection (Multi Zone)

- Speaker System setting: HDZONE

With these connections you can simultaneously enjoy 5.2-channel surround sound in the main zone with stereo playback on another component in HDZONE. (The selection of input devices is limited.)

You cannot playback Dolby Atmos with this system.

Other speaker connections

- Your favorite speaker connections can be selected even if you have fewer than 5.2 speakers (except front left/right speakers).
- When not connecting a subwoofer, connect speakers with low frequency reproduction capabilities to the front channel. (The subwoofer’s low frequency component is played from the front speakers, so the speakers could be damaged.)
- After connecting, be sure to conduct the Full Auto MCACC (speaker environment setting) procedure. See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61.

Placing the speakers

Refer to the chart below for placement of the speakers you intend to connect.

Listener speaker placement guidelines

Listener speakers, such as Left, Right, Center, Left Surround, and Right Surround, are placed at ear level relative to the listener position.

Top speaker placement guidelines

Top middle speakers (TMDL, TMDR) are placed above the listener position on the ceiling.

Layout as seen from above

- All top speaker pairs should preferably be mounted along a vertical line that is a ±30º horizontal from the center-front reference. However, these speakers may be placed as far as the side walls and anywhere between the side walls and the middle of the room, if needed.
- We also recommend that the top forward speakers and top backward speakers be installed at a symmetrical distance from the front and rear of right above, respectively.
Connecting your equipment (In case of VSX-90)

Layout as seen from the side

- The height of the Top Middle speakers mounted on the ceiling should preferably be no more than three times the height and no less than two times the height of the front speakers at listener height.
- The Top Middle speakers should be directed straight down, rather than directed at a central listener position.
- We recommend that the top middle speakers be installed slightly forward from right above.

Some tips for improving sound quality

Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.

- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.
- For the best stereo effect, place the front speakers 2 m to 3 m (6 ft. to 9 ft.) apart, at equal distance from the TV.
- If you’re going to place speakers around your CRT TV, use shielded speakers or place the speakers at a sufficient distance from your CRT TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround and surround back speakers should be positioned 60 cm to 90 cm (2 ft. to 3 ft.) higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.
- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.

Connecting the speakers

Each speaker connection on the receiver comprises a positive (+) and negative (–) terminal. Make sure to match these up with the terminals on the speakers themselves. This unit supports speakers with a nominal impedance of 6Ω to 16Ω.

**CAUTION**

- These speaker terminals carry HAZARDOUS LIVE voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.

Bare wire connections

Make sure that all speakers are securely installed. This not only improves sound quality, but also reduces the risk of damage or injury resulting from speakers being knocked over or falling in the event of external shocks such as earthquakes.

1. Twist exposed wire strands together.
2. Loosen terminal and insert exposed wire.
3. Tighten terminal.

**Notes**

- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Banana plug connections

If you want to use speaker cables terminated with banana plugs, screw the speaker terminal fully shut, then plug the banana plug into the end of the speaker terminal.
Installing your speaker system

At the very least, front left and right speakers only are necessary. Note that your main surround speakers should always be connected as a pair, but you can connect just one surround back speaker if you like (it must be connected to the left surround back terminal).

Standard surround connection

- When only connecting one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.

The top middle terminals can also be used for the front wide and Speaker B speakers.

Front right Subwoofer 1 Center Subwoofer 2 Front left

Surround back speaker terminals can be used to connect to the sub zone.

- When connecting only one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.

Dolby Enabled Speaker

Dolby enabled speakers bring a new sense of height and immersion to the listening experience without installation of overhead speakers.

The front or surround speaker and Dolby Enabled Speaker are explained as one product group for the following connections. Connect the Standard surround connection on page 26 of the TOP MIDDLE terminal when using a Dolby Enabled Speaker as an independent product.
• **Speaker System setting: 7.2ch/5.2.2ch**  
  **Speaker Setting:** Dolby Sp (Front)

When only connecting one surround back speaker, connect it to the **SURROUND BACK L (Single)** terminals.

---

• **Speaker System setting: 7.2ch/5.2.2ch**  
  **Speaker Setting:** Dolby Sp (Surr)

When only connecting one surround back speaker, connect it to the **SURROUND BACK L (Single)** terminals.
Bi-amping your speakers

Bi-amping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you're using.

- **CAUTION**
  - Most speakers with both High and Low terminals have two metal plates that connect the High to the Low terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.
  - If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.
  - When neither the top middle, surround back, or front wide speaker is connected, Dolby Atmos does not play.

Bi-wiring your speakers

Your speakers can also be bi-wired if they support bi-amping.
- With these connections, the Speaker System setting makes no difference.
- **CAUTION**
  - Don’t connect different speakers from the same terminal in this way.
  - When bi-wiring as well, heed the cautions for bi-amping shown above.
- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver. Using a banana plug for the second connection is recommended.

About the audio connection

- With an HDMI cable, video and audio signals can be transferred in high quality over a single cable.
- For HD audio, see About HDMI on page 28.
**About the video converter**

The video converter ensures that all video sources are output through the HDMI OUT 1 and HDMI OUT 2 terminals.

If the TV is only connected to the receiver's composite video component (see The Input Setup menu on page 62), the converter gives priority to HDMI, component, then composite (in that order).

If several video components are assigned to the same input function, the converter must be connected through composite connections.

If the TV is only connected to the receiver's composite terminals.

---

**Notes**

- Among the HDMI input signals for this receiver, 1080p can be up-converted to 4K. However, this is limited to when connected with 4K compatible televisions. Please set SCAL settings to AUTO (page 91).
- The video converter may not operate and the video may not be output depending on the input signal. In such case, put the SCAL settings to PURE and connect both the input equipment and the TV with the same type of cable (page 91).
- In principle, input signals from COMPONENT VIDEO IN and VIDEO IN are output from the HDMI terminal without resolution conversion. Depending on the resolution of the connected television, there may be cases where video does not output to the screen.

---

**Connecting your equipment (In case of VSX-90)**

### About HDMI

The HDMI connection transfers uncompressed digital video, as well as almost every kind of digital audio. This receiver incorporates High-Definition Multimedia Interface (HDMI™ technology).

This receiver supports the functions described below through HDMI connections.

- Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
- HDCP 2.2 compatible terminal (BD, DVD (HDMI IN 1), SAT/CBL (HDMI IN 2), HDMI OUT 1, HDMI OUT 2
- 3D signal transfer
- Deep Color signal transfer
- x.v.Color signal transfer
- ARC (Audio Return Channel)
- 4K signal transfer
  - This may not operate properly, depending on the connected equipment.
  - 4K 24p, 4K 25p, 4K 30p, 4K 50p, 4K 60p signals are supported.
- Input of multi-channel linear PCM digital audio signals (192 kHz or less) for up to 8 channels
- Input of the following digital audio formats:
  - Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio, DTS-HD High Resolution Audio), CD, SACD (DSD signal), OBJECT based audio (Atmos)
- Synchronized operation with components using the Control with HDMI function (see Control with HDMI function on page 85)

**Notes**

- An HDMI connection can only be made with DVI-equipped components compatible with both DVI and High Bandwidth Digital Content Protection (HDCP). If you choose to connect to a DVI connector, you will need a separate adaptor (DVI to HDMI) to do so. A DVI connection, however, does not support audio signals. Consult your local audio dealer for more information.
- If you connect a component that is not compatible with HDCP, an HDCP ERROR message is displayed on the front panel display. Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video this is not a malfunction.
- Depending on the component you have connected, using a DVI connection may result in unreliable signal transfers.
- This receiver supports SACD, Dolby Digital Plus, Dolby TrueHD and DTS-HD Master Audio. To take advantage of these formats, however, make sure that the component connected to this receiver also supports the corresponding format.
- Use a High Speed HDMI™ Cable. If an HDMI cable other than a High Speed HDMI™ Cable is used, it may not work properly.
- When an HDMI cable with a built-in equalizer is connected, it may not operate properly.
- Signal transfer is only possible when connected to a compatible component.
- HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
- Turning on/off the device connected to this unit's HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

---

*“x.v.Color” and x.v.Color are trademarks of Sony Corporation.*
Connecting your TV and playback components

**Connecting using HDMI**

If you have an HDMI or DVI (with HDCP) equipped component (Blu-ray Disc player (BD), etc.), you can connect it to this receiver using a commercially available HDMI cable.

If the TV and playback components support the Control with HDMI feature, the convenient Control with HDMI functions can be used (see Control with HDMI function on page 85).

- **When connecting to an HDMI/DVI-compatible monitor using the HDMI OUT 2 terminal, switch the HDMI output setting to OUT 2 or OUT 1+2.** See Switching the HDMI output on page 92. Also, MAIN/HDZONE must be set to MAIN beforehand (page 113).
- **For input components, connections other than HDMI connections are also possible (see Connecting your DVD player with no HDMI output on page 30).**
- **If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables.**
  - When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 86).
  - After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
  - If you use a coaxial digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital or analog audio input you connected the TV to (see The Input Setup menu on page 62).
  - Please refer to the TV’s operation manual for directions on connections and setup for the TV.
  - **If the TV to be connected using HDMI supports 4K/60p, you can switch the 4K/60p signal output setting in accordance with TV performance.** When the 4K/60p setting is changed to 4:4:4, the video image may not be output normally unless the HDMI cable supports 4K/60p 4:4:4 24 bit (18 Gbps transmission). In such a case, select 4:2:0 (page 92).
  - You cannot input 4K/60p 4:4:4 24 bit video from HDMI IN 3 to the IN 6 terminal. Use the BD IN, HDMI IN 1 or HDMI IN 2 terminal.
  - The HDMI OUT 2 terminal outputs 4K/60p 4:4:4 24 bit video when MAIN/HDZONE is set to MAIN. When it is set to HDZONE, the 4K/60p 4:4:4 24 bit video is not output.
Connecting your DVD player with no HDMI output

This diagram shows connections of a TV (with HDMI input) and DVD player (or other playback component with no HDMI output) to the receiver.

![Diagram of connections]

- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 9).
- When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 86).
- When connecting to a DVD player with an optical digital audio cable or a coaxial digital audio cable, performing input terminal settings is necessary (page 69).
- If HDZONE is set to on, video images connected using a video cable or component cable are not output from the HDMI terminal. To output video images, turn HDZONE off (page 93).

Connecting your TV with no HDMI input

This diagram shows connections of a TV (with no HDMI input) and DVD player (or other playback component) to the receiver.

**Important**
- With these connections, the picture is not output to the TV even if the DVD player is connected with an HDMI cable. Connect the receiver and TV using the same type of video cable as used to connect the receiver and player.
- Also, when the receiver and TV are connected by anything other than an HDMI cable, the OSD function allowing display of the receiver’s settings, operations, etc., on the TV’s screen cannot be used. In this case, watch the receiver’s front panel display while performing the various operations and making settings.
In order to listen to HD audio with this receiver, connect an HDMI cable, and use analog video cable for video signal input. Depending on the player, it may not be possible to output video signals to both HDMI and other video output (composite, etc.) simultaneously, and it may be necessary to make video output settings. Please refer to the operating instructions supplied with your player for more information.

If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 29).

When connecting to a DVD player with an optical digital audio cable or a coaxial digital audio cable, performing input terminal settings are necessary (page 62).

Connecting a satellite/cable receiver or other set-top box
Satellite and cable receivers, and terrestrial digital TV tuners are all examples of so-called ‘set-top boxes’. When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Setup menu on page 62).

Even if your set-top box is equipped with an HDMI output terminal, in some cases the sound is output from the digital audio output (optical or coaxial) and only the video is output from the HDMI output terminal. In this case, make the HDMI and digital audio connections as shown below.

— If you use an optical digital audio cable or RCA (analog) audio cable, you’ll need to tell the receiver which digital input you connected the set-top box to (see The Input Setup menu on page 62).
Connecting other audio components

This receiver has both digital and analog inputs, allowing you to connect audio components for playback. When you set up the receiver you’ll need to tell the receiver which input you connected the component to (see also The Input Setup menu on page 62).

- If your turntable has line-level outputs (i.e., it has a built-in phono pre-amp), connect it to the ANALOG IN 1 (CD) inputs instead.

Connecting the subwoofer

- If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 107) to LARGE.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Connecting AM/FM antennas

Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Connecting external antennas on page 33).
1 Pull off the protective shields of both AM antenna wires.
2 Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3 Fix the AM loop antenna to the attached stand.
   To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b).
   • If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4 Place the AM antenna on a flat surface and in a direction giving the best reception.
5 Connect the FM wire antenna into the FM antenna socket.
   For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.

Connecting external antennas
To improve FM reception, connect an external FM antenna to FM UNBAL 75 Ω.

Connecting your equipment (In case of VSX-90)

Making MULTI-ZONE connections
Equipment connected to this receiver in a different room (sub zone) from a room with this receiver (main zone) can be played by operating this receiver (multi-zone function). Not only can the same source be played simultaneously in the main and sub zones, different sources can also be played.

By preparing a different amplifier with a HDMI input terminal in the sub zone, the other amplifier and TV monitor can be connected to this receiver. When there is no other amplifier, the speaker terminal of this receiver can be used. High resolution via HDMI can be enjoyed in the sub zone (HDZONE function).

Important
• The settings must be changed at ZONE Setup in order to use the multi-zone function (page 114).
• MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 114).

MULTI-ZONE listening options
The following table shows the signals that can be output to ZONE 2 and HDZONE:

<table>
<thead>
<tr>
<th>Sub Zone</th>
<th>Input functions available</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZONE 2</td>
<td>DVD, SAT/CBL, INTERNET RADIO, PANDORA, Spotify, MEDIA SERVER, FAVORITES, iPod/USB, TV, CD, TUNER, BT AUDIO (Outputs analog audio and composite video.)</td>
</tr>
<tr>
<td>ZONE 2</td>
<td>DVD, SAT/CBL, INTERNET RADIO, PANDORA, Spotify, MEDIA SERVER, FAVORITES, iPod/USB, TV, CD, TUNER, BT AUDIO (Outputs HDMI audio and video signals.)</td>
</tr>
<tr>
<td>HDZONE (HDMI)</td>
<td>BD, DVD, SAT/CBL, INTERNET RADIO, PANDORA, Spotify, MEDIA SERVER, FAVORITES, iPod/USB, HDMI 1, HDMI 2, HDMI 3, HDMI 4, HDMI 5, HDMI 6/MHL, BT AUDIO (Outputs HDMI audio and video signals.)</td>
</tr>
</tbody>
</table>

a • It is not possible to down-convert the audio and video input signals from the HDMI input terminals, digital input terminals (OPTICAL and COAXIAL) and the COMPONENT VIDEO input terminals and output them to ZONE 2.
   • When any of the INTERNET RADIO, PANDORA, Spotify, MEDIA SERVER, FAVORITES, iPod/USB or BT AUDIO inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the ZONE 2. (Inputs other than the ones listed here can be selected.)
   • The same limitations apply when one of the above inputs is selected for the ZONE 2.
b • The inputs that can be switched differ according to how terminals HDMI IN 1 to IN 6 are assigned. Upon shipment from the factory, the input terminals are assigned to DVD, SAT/CBL, HDMI 3, HDMI 4, HDMI 5 and HDMI 6, in order starting from terminal HDMI IN 1.
   • The video/audio signals of the RCA analog input terminals, the digital input terminals (OPTICAL and COAXIAL) and the COMPONENT VIDEO input terminals cannot be up-converted and output to the HDZONE.
   • When any of the HDMI 3 to HDMI 6/MHL inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the HDZONE. (Inputs other than the ones listed here can be selected.)
   • The same limitations apply when one of the above inputs is selected for the HDZONE.
   • When any of the INTERNET RADIO, PANDORA, Spotify, MEDIA SERVER, FAVORITES, iPod/USB or BT AUDIO inputs is selected in the main zone, it is only possible to select the same input as in the main zone for the HDZONE. (Inputs other than the ones listed here can be selected.)
   • The same limitations apply when one of the above inputs is selected for the HDZONE.
Basic MULTI-ZONE setup (ZONE 2)
- Connect a separate amplifier to the AUDIO ZONE 2 OUT jacks on this receiver.
  You should have a pair of speakers attached to the sub zone amplifier as shown in the following illustration.

MULTI-ZONE setup using speaker terminals (ZONE 2)
- You must select ZONE 2 in Speaker system setting (page 110) to use this setup.
- Connect a pair of speakers to the surround back speaker terminals.
  You should have a pair of speakers attached to the surround back speaker terminals as shown below.

MULTI-ZONE setup using HDMI terminal (HDZONE)
- Important
  - MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 114).
  - To use the HDZONE functions, set Control or Control Mode in HDMI Setup to OFF. For details, see HDMI Setup on page 86.
- Connect a separate receiver to the HDMI OUT 2 (HDZONE) terminal on this receiver.
  Connect speakers and a TV to the HDZONE receiver as shown on the illustration below.
Multi-zone connection using the HDMI terminal and speaker terminals (HDZONE)

**Important**
- The settings must be changed at ZONE Setup in order to use the HDZONE function (page 114).
- To use the HDZONE functions, set Control or Control Mode in HDMI Setup to Off. For details, see HDMI Setup on page 86.
- You must select HDZONE in Speaker system setting (page 110) to use this setup.

1. Connect the speaker to the surround back speaker terminal.
   Which speaker terminal is connected defers depending on the Speaker System (page 110) setting. For details, see Installing your speaker system on page 25. The following figure shows the connection of the surround back speaker terminal.

2. Connect a TV monitor to the HDMI OUT 2 (HDZONE) terminal on this receiver.

Connecting to the network through LAN interface

By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations. To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand. When connected in this way, you can play audio files stored on the components on the local network, including your computer.

1. Connect the LAN terminal on this receiver to the LAN terminal on your router (with or without the built-in DHCP server function) with a straight LAN cable (CAT 5 or higher).
2. Turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. For details, see Setting network connection on page 55.

**LAN terminal specifications**
- LAN terminal: Ethernet jack (10BASE-T/100BASE-TX)

**Notes**
- When connecting the wireless LAN, please use with the wireless LAN antenna upright.
- The range of movement of the wireless LAN antenna is as indicated in the diagram below. There is danger that you may break it if unnecessary force is applied.

- Refer to the operation manual of the equipment you have as the connected equipment and connection method may differ depending on your Internet environment.
- When using a broadband Internet connection, a contract with an Internet service provider is required. For more details, contact your nearest Internet service provider.
Connecting your equipment (In case of VSX-90)

Connecting an iPod

This receiver has a dedicated iPod terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver.

An iPod/iPhone can be connected to the receiver. For details on supported models and versions of the respective products, see Playing an iPod on page 67.

- Switch the receiver into standby, and then use the iPod cable to connect your iPod to the iPod/iPhone terminal on the front panel of this receiver.
  - For the cable connection, also refer to the operating instructions for your iPod.
  - When connecting an iPhone to this unit, keep the iPhone at least 20 cm (0.66 ft) away from this unit. If the iPhone is kept closer to this unit and a telephone call is received by the iPhone, noise may be output from this device.
  - iPod recharging occurs whenever an iPod is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
  - For instructions on playing the iPod, see Playing an iPod on page 67.

Connecting an MHL-compatible device

An MHL-compatible mobile device can be connected to enjoy 3D/Full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver. Use the MHL cable to connect the device.

- Switch the receiver into standby then use the MHL cable to connect your MHL enabled device to the MHL terminal on the rear panel of this receiver.
  - To automatically switch to the MHL input when an MHL-compatible device is connected, see MHL Setup on page 112.
  - The MHL-compatible device is recharged whenever it is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
  - For instructions on playing the MHL-compatible device, see Playing an MHL-compatible device on page 69.
  - Do not place the MHL device on this unit which has the power turned on.

Connecting a USB device

It is possible to play audio and photo files by connecting USB devices to this receiver.

- Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.
  - This receiver does not support a USB hub.
  - For instructions on playing the USB device, see Playing a USB device on page 68.
Connecting an IR receiver

If you keep your stereo components in a closed cabinet or shelving unit, or you wish to use the sub zone remote control in another zone, you can use an optional IR receiver (such as a Niles or Xantech unit) to control your system instead of the remote sensor on the front panel of this receiver.

- Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
- Note that other manufacturers may not use the IR terminology. Refer to the manual that came with your component to check for IR compatibility.
- If using two remote controls (at the same time), the IR receiver’s remote sensor takes priority over the remote sensor on the front panel.

1. Connect the IR receiver sensor to the IR IN jack on the rear of this receiver.

2. Connect the IR IN jack of another component to the IR OUT jack on the rear of this receiver to link it to the IR receiver.

Switching components on and off using the 12 volt trigger

You can connect components in your system (such as a screen or projector) to this receiver so that they switch on or off using 12 volt triggers when you select an input function. However, you must specify which input functions switch on the trigger using the The Input Setup menu on page 62. Note that this will only work with components that have a standby mode.

- Connect the 12 V TRIGGER jack of this receiver to the 12 V trigger of another component. Use a cable with a mono mini-plug on each end for the connection. After you’ve specified the input functions that will switch on the trigger, you’ll be able to switch the component on or off just by pressing the input function(s) you’ve set on page 62.

Plugging in the receiver

Only plug in after you have connected all your components to this receiver, including the speakers.

**CAUTION**

- Handle the power cord by the plug part. Do not pull out the plug by tugging the cord, and never touch the power cord when your hands are wet, as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, or other object on the power cord or pinch the cord in any other way. Never make a knot in the cord or tie it with other cables. The power cords should be routed so that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electric shock. Check the power cord once in a while. If you find it damaged, ask your nearest Pioneer authorized independent service company for a replacement.
- Do not use any power cord other than the one supplied with this unit.
- Do not use the supplied power cord for any purpose other than that described below.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.
- Make sure the blue STANDBY/ON light has gone out before unplugging.

1. Plug the supplied power cord into the AC IN socket on the back of the receiver.
2. Plug the other end into a power outlet.
Connecting your equipment

This receiver provides you with many connection possibilities, but it doesn’t have to be difficult. This chapter explains the kinds of components you can connect to make up your home theater system.

⚠️ CAUTION

- Before making or changing the connections, switch off the power and disconnect the power cord from the power outlet. Plugging in should be the final step.
- When making connections, also keep the power cords of the devices being connected unplugged from the power outlets.
- Depending on the device being connected (CD, DVD or BD player, etc.), the methods of connection and terminal names may differ from the explanations in this manual. Also refer to the operating instructions of the respective devices.

Connecting your equipment (In case of VSX-45)

Determining the speakers’ application
This unit permits you to build various surround systems, in accordance with the number of speakers you have.
- Be sure to connect speakers to the front left and right channels (L and R).
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal.
  Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Important
- The Speaker System setting must be made if you use any of the connections shown below other than [A] (see Speaker system setting on page 110).
- Speaker play can be switched on or off by pressing the SP-A/B button (audio may not be output from all connected speakers).

[A] 5.2 channel surround system connection
*Default setting
- Speaker System setting: 5.2ch

![Diagram of 5.2 channel surround system connection]

The 5.2 channel surround system is the most commonly-used in home theaters.

[B] Speaker B connection
- Speaker System setting: Speaker B

![Diagram of Speaker B connection]

With these connections you can simultaneously enjoy 3.1-channel sound in the main zone with stereo playback of the same sound on the B speakers. The same connections also allow for 5.1-channel surround sound in the main zone when not using the B speakers.

[C] Front Bi-amping connection (High quality surround)
- Speaker System setting: Front Bi-Amp

![Diagram of Front Bi-amping connection]

Play the front speaker in high sound quality (bi-amp).

Other speaker connections
- Your favorite speaker connections can be selected even if you have fewer than 5.2 speakers (except front left/right speakers).
- When not connecting a subwoofer, connect speakers with low frequency reproduction capabilities to the front channel. (The subwoofer’s low frequency component is played from the front speakers, so the speakers could be damaged.)
- After connecting, be sure to conduct the Full Auto MCACC (speaker environment setting) procedure. See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61.
Connecting your equipment (In case of VSX-45)

Placing the speakers
Refer to the chart below for placement of the speakers you intend to connect.

Listener speaker placement guidelines
Listener speakers, such as Left, Right, Center, Left Surround, and Right Surround, are placed at ear level relative to the listener position.

![Speaker Placement Chart]

Some tips for improving sound quality
Where you put your speakers in the room has a big effect on the quality of the sound. The following guidelines should help you to get the best sound from your system.

- The subwoofer can be placed on the floor. Ideally, the other speakers should be at about ear-level when you’re listening to them. Putting the speakers on the floor (except the subwoofer), or mounting them very high on a wall is not recommended.
- For the best stereo effect, place the front speakers 2 m to 3 m (6 ft. to 9 ft.) apart, at equal distance from the TV.
- If you’re going to place speakers around your CRT TV, use shielded speakers or place the speakers at a sufficient distance from your CRT TV.
- If you’re using a center speaker, place the front speakers at a wider angle. If not, place them at a narrower angle.
- Place the center speaker above or below the TV so that the sound of the center channel is localized at the TV screen. Also, make sure the center speaker does not cross the line formed by the leading edge of the front left and right speakers.
- It is best to angle the speakers towards the listening position. The angle depends on the size of the room. Use less of an angle for bigger rooms.
- Surround speakers should be positioned 60 cm to 90 cm (2 ft. to 3 ft.) higher than your ears and tilted slightly downward. Make sure the speakers don’t face each other. For DVD-Audio, the speakers should be more directly behind the listener than for home theater playback.
- Try not to place the surround speakers farther away from the listening position than the front and center speakers. Doing so can weaken the surround sound effect.

Connecting the speakers
Each speaker connection on the receiver comprises a positive (+) and negative (−) terminal. Make sure to match these up with the terminals on the speakers themselves.

This unit supports speakers with a nominal impedance of 6Ω to 16Ω.

**CAUTION**
- These speaker terminals carry HAZARDOUS LIVE voltage. To prevent the risk of electric shock when connecting or disconnecting the speaker cables, disconnect the power cord before touching any uninsulated parts.
- Make sure that all the bare speaker wire is twisted together and inserted fully into the speaker terminal. If any of the bare speaker wire touches the back panel it may cause the power to cut off as a safety measure.

Bare wire connections
Make sure that all speakers are securely installed. This not only improves sound quality, but also reduces the risk of damage or injury resulting from speakers being knocked over or falling in the event of external shocks such as earthquakes.

1. Twist exposed wire strands together.
2. Loosen terminal and insert exposed wire.
3. Tighten terminal.

**CAUTION**
- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Banana plug connections
If you want to use speaker cables terminated with banana plugs, screw the speaker terminal fully shut, then plug the banana plug into the end of the speaker terminal.

---

Notes
- Please refer to the manual that came with your speakers for details on how to connect the other end of the speaker cables to your speakers.
- Use an RCA cable to connect the subwoofer. It is not possible to connect using speaker cables.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.
Installing your speaker system

At the very least, front left and right speakers only are necessary. Note that your main surround speakers should always be connected as a pair.

Standard surround connection

**Speaker System setting:** 5.2ch

Speaker B connection

**Speaker System setting:** Speaker B
Bi-amping your speakers

Speaker System setting: Front Bi-Amp

Bi-amping is when you connect the high frequency driver and low frequency driver of your speakers to different amplifiers for better crossover performance. Your speakers must be bi-ampable to do this (having separate terminals for high and low) and the sound improvement will depend on the kind of speakers you’re using.

CAUTION
- Most speakers with both High and Low terminals have two metal plates that connect the High to the Low terminals. These must be removed when you are bi-amping the speakers or you could severely damage the amplifier. See your speaker manual for more information.
- If your speakers have a removable crossover network, make sure you do not remove it for bi-amping. Doing so may damage your speakers.

Bi-wiring your speakers

Your speakers can also be bi-wired if they support bi-amping.
- With these connections, the Speaker System setting makes no difference.

CAUTION
- Don’t connect different speakers from the same terminal in this way.
- When bi-wiring as well, heed the cautions for bi-amping shown above.
- To bi-wire a speaker, connect two speaker cords to the speaker terminal on the receiver. Using a banana plug for the second connection is recommended.

About the audio connection

Types of cables and terminals | Transferable audio signals
--- | ---
HDMI | HD audio
Digital (Coaxial) | Conventional digital audio
Digital (Optical) | Conventional analog audio
RCA (Analogue) (White/Red) | Conventional analog audio

- With an HDMI cable, video and audio signals can be transferred in high quality over a single cable.
- For HD audio, see About HDMI on page 44.
About HDMI

The HDMI connection transfers uncompressed digital video, as well as almost every kind of digital audio. This receiver incorporates High-Definition Multimedia Interface (HDMI®/TM) technology. This receiver supports the functions described below through HDMI connections.

- Digital transfer of uncompressed video (contents protected by HDCP (1080p/24, 1080p/60, etc.))
- HDCP 2.2 compatible terminal: BD, DVD (HDMI IN 1), SAT/CBL (HDMI IN 2), HDMI OUT
- 3D signal transfer
- Deep Color signal transfer
- x.v.Color signal transfer
- ARC (Audio Return Channel)
- 4K signal transfer
  — This may not operate properly, depending on the connected equipment.
  — 4K 24p, 4K 25p, 4K 30p, 4K 50p and 4K 60p signals are supported.
- Input of the following digital audio formats:
  — Dolby Digital, Dolby Digital Plus, DTS, High bitrate audio (Dolby TrueHD, DTS-HD Master Audio, DTS-HD High Resolution Audio), CD, SACD (DSD signal)
- Synchronized operation with components using the Control with HDMI function (see Control with HDMI function on page 85)

Notes

- An HDMI connection can only be made with DVI-equipped components compatible with both DVI and High Bandwidth Digital Content Protection (HDCP). If you choose to connect to a DVI connector, you will need a separate adaptor (DVI→HDMI) to do so. A DVI connection, however, does not support audio signals. Consult your local audio dealer for more information.
- If you connect a component that is not compatible with HDCP, an HDCP ERROR message is displayed on the front panel display. Some components that are compatible with HDCP still cause this message to be displayed, but so long as there is no problem with displaying video this is not a malfunction.
- Depending on the component you have connected, using a DVI connection may result in unreliable signal transfers.
- This receiver supports SACD, Dolby Digital Plus, Dolby TrueHD and DTS-HD Master Audio. To take advantage of these formats, however, make sure that the component connected to this receiver also supports the corresponding format.
- Use a High Speed HDMI®/TM Cable. If an HDMI cable other than a High Speed HDMI®/TM Cable is used, it may not work properly.
- When an HDMI cable with a built-in equalizer is connected, it may not operate properly.
- Signal transfer is only possible when connected to a compatible component.
- HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback.
- Turning on/off the device connected to this unit's HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

*x.v.Color* and *x.v.Color* are trademarks of Sony Corporation.

Connecting your TV and playback components

Connecting using HDMI

If you have an HDMI or DVI (with HDCP) equipped component (Blu-ray Disc player (BD), etc.), you can connect it to this receiver using a commercially available HDMI cable.

If the TV and playback components support the Control with HDMI feature, the convenient Control with HDMI functions can be used (see Control with HDMI function on page 85).

This connection is required in order to listen to the sound of the TV over the receiver.
For input components, connections other than HDMI connections are also possible (see Connecting your DVD player with no HDMI output on page 45).

If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables.
— When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 86).

After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
— If you use a coaxial digital audio cable, you’ll need to tell the receiver which digital or analog audio input you connected the TV to (see The Input Setup menu on page 62).
— Please refer to the TV’s operation manual for directions on connections and setup for the TV.

If the TV to be connected using HDMI supports 4K/60p, you can switch the 4K/60p signal output setting in accordance with TV performance. When the 4K/60p setting is changed to 4:4:4, the video image may not be output normally unless the HDMI cable supports 4K/60p 4:4:4 24 bit (18 Gbps transmission). In such a case, select 4:2:0 (page 92).

You cannot input 4K/60p 4:4:4 24 bit video from HDMI IN 3 to the IN 5 terminal. Use the BD IN, HDMI IN 1 or HDMI IN 2 terminal.

If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 44).
— When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV can be input to the receiver via the HDMI OUT terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 86).

When connecting to a DVD player with an optical digital audio cable or a coaxial digital audio cable, performing input terminal settings are necessary (page 69).
Connecting your TV with no HDMI input
This diagram shows connections of a TV (with no HDMI input) and DVD player (or other playback component) to the receiver.

**Important**

- With these connections, the picture is not output to the TV even if the DVD player is connected with an HDMI cable. Connect the receiver and TV using the same type of video cable as used to connect the receiver and player.
- Also, when the receiver and TV are connected by anything other than an HDMI cable, the OSD function allowing display of the receiver’s settings, operations, etc., on the TV’s screen cannot be used. In this case, watch the receiver’s front panel display while performing the various operations and making settings.

![Diagram of TV and DVD player connections](image)

- In order to listening to HD audio with this receiver, connect an HDMI cable, and use analog video cable for video signal input. Depending on the player, it may not be possible to output video signals to both HDMI and other video output (composite, etc.) simultaneously, and it may be necessary to make video output settings. Please refer to the operating instructions supplied with your player for more information.

- If you want to listen to the sound of the TV over the receiver, connect the receiver and TV with audio cables (page 44).
- When connecting to a DVD player with an optical digital audio cable or a coaxial digital audio cable, performing input terminal settings are necessary (page 62).

Connecting a satellite/cable receiver or other set-top box
Satellite and cable receivers, and terrestrial digital TV tuners are all examples of so-called ‘set-top boxes’. When you set up the receiver you’ll need to tell the receiver which input you connected the set-top box to (see The Input Setup menu on page 62).

- When connecting to a satellite/cable TV tuner with an optical digital audio cable or a coaxial digital audio cable, performing input terminal settings are necessary (page 65).
If your set-top box is equipped with an HDMI output terminal, we recommend connecting it to the receiver’s HDMI SAT/CBL IN terminal. When doing so, also connect the receiver and TV by HDMI (see Connecting using HDMI on page 44).

Even if your set-top box is equipped with an HDMI output terminal, in some cases the sound is output from the digital audio output (optical or coaxial) and only the video is output from the HDMI output terminal. In this case, make the HDMI and digital audio connections as shown below.

When connecting to a satellite/cable TV tuner with an optical digital audio cable or a coaxial digital audio cable, performing input terminal settings are necessary (page 62).

If you use an optical digital audio cable, you’ll need to tell the receiver which digital input you connected the player to (see The Input Setup menu on page 62).

Connecting other audio components
This receiver has both digital and analog inputs, allowing you to connect audio components for playback. When you set up the receiver you’ll need to tell the receiver which input you connected the component to (see also The Input Setup menu on page 69).
Connecting your equipment (In case of VSX-45)

Connecting the subwoofer

- If you’re not using a subwoofer, change the front speaker setting (see Speaker Setting on page 107) to LARGE.
- If you have two subwoofers, the second subwoofer can be connected to the SUBWOOFER 2 terminal. Connecting two subwoofers increases the bass sound to achieve more powerful sound reproduction. In this case, the same sound is output from the two subwoofers.

Connecting AM/FM antennas

Connect the AM loop antenna and the FM wire antenna as shown below. To improve reception and sound quality, connect external antennas (see Connecting external antennas on page 49).

1. Pull off the protective shields of both AM antenna wires.
2. Push open the tabs, then insert one wire fully into each terminal, then release the tabs to secure the AM antenna wires.
3. Fix the AM loop antenna to the attached stand. To fix the stand to the antenna, bend in the direction indicated by the arrow (fig. a) then clip the loop onto the stand (fig. b). If you plan to mount the AM antenna to a wall or other surface, secure the stand with screws (fig. c) before clipping the loop to the stand. Make sure the reception is clear.
4. Place the AM antenna on a flat surface and in a direction giving the best reception. For best results, extend the FM antenna fully and fix to a wall or door frame. Don’t drape loosely or leave coiled up.
5. Connect the FM wire antenna into the FM antenna socket.

Connecting external antennas

To improve FM reception, connect an external FM antenna to FM UNBAL 75 Ω.

To improve AM reception, connect a 5 m to 6 m (16 ft. to 20 ft.) length of vinyl-coated wire to the AM LOOP terminals without disconnecting the supplied AM loop antenna. For the best possible reception, suspend horizontally outdoors.
Connecting to the network through LAN interface

By connecting this receiver to the network via the LAN terminal, you can listen to Internet radio stations. To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand. When connected in this way, you can play audio files stored on the components on the local network, including your computer.

Connect the LAN terminal on this receiver to the LAN terminal on your router (with or without the built-in DHCP server function) with a straight LAN cable (CAT 5 or higher).

Turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. For details, see Setting network connection on page 55.

LAN terminal specifications

- LAN terminal : Ethernet jack (10BASE-T/100BASE-TX)

Notes

- When connecting the wireless LAN, please use with the wireless LAN antenna upright.
- The range of movement of the wireless LAN antenna is as indicated in the diagram below. There is danger that you may break it if unnecessary force is applied.

- Refer to the operation manual of the equipment you have as the connected equipment and connection method may differ depending on your Internet environment.
- When using a broadband Internet connection, a contract with an Internet service provider is required. For more details, contact your nearest Internet service provider.

Connecting an iPod

This receiver has a dedicated iPod terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver.

An iPod/iPhone can be connected to the receiver. For details on supported models and versions of the respective products, see Playing an iPod on page 67.

- Switch the receiver into standby, and then use the iPod cable to connect your iPod to the iPod/iPhone terminal on the front panel of this receiver.
  - For the cable connection, also refer to the operating instructions for your iPod.
  - When connecting an iPhone to this unit, keep the iPhone at least 20 cm (0.66 ft) away from this unit. If the iPhone is kept closer to this unit and a telephone call is received by the iPhone, noise may be output from this device.
  - iPod recharging occurs whenever an iPod is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
  - For instructions on playing the iPod, see Playing an iPod on page 67.

Connecting a USB device

It is possible to play audio and photo files by connecting USB devices to this receiver.

- Switch the receiver into standby then connect your USB device to the USB terminal on the front panel of this receiver.
  - This receiver does not support a USB hub.
  - For instructions on playing the USB device, see Playing a USB device on page 68.
Connecting your equipment (In case of VSX-45)

Connecting an MHL-compatible device
An MHL-compatible mobile device can be connected to enjoy 3D/Full-HD videos, high quality multi-channel audio, and photos etc., with charge the battery on the receiver. Use the MHL cable to connect the device.

- Switch the receiver into standby then use the MHL cable to connect your MHL enabled device to the MHL terminal on the rear panel of this receiver.
  - To automatically switch to the MHL input when an MHL-compatible device is connected, see MHL Setup on page 112.
  - The MHL-compatible device is recharged whenever it is connected to this unit. (Recharging is enabled only when the unit’s power is turned on.)
  - For instructions on playing the MHL-compatible device, see Playing an MHL-compatible device on page 69.
  - Do not place the MHL device on this unit which has the power turned on.

Connecting an IR receiver
If you keep your stereo components in a closed cabinet or shelving unit, or you wish to use the sub zone remote control in another zone, you can use an optional IR receiver (such as a Niles or Xantech unit) to control your system instead of the remote sensor on the front panel of this receiver.

- Remote operation may not be possible if direct light from a strong fluorescent lamp is shining on the IR receiver remote sensor window.
- Note that other manufacturers may not use the IR terminology. Refer to the manual that came with your component to check for IR compatibility.
- If using two remote controls (at the same time), the IR receiver’s remote sensor takes priority over the remote sensor on the front panel.

1. Connect the IR receiver sensor to the IR IN jack on the rear of this receiver.

2. Connect the IR IN jack of another component to the IR OUT jack on the rear of this receiver to link it to the IR receiver.

Please see the manual supplied with your IR receiver for the type of cable necessary for the connection.
Switching components on and off using the 12 volt trigger

You can connect components in your system (such as a screen or projector) to this receiver so that they switch on or off using 12 volt triggers when you select an input function. However, you must specify which input functions switch on the trigger using the The Input Setup menu on page 62. Note that this will only work with components that have a standby mode.

- Connect the 12 V TRIGGER jack of this receiver to the 12 V trigger of another component.
  Use a cable with a mono mini-plug on each end for the connection.
  After you've specified the input functions that will switch on the trigger, you'll be able to switch the component on or off just by pressing the input function(s) you've set on page 62.

Plugging in the receiver

Only plug in after you have connected all your components to this receiver, including the speakers.

⚠️ CAUTION

- Handle the power cord by the plug part. Do not pull out the plug by tugging the cord, and never touch the power cord when your hands are wet, as this could cause a short circuit or electric shock. Do not place the unit, a piece of furniture, or other object on the power cord or pinch the cord in any other way. Never make a knot in the cord or tie it with other cables. The power cords should be routed so that they are not likely to be stepped on. A damaged power cord can cause a fire or give you an electric shock. Check the power cord once in a while. If you find it damaged, ask your nearest Pioneer authorized independent service company for a replacement.
- The receiver should be disconnected by removing the mains plug from the wall socket when not in regular use, e.g., when on vacation.
- Plug the AC power cord into a convenient AC power outlet.
Basic Setup

Initial settings of this receiver .................................................................................................................. 53
Setting with a special application (Start-up Navi) .................................................................................. 53
Perform settings using the AVNavigator built into this receiver .......................................................... 53
Setting by referring to the operating instructions .................................................................................. 55
Initial settings of this receiver

There are three ways to initialize this receiver.
- Setting with a special application (Start-up Navi) on page 53
- Perform settings using the AVNavigator built into this receiver on page 53
- Setting by referring to the operating instructions on page 55

Important
- After unpacking, turning on the power, and returning to initial factory settings (page 95), the WIRELESS indicator slowly flashes. This is not a malfunction.
- This receiver is designed to automatically enter WAC mode when turning on the power of this receiver in the initial factory settings state. For details about WAC mode, please refer to page 57. After the network settings (page 55) have been completed, the WIRELESS indicator flashing disappears.
- When the network is not connected, even though the WIRELESS indicator is blinking, there is no problem using it in this state.

Setting with a special application (Start-up Navi)

If you have a smart phone or tablet, once you download and start the special application, the settings can be done according to the instructions by the application.
- If you have an iPhone or iPod touch
- If you have an Android device

Perform settings using the AVNavigator built into this receiver

If you have a Windows PC or Mac, the settings can be performed using the AVNavigator built into this receiver.

How to use the built-in AVNavigator

The built-in AVNavigator is equipped with Wiring Navi, which allows you to perform connection of this receiver and initial settings in interactive mode. By simply following the screen prompts to connect and set the unit, highly accurate initial settings can be performed easily. Additionally, in order to use various functions easily, contents linked to the receiver can be used.
With a Windows PC, you can use the following method to launch AVNavigator. Launch Explorer and right-click <VSX-90> or <VSX-45> displayed in the ‘Network’ folder, then click ‘View device webpage’.

On a Mac, launch Safari and click <VSX-90> or <VSX-45> displayed in ‘Bonjour’ on the Bookmarks bar.

— If ‘Bonjour’ is not displayed, tick the ‘Include Bonjour in the Favorites bar’ check box on the ‘Advanced’ tab in the Safari ‘Preferences...’ menu.

When using an iPad/iPhone/iPod touch, from the App Store, download iControlAV5, which is a free application. After launching iControlAV5, follow the instructions on the screen. After that, on the Home screen, tap ‘AVNavigator’ or the icon.

When using an Android device, from Google Play Store, download iControlAV5, which is a free application. After launching iControlAV5, follow the instructions on the screen. After that, on the Home screen, tap the icon.

Select and use the desired function.
AVNavigator includes the following functions:

- **Wiring Navi** – Guides you through connections and initial settings in dialog fashion. High precision initial settings can be made easily.
- **Interactive Operation Guide** (VSX-90 only) – The receiver will be operated using the remote control on the screen and you can view function explanations or videos. Explanations of the functions that are operated using the remote control are also automatically displayed.
- **Network Setup** – Used to make network-related settings.
Setting by referring to the operating instructions

Use HOME MENU when referring to the operating instructions for various settings.

About the Home Menu

This receiver’s Home Menu (HOME MENU) can be used to make various settings and to check and adjust items that have been set.

- With factory default settings, the Home Menu screen will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable.
- VSX-90 only: You can change where the screen is output in the MAIN/HDZONE (page 114) and HDMI output (page 92) settings.
- HOME MENU may not start immediately after turning the main power of this receiver on or when settings have been changed. In such case, operate after a while.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode.
2. To display the Home Menu screen, press HOME MENU on the remote control.

A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

The top level in the Home Menu is as shown below. Refer to the respective explanations to set, check and adjust as necessary.

- Network, Bluetooth – Conducts the setup necessary to connect this unit to the network (see Setting network connection on page 55).
- MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) – Use this to make automatic settings and detailed manual settings for the surround sound. For details, see Making receiver settings from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu on page 103.
- System Setup – Use this to make various settings related to this system. For details, see Making receiver settings from the System Setup menu on page 110.

Setting network connection

This part explains the connection settings for all networks.

Connecting this receiver and router with a wired LAN

Connecting a router with this receiver and router with a wireless LAN

Connecting a router with a WPS-PBC function with this receiver

Connecting the router with this receiver with your iPhone, iPod touch, or iPad (iOS version 5.0 or later)
The wireless LAN settings for iPhone, iPod touch, or iPad can be applied to this receiver.

Connecting the router with this receiver with your iPhone, iPod touch, or iPad (iOS version 7.1 or later)
The wireless LAN settings for iPhone, iPod touch, or iPad can be applied to this receiver.

Connecting the router with this receiver with your computer or smart phone
Directly connect this receiver with your computer or smart phone. Configure the settings of this receiver via a Web browser from a computer or smart phone.

When you have a wireless LAN function on your computer or smart phone

When you do not have a wireless LAN function on your computer or smart phone

When you have a wireless LAN function on your computer or smart phone (wired LAN only)

When you do not have a wireless LAN function on your computer or smart phone (wired LAN only)

Automatically setting the connection

Manually setting the connection

If you do not have a router

Directly connecting your smart phone to this receiver (Wireless Direct)

If you do not have a router

Connecting your computer or smart phone to this receiver through a wireless LAN connection

If you do not have a router

Connecting your computer or smart phone to this receiver through a wired LAN connection

When connection method B, C, D, E, F, or G is selected, check that the LAN cable is not connected to this receiver.

Warning when connecting a wireless LAN router with this receiver

SSID is compatible only with single-byte alphanumeric characters and some symbols such as the underbar. If characters other than these are used, change the SSID before executing network settings. Refer to the user’s manual for your router for information on SSID.

Some network functions may not be used with Wireless Direct, iControl AV5, AirPlay, and HTC connect can be used.

When setting this receiver by A–H, first show the settings screen using the following procedures.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
2. Select ‘Network, Bluetooth’ from the HOME MENU.
3 Select the setting you want to adjust. If you are doing this for the first time, you may want to adjust these settings in order:

- **Network Information** – The setting status of the following network-related items can be checked (page 60).
- **Network Type** – Select the network connection method.
- **Network Connection** – Connect to the network.
- **Network Option** – Set the network other than for connection (page 60).
- **Bluetooth Setup** – Set Bluetooth (page 60).

A: Connecting with a LAN cable (wired LAN)

Simply connect the LAN cable. Network settings are unnecessary.

- When wireless LAN is set once, the following procedures 1 through 3 must be executed.
- Only when connected to a network without a DHCP server function, the following network settings are necessary. Check the setting value with the provider or network administrator in advance when executing the settings. Also refer to the user’s manual for network equipment.

- **IP Address**

  The IP address to be entered must be defined within the following ranges. If the IP address defined is beyond the following ranges, you cannot play back audio files stored on components on the network or listen to Internet radio stations.

  Class A: 10.0.0.1 to 10.255.255.254  
  Class B: 172.16.0.1 to 172.31.255.254  
  Class C: 192.168.0.1 to 192.168.255.254

- **Subnet Mask**

  In case an xDSL modem or a terminal adapter is directly connected to this receiver, enter the subnet mask provided by your ISP on paper. In most cases, enter 255.255.255.0.

- **Default Gateway**

  In case a gateway (router) is connected to this receiver, enter the corresponding IP address.

- **Primary DNS Server/Secondary DNS Server**

  In case there is only one DNS server address provided by your ISP on paper, enter it in the 'Primary DNS Server' field. In case there are more than two DNS server addresses, enter 'Secondary DNS Server' in the other DNS server address field.

- **Proxy Hostname/Proxy Port**

  This setting is required when you connect this receiver to the Internet via a proxy server. Enter the IP address of your proxy server in the 'Proxy Hostname' field. Also, enter the port number of your proxy server in the 'Proxy Port' field.

1 Select ‘Network Type’ from the Network, Bluetooth menu.
2 Use ‹/› to select ‘Wired’.
3 Select ‘OK’, then press ENTER.

The on-screen display will be displayed. Select ‘YES’ and press ENTER.

The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.

4 Press HOME MENU.
5 Select ‘Network, Bluetooth’ from the HOME MENU.
6 Select ‘Network Connection’ from the Network, Bluetooth menu.
7 Select ‘Wired’ from the Network Connection menu.

B: Setting this receiver with iOS equipment (iOS version 5.0 or later)

The Wi-Fi settings of your iPod/iPhone/iPad (equipment with iOS version 5.0 or later) can be applied to this receiver.

- The iOS equipment and router must be connected through Wi-Fi.
- Check that the LAN cable is not connected to this receiver.

1 Unlock the iPod/iPhone/iPad. Check that the Wi-Fi operation mark is shown on the screen of the iOS equipment.

2 Select ‘Network Type’ from the Network, Bluetooth menu.
3 Use ‹/› to select ‘Wireless’.
4 Select ‘OK’, then press ENTER.

The on-screen display will be displayed. Select ‘YES’ and press ENTER.

The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.

5 Press HOME MENU.
6 Select ‘Network, Bluetooth’ from the HOME MENU.
7 Select ‘Network Connection’ from the Network, Bluetooth menu.

8 Select the DHCP setting you want. When you select 'ON', the network is automatically set up, and you do not need to follow Steps 9. Proceed with Step 10.

  - The IP address determined by the Auto IP function is 169.254.X.X. You cannot listen to an Internet radio station if the IP address is set for the Auto IP function.

9 Enter the IP Address, Subnet Mask, Default Gateway, Primary DNS Server and Secondary DNS Server.

Press ‹/› to select a number and ‹/› to move the cursor.

10 Select ‘OFF’ or ‘ON’ for the Enable Proxy Server setting to deactivate or activate the proxy server.

  - In case you select ‘OFF’, proceed with Step 13. In case you select ‘ON’, on the other hand, proceed with Step 11.

11 Enter the address of your proxy server or the domain name.

Use ‹/› to select a character, ‹/› to set the position, and ENTER to confirm your selection.

12 Enter the port number of your proxy server.

Use ‹/› to select a character, ‹/› to set the position, and ENTER to confirm your selection.

13 Select ‘OK’ to confirm the IP Address/Proxy setup.

9 Select 'Network Connection' from the Network, Bluetooth menu.
10 Select 'Network, Bluetooth' from the HOME MENU.
11 Select 'Network Connection' from the Network, Bluetooth menu.
12 Select 'OK', then press ENTER.
8 Select 'Wireless' from the Network Connection menu.
9 Select 'Wi-Fi Sharing'.
10 Connect the iOS equipment to the iPod/iPhone terminal on the front panel.
11 Select 'START', then press ENTER.
12 Tap [Allow] on iPod/iPhone/iPad.
The Wi-Fi settings of your iPod/iPhone/iPad is applied to this receiver.

C: Perform this receiver's settings using the iOS equipment (iOS version 7.1 or later)
The Wi-Fi settings of your iPod/iPhone/iPad (equipment with iOS version 7.1 or later) can be applied to this receiver.
- The iOS equipment and router must be connected through Wi-Fi.
- Check that the LAN cable is not connected to this receiver.
1 Unlock the iPod/iPhone/iPad.
Check that the Wi-Fi operation mark is shown on the screen of the iOS equipment.
2 Select 'Network Type' from the Network, Bluetooth menu.
3 Use \ to select 'Wireless'.
4 Select 'OK', then press ENTER.
The confirmation screen will be displayed. Select 'YES' and press ENTER.
The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.
5 Press HOME MENU.
6 Select 'Network, Bluetooth' from the HOME MENU.
7 Select 'Network Connection' from the Network, Bluetooth menu.
8 Select 'Wireless' from the Network Connection menu.
9 Select 'Wireless Accessory Config.'.
WAC (Wireless Accessory Configuration) mode is a mode that allows you to set the network settings by operating this receiver as a Wi-Fi access point.
10 Select 'START', then press ENTER.
The SSID and IP address will be displayed when WAC is active.
11 Select 'OK', then press ENTER.
12 Operate the screen of the iPhone, iPod touch, or iPad.
- Check that the Wi-Fi mark is displayed on the screen of the iPhone, iPod touch, or iPad.
  - If the mark is not displayed, activate Wi-Fi, and connect the iPhone, iPod touch, or iPad to a wireless LAN router.
- Select the settings.
- Select [Wi-Fi].
- In [Set new AIRPLAY speaker], select Friendly Name (iOS 7) or SSID (iOS 6 or older).
- Select [Next].
- Wait until the processing is complete.
Basic Setup

- Select [Complete].

Note
This screen is iOS 7.1. When software other than iOS 7.1 is installed on an iPhone, iPod touch, or iPad, the operation for the iPhone, iPod touch, or iPad may change.

D: WPS connection settings
WPS is an abbreviation for “Wi-Fi Protected Setup”. This is a standard stipulated by the Wi-Fi Alliance, and connection to WPS compatible equipment and security settings can be performed using simple operations. This receiver is compatible with PBC (push button) method and PIN method.
- Check that your router is compatible with PBC. If the router is not PBC-compatible, connect using the PIN method.
- Check that the LAN cable is not connected to this receiver.

1 Select ‘Network Type’ from the Network, Bluetooth menu.
2 Use ←/→ to select ‘Wireless’.
3 Select ‘OK’, then press ENTER.
The confirmation screen will be displayed. Select ‘YES’ and press ENTER.
The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.
4 Press HOME MENU.
5 Select ‘Network, Bluetooth’ from the HOME MENU.
6 Select ‘Network Connection’ from the Network, Bluetooth menu.
7 Select ‘Wireless’ from the Network Connection menu.
8 At ↑/↓, select ‘Auto’ and press ENTER.
9 Select the connection point to which the wireless LAN is to be connected with ↑/↓, and press ENTER.
10 Enter the password or WEP KEY at ↑/↓/←/→, and press ENTER.
   - ←/→ – Moves the cursor.
   - ↑/↓ – Selects the character to be entered.
   - VIDEO P. – The cursor switches the input character part and software keyboard part every time the button is pressed. A character is deleted by pressing the DEL on the software keyboard.

E: Automatically setting wireless LAN connection
1 Select ‘Network Type’ from the Network, Bluetooth menu.
2 Use ←/→ to select ‘Wireless’.
3 Select ‘OK’, then press ENTER.
The confirmation screen will be displayed. Select ‘YES’ and press ENTER.
The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.
4 Press HOME MENU.
5 Select ‘Network, Bluetooth’ from the HOME MENU.
6 Select ‘Network Connection’ from the Network, Bluetooth menu.
7 Select ‘Wireless’ from the Network Connection menu.
8 At ↑/↓, select ‘Auto’ and press ENTER.
9 Select the connection point to which the wireless LAN is to be connected with ↑/↓, and press ENTER.
10 Enter the password or WEP KEY at ↑/↓/←/→, and press ENTER.
   - ←/→ – Moves the cursor.
   - ↑/↓ – Selects the character to be entered.
   - VIDEO P. – The cursor switches the input character part and software keyboard part every time the button is pressed. A character is deleted by pressing the DEL on the software keyboard.

F: Manually setting wireless LAN connection
1 Select ‘Network Type’ from the Network, Bluetooth menu.
2 Use ←/→ to select ‘Wireless’.
3 Select ‘OK’, then press ENTER.
The confirmation screen will be displayed. Select ‘YES’ and press ENTER.
The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.
4 Press HOME MENU.

11 Select the DHCP setting you want.
Set the IP address of this receiver and the proxy. For details, see A: Connecting with a LAN cable (wired LAN) on page 56.

F: Manually setting wireless LAN connection
1 Select ‘Network Type’ from the Network, Bluetooth menu.
2 Use ←/→ to select ‘Wireless’.
3 Select ‘OK’, then press ENTER.
The confirmation screen will be displayed. Select ‘YES’ and press ENTER.
The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.
4 Press HOME MENU.
5 Select ‘Network, Bluetooth’ from the HOME MENU.
6 Select ‘Network Connection’ from the Network, Bluetooth menu.
7 Select ‘Wireless’ from the Network Connection menu.
8 Select [Manual] with the ↑ / ↓ button, and press the ENTER button.
9 Enter the SSID with the ↑ / ↓ / ← / → button, and press the ENTER button.
   - ↑ / ↓ – Moves the cursor.
   - ← / → – Selects the character to be entered.
   - VIDEO P. – The cursor switches the input character part and software keyboard part every time the button is pressed. A character is deleted by pressing the DEL on the software keyboard.
10 Select the encryption method with ← / →.
   • None – Does not set the encryption method.
   • WEP – Set to the WEP method.
   • WPA2/WPA, AES+TKIP – Set to the WPA-AES, WPA-TKIP, WPA2-AES, and WPA2-TKIP method.
11 Select ‘OK’, then press ENTER.
   When WEP or WPA2/WPA, AES+TKIP is selected, the password entry screen is displayed. Enter the password, select ‘OK’, and press ENTER.
12 Select the DHCP setting you want.
   Set the IP address of this receiver and the proxy. For details, see A: Connecting with a LAN cable (wired LAN) on page 56.

G: Setting with Web Control
To set with this method, your computer must be compatible with wireless LAN functions.
Network settings are performed on the browser on your computer.
   • Check that the LAN cable is not connected to this receiver.
1 Select ‘Network Type’ from the Network, Bluetooth menu.
2 Use ← / → to select ‘Wireless’.
3 Select ‘OK’, then press ENTER.
   The confirmation screen will be displayed. Select ‘YES’ and press ENTER.
   The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.
4 Press HOME MENU.
5 Select ‘Network, Bluetooth’ from the HOME MENU.
6 Select ‘Network Connection’ from the Network, Bluetooth menu.
7 Select ‘Wireless’ from the Network Connection menu.
8 Select ‘Wireless Accessory Config.’.
9 Select ‘START’, then press ENTER.
   The SSID and IP address will be displayed when WAC is active.
10 Select ‘OK’, then press ENTER.

11 Select [Pioneer Setup] (this receiver) from the list of wireless LAN connections on your computer.
   [Pioneer Setup: xxxxxxxxx] will be shown in the SSID field. “xxxxxxxx” represents a number unique to each product.
   • For your computer, iPhone, tablet computer, or wireless equipment, refer to the respective user’s manual.
   • Because this connection is not encrypted, there is a slight security risk.
   • Operation verification has been done for this setting with OS X v 10.7, Safari 5.1.
12 Start the Web browser.
   Access the following URL, and start setting this receiver. The Web Control menu will be shown.

   http://192.168.1.1

   • If you are using Safari, see Making network settings using Safari on page 115.
13 Click IP, Proxy Setting.
14 Setup the network settings manually and then press Apply.
   SSID items are generally shown automatically, but if they are not shown follow the procedures again and redo the settings. This receiver will restart and the settings will be applied to this receiver.

Notes
   • In case Web Control is not used, the screen above can be shown by entering the IP address of this receiver to the address field on the Web browser.
   • The IP address of this receiver can be checked by pressing the STATUS button on the remote controller (page 94) or Network Information (page 60).

H: Directly connecting this receiver with a smart phone by wireless (Wireless Direct)
1 Select ‘Network Connection’ from the Network, Bluetooth menu.
2 Select ‘Wireless Direct’ from the Network Connection menu.
3 Select ‘Security Protocol’ at ↑ / ↓.
4 Select the encryption method with ← / →.
   • None – Does not set the encryption method.
     — Because this connection is not encrypted, there is a slight security risk.
     — When the main power of this receiver is turned off, Wireless Direct is not started when it is turned on next time, and will operate with the network settings before Wireless Direct is started.
   • WEP – Set to the WEP method.
     — Even when the main power of this receiver is turned off, Wireless Direct will continuously operate the next time it is turned on.
5 Select ‘Frequency Band’ at ↑ / ↓.
Select the frequency with \( \leftrightarrow / \leftrightarrow \).
Select the frequency band of Wireless Direct connection. If you do not know the frequency band of your equipment, select 2.4GHz.
   - 2.4GHz – Uses the band of 2.4 GHz.
   - 5GHz – Uses the band of 5 GHz.

Select ‘OK’, then press ENTER.
When WEP is selected, the WEP KEY input screen is displayed. Enter the WEP KEY in 5 or 13 characters, select OK, and press ENTER.

Select ‘YES’ and press ENTER.

Select the SSID shown on the screen of this receiver from the list of wireless connection LAN’s corresponding to the equipment that you have.
- If the password is requested, enter the WEP KEY in procedure 7.

Checking the Network Information

The setting status of the following network-related items can be checked.
- IP Address (IPv4) – Check the IP address of this receiver.
- IP Address (IPv6) – Check the IP address of this receiver.
- MAC Address – Check the MAC address of this receiver.
- Friendly Name – Friendly Name on page 60.
- SSID – Check the SSID during wireless connection.
- Network Connection – Check the network connection status (Wired/Wireless/Wireless Direct).

Select ‘Network Information’ from the Network, Bluetooth menu.
Display the setting status of the network-related items.

Performing Bluetooth settings

Switches the Bluetooth function on/off.

1. Select ‘Bluetooth Setup’ from the Network, Bluetooth menu.
2. Use \( \leftrightarrow / \leftrightarrow \) to select the setting.
   - ON – Selected when using the Bluetooth function.
   - OFF – Selected when the Bluetooth function is not used.
3. Select ‘OK’, then press ENTER.
   The confirmation screen will be displayed. Select ‘YES’ and press ENTER.
The on-screen display will close, and the home menu will be disabled for about 60 seconds. After 60 seconds, execute the following operation.

Other network settings

Set the network other than for connection.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use \( \uparrow / \downarrow / \leftrightarrow / \rightarrow \rightarrow \leftrightarrow \) and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2. Select ‘Network, Bluetooth’ from the HOME MENU.
3. Select ‘Network Option’ from the Network, Bluetooth menu.

Select the setting you want to adjust.
If you are doing this for the first time, you may want to adjust these settings in order:
- Network Standby – Even when the unit is in standby mode, it is possible to turn on the power of the unit from iControlAV5 (page 60).
- Friendly Name – The name of the receiver displayed on a computer or other device connected to the network can be changed (page 60).
- AirPlay Password – Set the password to be entered when playing AirPlay with this receiver (page 60).
- Parental Lock – Restricts usage of network functions (page 60).
- Play ZONE Setup (VSX-90 only) – Select the zone for playing the audio contents of devices in the home network (page 61).
- Port Number Setting (VSX-90 only) – Sets the numbers of the ports where signals from IP Control are received (page 61).

Network Standby

Set so that the iControlAV5 function connected to the same LAN with the receiver can be used even while the unit is in standby status.

1. Select ‘Network Standby’ from the Network Option menu.
2. Specify whether the Network Standby is ON or OFF.
   - ON – Even when the unit is in standby mode, it is possible to turn on the power of the unit from the device iControlAV5 that is connected to the network.
   - OFF – The iControlAV5 function is not available while the receiver is in standby mode (power consumption during standby can be suppressed).

Friendly Name

1. Select ‘Friendly Name’ from the Network Option menu.
2. Select ‘Edit Name’ then select ‘Rename’.
   If after changing the name you want to restore the name to the default, select Default.
3. Input the name you want.
   Use \( \uparrow / \downarrow / \leftrightarrow / \rightarrow \rightarrow \leftrightarrow \) to set the position, and ENTER to confirm your selection.

AirPlay password

1. Select ‘AirPlay Password’ from the Network Option menu.
2. Enter the password up to 32 characters, select ‘OK’, and press ENTER.
3. Select ‘YES’ and press ENTER.

Parental Lock

Set restrictions for using Internet services. Also set the password accompanying the usage restrictions.
- Upon shipment from the factory, the password is set to “0000”.

Important

When the INTERNET RADIO, PANDORA or FAVORITES input is selected, the setting made here cannot be reflected.

1. Select ‘Parental Lock’ from the Network Option menu.
2. Input the password.
   Use \( \uparrow / \downarrow / \leftrightarrow / \rightarrow \rightarrow \leftrightarrow \) to set the position, and ENTER to confirm your selection.
3 Specify whether to turn Parental Lock on or off.
   • OFF – Internet services are not restricted.
   • ON – Internet services are restricted.

4 If you want to change the password, select Change Password.
   In this case, the procedure returns to step 2.

Play ZONE Setup
VSX-90 only
You can select what zone to play when playing via AirPlay and Bluetooth equipped devices as well as when playing audio content on equipment in the home network in DMR mode.
   • For playable DLNA-compatible network devices, see page 76.
1 Select ‘Play ZONE Setup’ from the Network Option menu.
2 Select the zone in which you want to play the audio contents.
3 When you’re finished, press RETURN.
   You will return to the Network Option menu.

Notes
   • If another zone is on, it may not be possible to play the audio contents. In this case, turn the other zone off, then play the audio contents.
   • MAIN/HDZONE at ZONE Setup must be set to HDZONE in order to use the HDZONE function (page 114).

Port Number Setting
VSX-90 only
On this receiver, there can be up to 5 numbers of ports where signals are received.
1 Select ‘Port Number Setting’ from the Network, Bluetooth menu.
2 Select the port number you want to change.
3 Input the port number.
   • Use ↑/↓ to select a character, ←/→ to set the position, and ENTER to confirm your selection.
   • It is not possible to set the same port number more than once.
4 If there are other port numbers you want to change, repeat steps 2 and 3.

Note
We recommend setting the port number to 00023 or within the range of 49152 to 65535.

Automatically conducting optimum sound tuning (Full Auto MCACC)
The Full Auto MCACC Setup measures the acoustic characteristics of your listening area, taking into account ambient noise, speaker connection and speaker size, and tests for both channel delay and channel level. When Measurement Type is Expert, in addition to this, Standing Wave, Reverb characteristics, Full Band Phase Control (VSX-90 only) and EQ are measured. After you have set up the microphone provided with your system, the receiver uses the information from a series of test tones to optimize the speaker settings and equalization for your particular room.

Important
   • Make sure the microphone and speakers are not moved during the Full Auto MCACC Setup.
   • Using the Full Auto MCACC Setup will overwrite any existing settings for the MCACC preset you select.
   • Before using the Full Auto MCACC Setup, the headphones should be disconnected.
   • With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable.
   • VSX-90 only: You can change where the screen is output in the MAIN/HDZONE (page 114) and HDMI output (page 92) settings.

CAUTION
   • The test tones used in the Full Auto MCACC Setup are output at high volume.
1 Press ◻ STANDBY/ON to switch on the receiver and your TV.
   Make sure that the TV’s video input is set to this receiver.
2 Connect the microphone to the MCACC SETUP MIC jack on the front panel.

Make sure there are no obstacles between the speakers and the microphone.
If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.
Install the microphone on a stable floor. Placing the microphone on any of the following surfaces may make accurate measurement impossible:
   • Sofas or other soft surfaces.
   • High places such as tabletops and sofa tops.
The Full Auto MCACC display appears once the microphone is connected.

Note
   • If you leave the GUI screen for over five minutes, the screen saver will appear.
3 Press MAIN RECEIVER to switch the remote control to the receiver operation mode.

4 Select the parameters you want to set.
When the speaker system is not 7.2ch/5.2ch/2.1ch (VSX-90)/5.2ch (VSX-45), set Speaker System before measuring full auto MCACC. For details, see Speaker system setting on page 110.
- Speaker System – Shows the current settings. When this is selected and ENTER is pressed, the speaker system selection screen appears. Select the proper speaker system, then press RETURN to return. If you are planning on bi-amping your front speakers, or setting up a separate speaker system in another room, read through Speaker system setting on page 110 and make sure to connect your speakers as necessary before continuing to step 4.
- EQ Type – When you select Expert for Measurement Type, set the correction method of the frequency characteristic of the viewing environment. Usually, set SYMMETRY. For details, see Automatic MCACC (Expert) on page 103.
- MCACC – The six MCACC presets are used for storing surround sound settings for different listening positions. Simply choose an unused preset for now (you can rename it later in Data Management on page 100).
- Dolby Enabled Speaker (VSX-90 only) – Select speakers that use Dolby Enabled Speaker (TM). When Dolby Enabled Speaker is not used, select NO (page 25).
- SP to ceiling (VSX-90 only) – When using the Dolby Enabled Speaker, you can input the vertical distance from the speaker to the ceiling (page 25).
- Measurement Type – When Basic is set, the minimum required measurement is performed in a short period of time. When Expert is set, accurate and precise measurement is performed so it will take some time.

5 Select ‘START’, then press ENTER.

6 Follow the instructions on-screen.
Make sure the microphone is connected, and if you’re using a subwoofer, make sure it is switched on and set to a comfortable volume level.

7 Wait for the test tones to finish, then confirm the speaker configuration in the GUI screen.
A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present. Again, try to be as quiet as possible while this is happening. It may take 3 to 10 minutes.

If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.

The configuration shown on-screen should reflect the actual speakers you have.
- If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.
- If Reverse Phase is displayed, the speaker wiring (+ and –) may be inverted. Check the speaker connections.
- If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly.
- After this, perform the Full Auto MCACC procedure again.
- If the connections were right, select GO NEXT and continue.

8 Make sure ‘OK’ is selected, then press ENTER.
A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings. The Full Auto MCACC Setup procedure is completed and the Home Menu menu reappears automatically.

With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable. If Full Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.

Problems when using the Auto MCACC Setup
If the room environment is not optimal for the Auto MCACC Setup (too much background noise, echo off the walls, obstacles blocking the speakers from the microphone) the final settings may be incorrect. Check for household appliances (air conditioner, fridge, fan, etc.), that may be affecting the environment and switch them off if necessary. If there are any instructions showing in the front panel display, please follow them.
- Some older TVs may interfere with the operation of the microphone. If this seems to be happening, switch off the TV when doing the Auto MCACC Setup.

The Input Setup menu
You only need to make settings in the Input Setup menu if you didn’t hook up your digital equipment according to the default settings (see Input function default and possible settings on page 62). In this case, you need to tell the receiver what equipment is hooked up to which terminal so the buttons on the remote control correspond to the components you’ve connected.
- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable.
- VSX-90 only: You can change where the screen is output in the MAIN/HDZONE (page 114) and HDMI output (page 95) settings.
Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

Select ‘System Setup’ from the HOME MENU.

Select ‘Input Setup’ from the System Setup menu.

Select the input function that you want to set up. The default names correspond with the names next to the terminals on the rear panel (such as DVD or SAT/CBL which, in turn, correspond with the names on the remote control).

Select the input(s) to which you’ve connected your component. For example, if your DVD player only has an optical output, you will need to change the DVD input function’s Audio In setting from COAXIAL (default) to the optical input you’ve connected it to.

When you’re finished, proceed to the settings for other inputs. There are optional settings in addition to the assignment of the input jacks:

- **Input Name** – You can choose to rename the input function for easier identification. Select Rename to do so, or Default to return to the system default.
- **Input Skip** – When set to ON, that input is skipped when selecting the input using ALL. (DVD and other inputs can be still be selected directly with the input function buttons.)
- **12V Trigger 1/2 (VSX-90)** – After connecting a component to the 12 volt trigger (see Switching components on and off using the 12 volt trigger on page 37), select MAIN, ZONE 2, HDZONE or OFF for the corresponding trigger setting to switch it on automatically along with the (main or sub) zone specified.
- **12V Trigger 1/2 (VSX-45)** – After connecting a component to the 12 volt trigger (see Switching components on and off using the 12 volt trigger on page 51), select MAIN or OFF for the corresponding trigger setting to switch it on automatically along with the (main or sub) zone specified.

When you’re finished, press RETURN. You will return to the System Setup menu.

### Input function default and possible settings

The terminals on the receiver generally correspond to the name of one of the input functions. If you have connected components to this receiver differently from (or in addition to) the defaults below, see The Input Setup menu on page 62 to tell the receiver how you’ve connected up. The dots (●) indicate possible assignments.

#### In case of VSX-90

### Changing the OSD display language (OSD Language)

The language used on the Graphical User Interface screen can be changed.
- The explanations in these operating instructions are for when English is selected for the GUI screen.
- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable.

VSX-90 only: You can change where the screen is output in the MAIN/HDZONE (page 114) and HDMI output (page 92) settings.

1. Press  STANDBY/ON to switch on the receiver and your TV.
2. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
4. Select ‘OSD Language’ from the System Setup menu.
5. Select the desired language.
6. Select ‘OK’ to change the language.

The setting is completed and the System Setup menu reappears automatically.
Basic playback

Playing a source .............................................................................................66
Playing an iPod .............................................................................................67
Playing a USB device .....................................................................................68
Playing an MHL-compatible device ..............................................................69
Listening to the radio .....................................................................................70
Music playback using Bluetooth wireless technology ..................................71
Basic playback

Playing a source
Here are the basic instructions for playing a source (such as a DVD disc) with your home theater system.

VSX-90

1 Switch on your system components and receiver.
Start by switching on the playback component (for example a DVD player), your TV and subwoofer (if you have one), then the receiver (press STANDBY/ON).
Make sure that the TV’s video input is set to this receiver.

2 Select the input function you want to play.
You can use the input function buttons on the remote control or the front panel INPUT SELECTOR dial.
• As necessary, select the type of audio input signal (page 76).

3 Press AUTO (AUTO SURR/ALC/STREAM DIRECT) to select ‘AUTO SURROUND’ and start playback of the source.
For such sound sources as Dolby TrueHD and DTS-HD, the surround sound is played. With stereo sound, the sound is played from the left and right front speakers with the default listening mode.
To play a stereo sound source in multichannel, press SURR or ADV to select your favorite listening mode.
(Example: Press SURR several times to select EXT.STEREO.)
• You may need to check the digital audio output settings on your DVD player or digital satellite receiver. It should be set to output Dolby Digital, DTS and 88.2 kHz / 96 kHz PCM (2 channel) audio, and if there is an MPEG audio option, set this to convert the MPEG audio to PCM.
• See also Listening to your system on page 73 for information on different ways of listening to sources.
It is possible to check on the front panel display whether or not multi-channel playback is being performed properly. For details, see Auto Surround, ALC and Stream Direct with different input signal formats on page 131.
When multi-channel speakers (more than the two front left and right channels) are connected, straight decoding is performed, so the input signal’s format name (for example, TrueHD, DTS-HD MSTR or DTS-HD HI RES) is displayed.
If the display does not correspond to the input signal and listening mode, check the connections and settings.

4 Use the VOLUME +/- to adjust the volume level.
Turn down the volume of your TV so that all sound is coming from the speakers connected to this receiver.

Note
Depending on the input to be played, the playback operation can in some cases be performed using the on-screen display.
With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable.
VSX-90 only: You can change where the screen is output in the MAIN/HDZONE (page 114) and HDMI output (page 92) settings.

Turning off the sound
Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).
• Press MUTE.

Playing a source with HDMI connection

• Use ALL to select the input function connected to the receiver’s HDMI input terminals.
You can also perform the same operation by using the INPUT SELECTOR dial on the front panel or by pressing HDMI on the remote control repeatedly.
• Set the HDMI parameter in Setting the Audio options on page 89 to THROUGH if you want to hear HDMI audio output from your TV (no sound will be heard from this receiver).
• If the video signal does not appear on your TV, try adjusting the resolution settings on your component or display. Note that some components (such as video game units) have resolutions that may not be converted. In this case, use an analog video connection.
Playing an iPod

This receiver has the iPod/iPhone terminal that will allow you to control playback of audio content from your iPod using the controls of this receiver. Here we describe the procedure for playback on an iPod. For playback on a USB device, see Playing a USB device on page 68.

Important
- USB works with iPhone 6 Plus, iPhone 6, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPod touch (4th through 5th generation) and iPod nano (4th through 7th generation).
- However, some of the functions may be restricted for some models.
- This receiver has been developed and tested for the software version of iPod/iPhone indicated on the website of Pioneer.
  http://pioneer.jp/homeav/support/ios/na/
- Installing software versions other than indicated on the website of Pioneer to your iPod/iPhone may result in incompatibility with this receiver.
- iPod and iPhone are licensed for reproduction of non-copyrighted materials or materials the user is legally permitted to reproduce.
- Features such as the equalizer cannot be controlled using this receiver, and we recommend switching the equalizer off before connecting.
- Pioneer cannot under any circumstances accept responsibility for any direct or indirect loss arising from any inconvenience or loss of recorded material resulting from the iPod failure.
- VSX-90 only: When listening to a track on the iPod in the main zone, it is possible to control the sub zone, but not to listen to a different track in the sub zone from the one playing in the main zone.

1 Press STANDBY/ON to switch on the receiver and your TV.
   For iPod or iPhone connections, refer to page 36 (VSX-90) or page 49 (VSX-45).
   About one minute is required between turning the power on and completion of startup.
   - It is also possible to operate the iPod on the iPod itself, without using the TV screen. For details, see Switching the iPod controls on page 67.

2 Press iPod USB on the remote control to switch the receiver to the iPod/USB.
   When the display shows the names of folders and files, you’re ready to play music from the iPod.

Playing back audio files stored on an iPod
To navigate songs on your iPod, you can take advantage of the GUI screen of your TV connected to this receiver. You can also control all operations for music in the front panel display of this receiver.
- Note that characters that cannot be displayed on this receiver are displayed as #.
- This feature is not available for photos on your iPod.

Finding what you want to play
When your iPod is connected to this receiver, you can browse songs stored on your iPod by playlist, artist name, album name, song name, genre or composer, similar to using your iPod directly.

1 Use i/j to select a category, then press ENTER to browse that category.
   - When ►► or ► is pressed at the list screen, the page switches.
   - To return to the previous level any time, press RETURN.

2 Use i/j to browse the selected category (e.g., albums).
   - Use ►►► to move to previous/next levels.

3 Continue browsing until you arrive at what you want to play, then press ► to start playback.
   - On the playback screen, pressing RETURN displays a list screen. To return to the playback screen, press DISP.

Basic playback controls
This receiver’s remote control buttons can be used for basic playback of files stored on an iPod.

VSX-90

Switching the iPod controls
You can switch over the iPod controls between the iPod and the receiver.

1 Press HOME MENU to switch the iPod controls.
   This enables operation and display on your iPod, and this receiver’s remote control and GUI screen become inactive.

2 Press HOME MENU again to switch back to the receiver controls.

Note
Change the receiver’s input to the iPod in one action by pressing the iPod iPhone DIRECT CONTROL button on the front panel to enable iPod operations on the iPod.
Playing a USB device

It is possible to play files using the USB interface on the front of this receiver.

- Compatible USB devices include external magnetic hard drives, portable flash memory drives (particularly key drives) and digital audio players (MP3 players) of format FAT16/32.
- Pioneer cannot guarantee compatibility (operation and/or bus power) with all USB mass storage devices and assumes no responsibility for any loss of data that may occur when connected to this receiver.

1. **Press** STANDBY/ON to switch on the receiver and your TV.
   - For connection of USB memory, refer to page 36 (VSX-90) or page 49 (VSX-45).
   - About one minute is required between turning the power on and completion of startup.
   - Make sure the receiver is in standby when disconnecting the USB device.

2. **Press iPod USB on the remote control to switch the receiver to the iPod/USB.**
   - When the display shows the names of folders and files, you’re ready to play from the USB device.

   **Note**
   - If an Over Current message lights in the display, the power requirements of the USB device are too high for this receiver. Try following the points below:
     - Switch the receiver off, then on again.
     - Reconnect the USB device with the receiver switched off.
     - Use a dedicated AC adapter (supplied with the device) for USB power.
   - If this doesn’t remedy the problem, it is likely your USB device is incompatible.

Playing back audio files stored on a USB memory device

The maximum number of levels that you can select in Step 2 (below) is 9.

- Note that non-Roman characters in the playlist are displayed as #.

1. **Use ‹ / › to select a folder, then press ENTER to browse that folder.**
   - To return to the previous level any time, press RETURN.

2. **Continue browsing until you arrive at what you want to play, then press ‹ to start playback.**
   - Copyrighted audio files cannot be played back on this receiver.
   - DRM-protected audio files cannot be played back on this receiver.
   - On the playback screen, pressing RETURN displays a list screen. To return to the playback screen, press DISP.

Basic playback controls

This receiver’s remote control buttons can be used for basic playback of files stored on USB memory devices.

- Press iPod USB to switch the remote control to the iPod/USB operation mode.

### VSX-90

### VSX-45

Playing back photo files stored on a USB memory device

- Photo files cannot be played in the sub zone.

1. **Use ‹ / › to select a folder, then press ENTER to browse that folder.**
   - For high resolution files, some time may be required for the photo to appear.
   - To return to the previous level any time, press RETURN.

2. **Continue browsing until you arrive at what you want to play, then press ENTER to start playback.**
   - The selected content is displayed in full screen and a slideshow starts.

Basic playback controls

<table>
<thead>
<tr>
<th>Button(s)</th>

</thead>
<tbody>
<tr>
<td>ENTER ‹</td>
<td>Starts displaying a photo and playing a slideshow.</td>
</tr>
<tr>
<td></td>
<td>Stops the player and returns to the previous menu.</td>
</tr>
</tbody>
</table>

**Tip**

Slide shows of photo files can be played while listening to music files by returning to the folder/file list display while playing a music file on a USB device and then playing the photo files. At that time, select music files with a sampling frequency of 48 kHz or less.
Basic playback

About playable file formats
The USB function of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats.

- For MP3, WAV, AAC, FLAC, AIFF, Apple Lossless, and DSD files, gapless play will be performed when a music file with identical format, sampling frequency, number of quantization bits, and number of channels is continuously played.
- When AAC or MP3 format is used, sound is reproduced with the minimum gap. If you are conscious about gaps, use WAV or FLAC files.

Playing an MHL-compatible device

MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats. The MHL-compatible device’s video signals are output from the TV connected to the receiver, the audio signals are output from the speakers connected to the receiver or TV.

1. Press STANDBY/ON to switch on the receiver and your TV.
2. For connection of MHL standard-compatible equipment, refer to page 36 (VSX-90) or page 50 (VSX-45).
3. Press MHL on the remote control to switch the receiver to the MHL.
4. Select and play the desired contents on the MHL-compatible device.

Notes

- MHL-compatible devices can be operated with the receiver’s remote control by pressing the remote control’s MHL button, but depending on the MHL-compatible device being used, some buttons may not be operable.
- To playback from a MHL-compatible device connected to the receiver on a TV that is also connected to the receiver, the power to the receiver must be turned on.
Listening to the radio

The following steps show you how to tune in to FM and AM radio broadcasts using the automatic (search) and manual (step) tuning functions. If you already know the frequency of the station you want, see Tuning directly to a station below. Once you are tuned to a station you can memorize the frequency for recall later—see Saving station presets on page 70 for more on how to do this.

1. Press TUNER to select the tuner.
2. Use BAND to change the band (FM or AM), if necessary.
3. Tune to a station.
   - There are three ways to do this:
     - **Automatic tuning**—To search for stations in the currently selected band, press and hold **TUNE +/−** for about a second. The receiver will start searching for the next station, stopping when it has found one. Repeat to search for other stations.
     - **Manual tuning**—To change the frequency one step at a time, press **TUNE +/−**.
     - **High speed tuning**—Press and hold **TUNE +/−** for high speed tuning. Release the button at the frequency you want.

Improving FM sound

VSX-90 only

If the TUNED or STEREO indicator doesn’t light when tuning to an FM station because the signal is weak, press MPX to switch the receiver into mono reception mode. This should improve the sound quality and allow you to enjoy the broadcast.

Tuning directly to a station

1. Press TUNER to select the tuner.
2. Use BAND to change the band (FM or AM), if necessary.
4. Use the number buttons to enter the frequency of the radio station.
   - For example, to tune to 106.00 (FM), press 1, 0, 6, 0, 0.
   - If you make a mistake halfway through, press D.ACCESS twice to cancel the frequency and start over.

Saving station presets

If you often listen to a particular radio station, it’s convenient to have the receiver store the frequency for easy recall whenever you want to listen to that station. This saves the effort of manually tuning in each time. This receiver can memorize up to 85 stations, stored in seven banks, or classes (A to G) of 9 stations each.

1. Tune to a station you want to memorize.
   - See Listening to the radio on page 70 for more on this.
2. Press TOOLS (TUNER EDIT).
   - The display shows PRESET MEMORY, then a blinking memory class.
3. Press CLASS to select one of the seven classes, then press PRESET +/− to select the station preset you want.
   - You can also use the number buttons to select a station preset.
4. Press ENTER.
   - After pressing ENTER, the preset class and number stop blinking and the receiver stores the station.

Listening to station presets

1. Press TUNER to select the tuner.
2. Press CLASS to select the class in which the station is stored.
   - Press repeatedly to cycle through classes A to G.
3. Press PRESET +/− to select the station preset you want.
   - You can also use the number buttons on the remote control to recall the station preset.

Naming station presets

For easier identification, you can name your station presets.

1. Choose the station preset you want to name.
   - See Listening to station presets on page 70 for how to do this.
2. Press TOOLS (TUNER EDIT).
   - The display shows PRESET NAME, then a blinking cursor at the first character position.
3. Input the name you want.
   - Use **I/J** (or **TUNE I/J** of front panel) to select a character, **K/L** (or **PRESET K/L** of front panel) to set the position, and **ENTER** to confirm your selection.

Notes

- To erase a station name, simply repeat steps 1 to 3 and input eight spaces instead of a name.
- Once you have named a station preset, you can press DISP when listening to a station to switch the display between name and frequency.
### Music playback using Bluetooth wireless technology

The unit is capable of playing back music stored on Bluetooth capable devices (cell phones, digital music players etc.) wirelessly. You can also use a Bluetooth audio transmitter (sold separately) to enjoy music from devices that do not have Bluetooth functionality. Please refer to the user’s manual for your Bluetooth capable device for more details.

#### Notes
- The Bluetooth wireless technology enabled device must support A2DP profiles.
- Pioneer does not guarantee proper connection and operation of this unit with all wireless technology enabled devices.

### Remote control operation

The remote control supplied with this unit allows you to play and stop media, and perform other operations.

#### Notes
- The Bluetooth wireless technology enabled device must support AVRCP profiles.
- Remote control operations cannot be guaranteed for all Bluetooth wireless technology enabled devices.

### Pairing with the unit (Initial registration)

In order for the unit to playback music stored on a Bluetooth capable device, pairing must first be performed. Pairing should be performed when first using the unit with the Bluetooth capable device, or when the pairing data on the device has been erased for any reason. Pairing is a step required to allow communication using Bluetooth wireless technology to be carried out.

- Pairing is performed the first time that you use the unit and the Bluetooth capable device together.
- In order to allow communication using Bluetooth wireless technology to take place, pairing must be performed on both the unit and the Bluetooth capable device.
- After pressing the BT and switching to BT AUDIO input, perform the pairing procedure on the Bluetooth capable device. If pairing has been performed correctly, you will not need to perform the pairing procedures for the unit as shown below.

Please refer to the user’s manual for your Bluetooth capable device for more details.

1. **Press BT and after choosing the input for BT AUDIO, perform operations 2 and 3 within 5 minutes.**
2. **Turn on the power to the Bluetooth capable device that you wish to pair with, and perform pairing procedure on it.**

Pairing will start:
- Place the Bluetooth capable device close to the unit.
- Please refer to the user’s manual for your Bluetooth capable device for details on when pairing can be performed and the procedures required for pairing.
- The name of this receiver indicated on the equipment that has the Bluetooth functionality is “VSX-90 XXXXXX (equipment unique symbol)” or “VSX-45 XXXXXX (equipment unique symbol).”
3. **Confirm on the Bluetooth capable device that pairing has been completed.**

If pairing with the Bluetooth capable device has been completed correctly, CONNECTED will be displayed on the front panel of the unit.
Listen to music on the unit from a Bluetooth capable device

1. A Bluetooth connection will be created between the Bluetooth capable device and the unit.

   Procedures for connecting to the unit should be performed from the Bluetooth capable device.
   • Please refer to the user’s manual for your Bluetooth capable device for details of the connection procedures.

2. Playback music from the Bluetooth capable device.

   This receiver’s remote control buttons can be used for basic playback of files stored on Bluetooth wireless technology devices.
   • When the Network Standby and Bluetooth Setup for Network, Bluetooth settings are set as ON, the main power of this receiver will automatically be on by playing the equipment using the Bluetooth function.
   • When play is started on the equipment with the Bluetooth function, the zone input set at Play ZONE Setup will automatically switch to BT AUDIO.
   • Depending on the Bluetooth wireless technology device you use, operation may differ from what is shown in the remote control buttons.

3. While listening to a source, set the remote control to the receiver operation mode, then press ADV repeatedly to select SOUND RETRIEVER AIR.

   Notes
   • With this receiver, when an iPod is connected or disconnected while the music of a Bluetooth wireless technology device is playing, the connection with the Bluetooth wireless technology device may be canceled.
   • The SOUND RETRIEVER AIR listening mode can only be selected when the BT AUDIO input.

Radio wave caution

This unit uses a 2.4 GHz radio wave frequency, which is a band used by other wireless systems (see list below). To prevent noise or interrupted communication, do not use this unit nearby such devices, or make sure these devices are switched off during use.

- Cordless phones
- Cordless facsimiles
- Microwave ovens
- Wireless LAN devices (IEEE802.11b/g)
- Wireless AV equipment
- Wireless controllers for game systems
- Microwave-based health aids
- Some baby monitors

Other, less common, equipment that may operate on the same frequency:
- Anti-theft systems
- Amateur radio stations (HAM)
- Warehouse logistic management systems
- Discrimination systems for train or emergency vehicles

Notes

- In the event noise appears in your television image, there is the possibility that a Bluetooth wireless technology enabled device or this unit (including products supported by this unit) are causing signal interference with the antenna input connector of your television, video, satellite tuner, etc. In this event, increase the distance between the antenna input connector and the Bluetooth wireless technology enabled device or this unit (including products supported by this unit).
- If there is something obstructing the path between this unit (including devices supported by this unit) and the device equipped with Bluetooth wireless technology (such as a metal door, concrete wall, or insulation containing tinfoil), you may need to change the location of your system to prevent signal noise and interruptions.

Scope of operation

Use of this unit is limited to home use. (Transmission distances may be reduced depending on communication environment).

In the following locations, poor condition or inability to receive radio waves may cause the audio to be interrupted or stopped:
- In reinforced concrete buildings or steel framed or iron-framed buildings.
- Near large metallic furniture.
- In a crowd of people or near a building or obstacle.
- In a location exposed to the magnetic field, static electricity or radio wave interference from radio communication equipment using the same frequency band (2.4 GHz) as this unit, such as a 2.4 GHz wireless LAN device (IEEE802.11b/g) or microwave oven.
- If you live in a heavily populated residential area (apartment, townhouse, etc.) and if your neighbor’s microwave is placed near your system, you may experience radio wave interference. If this occurs, move your unit to a different place. When the microwave is not in use, there will be no radio wave interference.

Radio wave reflections

The radio waves received by this unit include the radio wave coming directly from the device equipped with Bluetooth wireless technology (direct wave) and waves coming from various directions due to reflections by walls, furniture and building (reflected waves). The reflected waves (due to obstacles and reflecting objects) further produce a variety of reflected waves as well as variation in reception condition depending on locations. If the audio cannot be received properly due to this phenomenon, try moving the location of the device equipped with Bluetooth wireless technology a little. Also note that audio may be interrupted due to the reflected waves when a person crosses or approaches the space between this unit and the device equipped with Bluetooth wireless technology.

Precautions regarding connections to products supported by this unit

- Complete connections for all devices supported by this unit, including all audio cords and power cables before connecting them to this unit.
- After completing connections to this unit, check the audio and power cables to confirm that they not twisted together.
- When disconnecting this unit, confirm that you have sufficient working space in the surrounding area.
- When changing connections of audio or other cables for products supported by this unit, confirm that you have sufficient working space in the surrounding area.

Enjoying various types of playback using the listening modes

Using this receiver, you can listen to any source in surround sound. However, the options available will depend on your speaker setup and the type of source you’re listening to.

To play with surround sound, check “Standard surround sound” or “Using the Advanced surround effects” below and select the desired mode.

To play with the optimum mode for the input signal, see “Auto playback” or “Using Stream Direct”. (The sound is played in stereo when 2-channel signals are input, in surround when multi-channel signals are input.)

Important

- The listening modes and many features described in this section may not be available depending on the current source, settings and status of the receiver.

Auto playback

There are many ways to listen back to sources using this receiver, but the simplest, most direct listening option is the Auto Surround feature. The receiver automatically detects what kind of source you’re playing and selects multichannel or stereo playback as necessary.

- While listening to a source, press AUTO (AUTO SURR/ALC/STREAM DIRECT) for auto playback of a source.

Auto SURROUND shows briefly in the display before showing the decoding or playback format. Check the digital format indicators in the front panel display to see how the source is being processed.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.

- When listening to the BT AUDIO input, the SOUND RETRIEVER AIR feature is selected automatically.

ALC – In the Auto level control (ALC) mode, this receiver equalizes playback sound levels. Also, the low and high frequency sounds, dialogs, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.

Note

When ALC is selected, the effect level can be adjusted using the EFFECT parameter in Setting the Audio options on page 89.

Standard surround sound

The following modes provide basic surround sound for stereo and multichannel sources.

In case of VSX-90

- While listening to a source, press Surr (STANDARD SURROUND).

If necessary, press repeatedly to select a listening mode.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.

With two channel sources, you can select from:

- EXT.STEREO – Gives multichannel sound to a stereo source, using all of your speakers.
- Dolby Surround – Dolby Surround is played with a maximum of 7.1 ch including top-middle and surround back using up-mix technology that can expand sound to speakers arranged in three-dimensions, in lieu of the conventional Pro Logic II, Pro Logic IIX, and Pro Logic IIZ.
- Neo:6 CINEMA – Up to 7.1 channel sound (surround back or front wide), especially suited to movie sources.
- Neo:6 MUSIC – Up to 7.1 channel sound (surround back or front wide), especially suited to music sources.
- STEREO – The audio is heard with your sound settings and you can still use the audio options.

With multichannel sources, if you have connected surround back, top middle, front wide speakers, you can select (according to format):

- EXT.STEREO – See above
- Dolby Surround – See above
- STEREO – See above
- DTS Neo:6 – Allows you to hear 6.1 channel playback with DTS encoded sources
- DTS-ES Matrix or DTS-ES Discrete – Allows you to hear 6.1 channel playback with DTS-ES encoded sources
- Straight Decode – Plays back without the effects above.

Notes

- When listening to 2-channel sources in Neo:6 Cinema or Neo:6 Music mode, you can also adjust the center image effect (see Setting the Audio options on page 89).
- When listening through headphones, you can select STEREO mode only.
- When Dolby Surround is selected, C.SPREAD can be adjusted (page 89).
- When Dolby Surround is selected, audio is not output from the front wide speaker and surround back speaker when it is the only one connected (set).
- When Neo:6 CINEMA or Neo:6 MUSIC is selected, audio is not output from the top middle speaker.

In case of VSX-45

- While listening to a source, press Surr (STANDARD SURROUND).

If necessary, press repeatedly to select a listening mode.

- If the source is Dolby Digital, DTS, or Dolby Surround encoded, the proper decoding format will automatically be selected and shows in the display.

With two channel sources, you can select from:

- EXT.STEREO – Gives multichannel sound to a stereo source, using all of your speakers.
- Pro Logic II MOVIE – Up to 5.1 channel sound, especially suited to movie sources.
- Pro Logic II MUSIC – Up to 5.1 channel sound, especially suited to music sources.
- Pro Logic II GAME – Up to 5.1 channel sound, especially suited to video games.
- PRO LOGIC – 4.1 channel surround sound (sound from the surround speakers is mono).
- Neo:6 CINEMA – Up to 5.1 channel sound, especially suited to movie sources.
- Neo:6 MUSIC – Up to 5.1 channel sound, especially suited to music sources.
- STEREO – The audio is heard with your sound settings and you can still use the audio options.

With multichannel sources, if you have connected surround speakers, you can select (according to format):

- EXT.STEREO – See above.
- DTS-ES Matrix or DTS-ES Discrete – Allows you to hear 5.1 channel playback with DTS-ES encoded sources.
- DTS Neo:6 – Allows you to hear 5.1 channel playback with DTS encoded sources.
- Neo:6 – Allows you to hear 5.1 channel playback.
- STEREO – See above.
- Straight Decode – Plays back without the effects above.

Notes

- When listening to 2-channel sources in Dolby Pro Logic II Music mode, there are three further parameters you can adjust: C.WIDTH, DIMENSION, and PANORAMA. See Setting the Audio options on page 89 to adjust them.
- When listening to 2-channel sources in Neo:6 Cinema or Neo:6 Music mode, you can also adjust the center image effect (see Setting the Audio options on page 89).
- When listening through headphones, you can select STEREO mode only.
Using the Advanced surround effects

The Advanced surround effects can be used for a variety of additional surround sound effects. Most Advanced Surround modes are designed to be used with film soundtracks, but some modes are also suited for music sources. Try different settings with various soundtracks to see which you like.

- **Press ADV (ADVANCED SURROUND) repeatedly to select a listening mode.**
  - **ACTION** – Designed for action movies with dynamic soundtracks
  - **DRAMA** – Designed for movies with lots of dialog
  - **ADVANCED GAME** – Suitable for video games
  - **SPORTS** – Suitable for sports programs
  - **CLASSICAL** – Gives a large concert hall–type sound
  - **ROCK/POP** – Creates a live concert sound for rock and/or pop music
  - **F.S.SURROUND** – Use to provide a rich surround sound effect directed to the center of where the front left and right speakers sound projection area converges.

- **SOUND RETRIEVER AIR** – Suitable for listening to the sound from a Bluetooth wireless technology device. The SOUND RETRIEVER AIR listening mode can only be selected when the BT AUDIO input.
- **PHONES SURR** – When listening through headphones, you can still get the effect of overall surround.
- **ECO MODE 1** – Select this to play music that has a high audio level with a lower power consumption than usual.
- **ECO MODE 2** – Select this to play movies, etc., with a high ratio of low volume scenes and high volume scenes (a large dynamic ratio) with a lower power consumption than usual. This mode provides greater power savings than ECO MODE 1.

**Notes**
- The Front Stage Surround Advance (F.S.SURROUND) function allows you to create natural surround sound effects using just the front speakers and the subwoofer.
- When **ECO MODE 1** or **ECO MODE 2** is selected, the front panel’s display lights with the dimmest brightness.
- Since **ECO MODE 1** and **ECO MODE 2** reduce the power consumption, the speakers are switched in function of the number of input channels. Because of this, a speaker switching sound (clicking sound) may be produced when the number of input channels is switched. If this bothers you, switch to a different listening mode.
- When using headphones, **SOUND RETRIEVER AIR** (only with the BT AUDIO input), **PHONES SURR**, **ECO MODE 1** and **ECO MODE 2** can be selected.

**Using Stream Direct**

Use the Stream Direct modes when you want to hear the truest possible reproduction of a source. All unnecessary signal processing is bypassed, and you’re left with the pure analog or digital sound source. Processing depends on the input signal and whether or not surround back speakers are connected. For details, see “Auto Surround, ALC and Stream Direct with different input signal formats” on page 131.

- While listening to a source, press **AUTO** (AUTO SURR/ALC/STREAM DIRECT) to select the mode you want.
  Check the digital format indicators in the front panel display to see how the source is being processed.

- **AUTO SURROUND** – See Auto playback on page 74.
- **ALC** – Listening in auto level control mode (page 74).
  — When **ALC** is selected, the effect level can be adjusted using the **EFFECT** parameter in Setting the Audio options on page 89.
- **DIRECT** – Plays back sound from the source with the least modification next to **PURE DIRECT**. With **DIRECT**, the only modifications added to **PURE DIRECT** playback are calibration of the sound field by the MCACC system and the Phase Control effect.
- **PURE DIRECT** – Plays back unmodified sound from source with only minimal digital treatment.

**Note**

When listening through headphones, you can select **ALC** or **PURE DIRECT** mode only.

**About Dolby Atmos**

VSX-90 only

This AV receiver supports the latest Dolby Atmos surround sound system. Dolby Atmos is a new technology in which, through real time calculation of audio data and metadata (position and time information) included in the audio signal, a surround sound space is achieved irrespective of the speaker layout and number of speakers. Dolby Atmos contents are required to enjoy Dolby Atmos. For Blu-ray discs with Dolby Atmos, Dolby Atmos can be played by connecting most conventional Blu-ray discs with this receiver using HDMI.

In addition, the following connection and settings are necessary to play Dolby Atmos.
- Any one of top-middle, surround back, or front-wide must be selected.
- The listening mode of any one of **AUTO SURROUND**, **DIRECT**, **PURE DIRECT** must be selected.
- **Settings for RENDER must be OBJECT** (page 89). For details on Dolby Atmos, see page 154.

**Note**

When playing back Dolby Atmos content, the program format indicator does not light (page 15). ‘Dolby Atmos’ is displayed in the display of this receiver.
Selecting MCACC presets

- Default setting: MEMORY 1

If you have calibrated your system for different listening positions, you can switch between settings to suit the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.

2. Use $/$ to select ‘MCACC’.

   An indicator such as $ M1. MEMORY 1 $ is displayed in the front panel display.

3. Use $/$ to select the setting.

   Press repeatedly to select one of the six MCACC presets. See Data Management on page 108 to check and manage your current settings.

   - These settings have no effect when headphones are connected.
   - You can also press $/$ to select the MCACC preset.

Choosing the input signal

On this receiver, it is possible to switch the input signals for the different inputs as described below.

- This receiver can only play back Dolby Digital, PCM (32 kHz to 192 kHz) and DTS (including DTS 96/24) digital signal formats. The compatible signals via the HDMI terminals are: Dolby Digital, DTS, PCM (32 kHz to 192 kHz), Dolby TrueHD, Dolby Digital Plus, DTS-EXPRESS, DTS-HD Master Audio and SACD.

- You may get digital noise when an LD, CD, DVD or BD player compatible with DTS is playing an analog signal.

- Some DVD players don’t output DTS signals. For more details, refer to the instruction manual supplied with your DVD player.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.

2. Use $/$ to select ‘SIGSEL’.

3. Use $/$ to select the input signal corresponding to the source component.

   Each press cycles through the options as follows:

   - AUTO – The receiver selects the first available signal in the following order: HDMI, DIGITAL, ANALOG.
   - ANALOG – Selects an analog signal.
   - DIGITAL – Select an optical or coaxial digital input signal. ‘DIGITAL’ is displayed in the front panel display.
   - HDMI – Selects an HDMI signal.
     - When the HDMI audio output parameter is set to THROUGH, the signal will be heard through your TV, not from this receiver.

When set to DIGITAL, HDMI or AUTO (only selected DIGITAL or HDMI), the indicators light according to the signal being decoded (see Display on page 18).

Better sound using Phase Control

This receiver’s Phase Control feature uses phase correction measures to make sure your sound source arrives at the listening position in phase, preventing unwanted distortion and/or coloring of the sound. Phase Control technology provides coherent sound reproduction through the use of phase matching for an optimal sound image. The default setting is on and we recommend leaving Phase Control switched on for all sound sources.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.

2. Use $/$ to select ‘PHASE’.

3. Use $/$ to switch on phase correction.

   The PHASE CONTROL indicator on the front panel lights.

Notes

- Phase matching is a very important factor in achieving proper sound reproduction. If two waveforms are ‘in phase’, they crest and trough together, resulting in increased amplitude, clarity and presence of the sound signal. If a crest of a wave meets a trough, then the sound will be ‘out of phase’ and an unreliable sound image will be produced.

- For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. Phase Control Plus function corrects for phase shifting on such discs. For instructions on setting the Phase Control Plus, see Setting the Audio options on page 89.

- If your subwoofer has a phase control switch, set it to the plus (+) sign (or 0°). However, the effect you can actually feel when PHASE CONTROL is set to ON on this receiver depends on the type of your subwoofer. Set your subwoofer to maximize the effect. It is also recommended you try changing the orientation or the place of your subwoofer.

- Set the built-in lowpass filter switch of your subwoofer to off. If this cannot be done on your subwoofer, set the cutoff frequency to a higher value.

- If the speaker distance is not properly set, you may not have a maximized PHASE CONTROL effect.

- The PHASE CONTROL mode cannot be set to ON in the following cases:
  - When headphones are plugged in.
  - When the PURE DIRECT mode is switched on.
  - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 89.
Listening to your system

### Better sound using Phase Control and Full Band Phase Control

VSX-90 only

This receiver is equipped with the two types of functions that correct phase distortion and group delay: Phase Control and Full Band Phase Control. Activating Full Band Phase Control is strongly recommended because it also involves the effects of Phase Control.

The Full Band Phase Control feature calibrates the frequency-phase characteristics of the speakers connected. Standard speakers designed exclusively for audio use generally reproduce sound with the divided frequency bands output from a speaker system consisting of multiple speakers (in case of typical 3-way speakers, for instance, the tweeter, the squawker (midrange), and the woofer output sound in the high-, middle-, and low-frequency ranges, respectively). Though these speakers are designed to flatten the frequency-amplitude characteristics across wide ranges, there are cases where the group delay characteristics are not effectively flattened. This phase distortion of the speakers subsequently causes group delay (the delay of low-frequency sound against high-frequency sound) during audio signal playback.

This receiver analyzes the frequency-phase characteristics of the speakers by measuring test signals output from the speakers with the supplied microphone, therefore flattening the analyzed frequency-phase characteristics during audio signal playback - the same correction is made for a pair of left and right speakers. This correction minimizes group delay between the ranges of a speaker and improves the frequency-phase characteristics across all ranges.

Furthermore, the enhanced frequency-phase characteristics between channels ensure better surround sound integration for multichannel setting.

- Upon shipment from the factory, the Phase Control function is in on status. If you perform Full Auto MCACC (page 61) or Full Band Phase Ctrl of Auto MCACC (page 103), the Full Band Phase Control function is automatically turned on after measurement. By turning Full Band Phase Control on, the Phase Control function is turned on as well. Therefore, we recommend that usually the function be used with Full Band Phase Control on.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.
2. Use ‹ or › to select ‘PHASE’.
3. Use ‹/› to select ‘FULLBND’.

Both the Phase Control and Full Band Phase Control functions are switched on. The FULL BAND and ⦿ indicator, on the front panel lights.

### Notes

- The original characteristics of group delay of the speakers calibrated and the targeted characteristics after correction can be displayed graphically in the GUI screen (see Checking MCACC Data on page 107). Also, by transferring the measurement data to the computer using the CD-ROM, the original characteristics of group delay of the speakers calibrated and the corrected characteristics of group delay can be displayed in 3-dimension on your PC. For details, refer to the operating instructions for the MCACC PRO PC Display Application Software included on the CD-ROM.
- Depending on the input signal and listening mode, it may not be possible to set the Full Band Phase Ctrl mode to ON.
- The Full Band Phase Ctrl mode cannot be set to ON in the following cases:
  - When headphones are plugged in.
  - When the PURE DIRECT mode is switched on.
  - When the HDMI audio output parameter is set to THROUGH in Setting the Audio options on page 89.
- The Full Band Phase Control function does not work for Dolby Enabled Speakers since they are full-range speakers.
Playback with NETWORK features

Introduction ...................................................................................................................................79
Playback with Network functions ................................................................................................80
About network playback ..............................................................................................................82
About playable file formats ..........................................................................................................84
Introduction

This receiver is equipped with the LAN terminal and you can enjoy the following features by connecting your components to these terminals.

Listening to Internet radio stations

You can select and listen to your favorite Internet radio station from the list of Internet radio stations created, edited, and managed by the vTuner database service exclusively for use with the Pioneer products.

See "Playback with Network functions" on page 80 and "Listening to Internet radio stations" on page 81.

Playback the music files stored in PCs

You can playback a lot of musics stored in your PCs using this unit.

- Besides a PC, you can also play back audio files stored on your other components with the built-in media server function based on DLNA 1.0 or DLNA 1.5 framework and protocols (i.e. network-capable hard disks and audio systems).

See "Playback with Network functions" on page 80 and "Playing back audio files stored on components on the network" on page 82.

Listening to Pandora Internet Radio

See "Listening to Pandora Internet Radio" on page 81.

Listening to Spotify audio streaming playback

See "About the Spotify audio stream playback function" on page 80.

Notes

- To listen to Internet radio stations, you must sign a contract with an ISP (Internet Service Provider) beforehand.
- Photo or video files cannot be played back.
- With Windows Media Player 11 or Windows Media Player 12, DRM-protected audio files cannot be played back on this receiver.

About playable DLNA network devices

This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:

- PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)
- DLNA-compatible digital media servers (on PCs or other components)
- Digital Media Controller (DMC). Devices controlled by this DMC to play files are called DMRs (Digital Media Renderers). This receiver supports this DMR function. When in the DMR mode, such operations as playing and stopping files can be performed from the external controller. Volume adjustment and the muting control are also possible. The DMR mode is canceled if the remote control unit is operated while in the DMR mode (aside from certain buttons, including the VOLUME +/-, MUTE and DISP).
- Depending on the external controller being used, playback may be interrupted when the volume is adjusted from the controller. In this case, adjust the volume from the receiver or remote control.

About playable DLNA network devices

This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:

- PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)
- Digital Media Controller (DMC). Devices controlled by this DMC to play files are called DMRs (Digital Media Renderers). This receiver supports this DMR function. When in the DMR mode, such operations as playing and stopping files can be performed from the external controller. Volume adjustment and the muting control are also possible. The DMR mode is canceled if the remote control unit is operated while in the DMR mode (aside from certain buttons, including the VOLUME +/-, MUTE and DISP).
- Depending on the external controller being used, playback may be interrupted when the volume is adjusted from the controller. In this case, adjust the volume from the receiver or remote control.

Using AirPlay on iPod touch, iPhone, iPad, and iTunes

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

To use AirPlay, select your receiver on your iPod touch, iPhone, iPad or in iTunes.  The receiver’s input will switch automatically to AirPlay when AirPlay is in use.  The following operations can be performed when in AirPlay mode:

- Adjustment of the receiver’s volume from iPod touch, iPhone, iPad or iTunes.
- Pause/resume, next/previous track, and shuffle/repeat from the remote control of the receiver.
- Display of the currently playing track information on the receiver’s display, including artist, song and album name.

1: For more information, see the Apple website (http://www.apple.com).
2: The receiver’s power automatically turns on when Network Standby at Network Option is set to ON.
3: If operation is not possible, press NET, then operate again.

Notes

- A network environment is required to use AirPlay.
- The receiver’s name that shows up in the AirPlay UI on iPod touch, iPhone, iPad and iTunes can be changed by Friendly Name from Network Option.
- AirPlay provided on this receiver has been developed and tested based on the software versions for the iPod, iPhone, iPad and the software versions for iTunes that are indicated on the Pioneer website. AirPlay may not be compatible with iPod, iPhone, iPad or iTunes software versions other than those indicated on the Pioneer website.

About the DHCP server function

To play back audio files stored on components on the network or listen to Internet radio stations, you must turn on the DHCP server function of your router. In case your router does not have the built-in DHCP server function, it is necessary to set up the network manually. Otherwise, you cannot play back audio files stored on components on the network or listen to Internet radio stations. See "Setting network connection" on page 56 for more on this.

Authorizing this receiver

This receiver must be authorized to enable playback. This happens automatically when the receiver makes a connection over the network to the PC. If not, please authorize this receiver manually on the PC. The authorization (or permission) method for access varies depending on the type of server currently being connected. For more information on authorizing this receiver, refer to the instruction manual of your server.
About HTC Connect
This receiver features “HTC Connect”, a simple way to enjoy music content from your HTC Connect certified smartphone.
1 HTC Connect music streaming provided on this product has been developed based on interoperability testing as defined by the HTC Connect Certification program with the HTC Connect-compatible smartphones.
2 Music Navigation via the music progress bar is not currently supported with HTC Connect.
3 Third party music applications (those other than HTC’s pre-installed “Music” app) have not been tested for compatibility and may not work. HTC Connect has been tested with MP3, AAC, WMA and WAV encoding formats. Other formats may not be compatible.
4 High network congestion may interfere with the operation of HTC Connect.

HTC Connect Certified Smartphones
The HTC Connect-compatible smartphones. Please check Pioneer website for up to date information about compatible devices and audio format support.
http://www.pionerelectronics.com/htc (for USA)
http://www.pionerelectronics.ca/htc (for Canada)

Notes
• Specifications and design subject to modification without notice.
• HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.

Playback with Network functions

Important
• About one minute is required between turning the power on and completion of startup.
• When you play back audio files. ‘Connecting...’ is displayed before playback starts. The display may continue for several seconds depending on the type of file.
• In case a domain is configured in a Windows network environment, you cannot access a PC on the network while you are logged onto the domain. Instead of logging onto the domain, log onto the local machine.
• There are cases where the time elapsed may not be correctly displayed.

1 Press NET repeatedly to select the category you want to play back. It may take several seconds for this receiver to access the network.
Select a category from the following list:
• INTERNET RADIO – Internet radio
  — When INTERNET RADIO is selected, the radio station that was playing last time is played.
• PANDORA – Internet radio that supports Pandora
• Spotify – Music streaming distribution service
• MEDIA SERVER – Server components on the network
• FAVORITES – Favorite songs currently being registered
Depending on the selected category, the names of folders, files, and Internet radio stations are displayed.

2 Use ↑ / ↓ to select the folder, music files or Internet radio station to play back, and then press ENTER.
Press ↑ / ↓ to scroll up and down the list and select the desired item. When you press ENTER, playback starts with the playback screen being displayed for the selected item. To return to the list screen, press RETURN. When the list screen is displayed from the playback screen, the playback screen reappears automatically if no operation is performed for three minutes while the list screen is displayed.
Only audio files with the mark can be played. In case of the folders with the mark, use ↑ / ↓ and ENTER to select the desired folder and audio files.
• When o or p is pressed at the list screen, the page switches.
• To return to the playback screen from the list display, press DISP.

3 Repeat step 2 to play back the desired song.
For detailed operating instructions, refer to the section shown below.
• Internet radio stations – See Listening to Internet radio stations on page 81.
• Pandora – See Listening to Pandora Internet Radio on page 81.
• Spotify – See About the Spotify audio stream playback function on page 82.
• Media server – See Playing back audio files stored on components on the network on page 82.
• Favorites – See Playing back your favorite songs on page 82.

Basic playback controls
You can perform the following operations with the remote control of this receiver. Note that some buttons are not available for operation depending on the category currently being played back.
• Press NET to switch the remote control to the network operation mode.

Notes
• When input is MEDIA SERVER or FAVORITES, the following action is taken, depending on the server or file.
  — II may not work.
  — <-> and <-> may not work or may take the same action as <-> and <->.
• When input is MEDIA SERVER, by pressing TOOLS on the list display screen, you can switch the displayed titles in alphabetical order or track order.
Listening to Internet radio stations

Internet radio is an audio broadcasting service transmitted via the Internet. There are a large number of Internet radio stations broadcasting a variety of services from every corner of the world. Some are hosted, managed, and broadcast by private individuals while others are by the corresponding traditional terrestrial radio stations or radio networks. Whereas terrestrial, or OTA (over-the-air), radio stations are geographically restricted on the range of radio waves broadcast from a transmitter through the air, Internet radio stations are accessible from anywhere in the world, as long as there is a connection to the Internet, as services are not transmitted through the air but are delivered over the World Wide Web. On this receiver you can select Internet radio stations by genre as well as by region. Depending on the Internet line conditions, the sound may not be smooth when playing Internet radio.

About list of Internet radio

The list of Internet radio stations on this receiver is created, edited, and managed by the vTuner database service exclusively for use with this receiver. For details about vTuner, see vTuner on page 135.

Saving and retrieving Internet radio stations

You can easily save and retrieve saved Internet radio stations. See Playing back your favorite songs on page 82 for more on this.

- To listen to Internet radio stations, you must have high-speed broadband Internet access. With a 56 K or ISDN modem, you may not enjoy the full benefits of Internet radio.
- The port number varies depending on the Internet radio station. Check the firewall settings.
- A list of Internet radio stations provided by the vTuner database service is subject to change or deletion without notice due to various reasons.
- Broadcasts may be stopped or interrupted depending on the Internet radio station. In this case, you cannot listen to a radio station selected from the list of Internet radio stations.

Registering broadcast stations not on the vTuner list from the special Pioneer site

With the receiver, broadcast stations not included on the list of station distributed by vTuner can be registered and played. Check the access code required for registration on the receiver, use this access code to access the special Pioneer Internet radio site and register the desired broadcast stations in your favorites. The address of the special Pioneer Internet radio site is: http://www.radio-pioneer.com

1 Display the Internet Radio list screen.
To display the Internet Radio list screen, perform step 1 at Playback with Network functions on page 80.

2 Use †/ ‡ to select ‘Help’, then press ENTER.

3 Use †/ ‡ to select ‘Get access code’, then press ENTER.
The access code required for registration on the special Pioneer Internet radio site is displayed. Make a memo of this address.

The following can be checked on the Help screen:
- Get access code – The access code required for registration on the special Pioneer Internet radio site is displayed.
- Show Your WebID/PW – After registering on the special Pioneer Internet radio site, the registered ID and password are displayed.
- Reset Your WebID/PW – Resets all the information registered on the special Pioneer Internet radio site. When reset, all the registered broadcast stations are also cleared. If you want to listen to the same stations, re-register after resetting.

4 Access the special Pioneer Internet radio site from your computer and perform the registration process.
http://www.radio-pioneer.com
Access the above site and use the access code in step 3 to perform user registration, following the instructions on the screen.

5 Register the desired broadcast stations as your favorites, following the instructions on the computer’s screen.
Both broadcast stations not on the vTuner list and stations on the vTuner list can be registered. In this case they are registered on the receiver as favorite broadcast stations and can be played.

Listening to Pandora Internet Radio

Pandora is personalized internet radio that is designed to help you discover new music you’ll love mixed in with music you already know. For details, check the website: http://www.pandora.com

- You must have a registered account in order to listen to songs using Pandora Internet Radio.
- Select PANDORA, then follow the instructions on the screen to make the account settings.
- See the Pandora website for regions in which the Pandora service is offered.
- Some functions may be changed at Pandora’s discretion.

Notes

- When disposing of the product, we recommend you reset it to delete the data. See Resetting the system on page 95.
- Pandora®, the leading internet radio service, gives people music they love anytime, anywhere, through personalized radio stations.

Inputting characters using the software keyboard

1 Press TOOLS to switch to the software keyboard operation mode.
2 Use †/ ‡/ ←/ → to select letters or symbols, then press ENTER.
Repeat this until all the desired characters have been input.
3 Select ‘OK’ on the software keyboard, then press ENTER.
- To quit inputting characters using the software keyboard, press the TOOLS button.
About the Spotify audio stream playback function

Spotify is a music streaming distribution service managed and operated by Spotify Ltd. and distributing music over the Internet.

Spotify audio streams can be enjoyed using this unit and your smartphone or other mobile digital device.

Preparations (1) Installing the Spotify application on mobile digital devices and registering a Spotify Premium account

Important
- The Spotify application must be installed on mobile digital devices and you must have registered a Spotify Premium account (for a charge) in order to use the Spotify audio stream playback function on this unit. For registration procedures and other Spotify services, see the Spotify website.
  http://www.spotify.com/
  http://www.spotify.com/connect/
- For information on the countries and regions where Spotify services can be used, see the website below.
  http://www.spotify.com/
- Spotify functions may be changed without notice.

An Internet connection is required on the mobile digital device in order to use the Spotify application. Using the mobile telephone line for the Internet connection tends to lead to high packet communication charges, so we recommend subscribing to a fixed packet rate plan. For details, contact your mobile telephone operator.

Preparations (2) Connecting this unit to the network

- Connect this unit to the network and also to the Internet (pages 35, 49).
- Connect the mobile digital device by Wi-Fi to the wireless LAN router of the same network as the one to which this unit is connected. For instructions on connecting, see the operating instructions of the mobile digital device and the wireless LAN router.

In order to use the Spotify audio stream playback function from the Spotify application

To use the Spotify audio stream playback function, select this unit on the Spotify application. When Spotify audio streaming starts, this unit’s input automatically switches to Spotify.

CAUTION
Even if you are away from home, if you start Spotify audio streaming to play music on your mobile digital device and this unit is selected, the sound will be output from this unit. Depending on the volume level, the output may be loud, so be sure to check the audio output selection carefully before starting audio streaming. In addition, if you accidentally select this unit and play the sound on it, switch the audio output selection to the mobile digital device.

Notes
- A separate contract with/payment to an Internet service provider is required to use the Spotify audio stream playback function.
- This unit’s name is displayed as the playback device on the Spotify application. Also, this unit’s name can be changed at Friendly Name in the network settings.
- When this unit is selected with the Spotify application, the account information is registered on this unit as well. When disposing of this unit, reset this unit’s settings in order to delete the account information registered on this unit. For instructions on resetting, see this unit’s operating instructions.

Playing back audio files stored on components on the network

This unit allows you to play music on media servers connected on an identical Local Area Network (LAN) as the receiver. This unit allows for the playing of files stored on the following devices:
- PCs running Microsoft Windows Vista or XP with Windows Media Player 11 installed
- PCs running Microsoft Windows 7 or Windows 8 with Windows Media Player 12 installed
- DLNA-compatible digital media servers (on PCs or other components)

Playing back your favorite songs

Up to 64 favorite tracks on the media server and/or Internet radio stations can be registered in the Favorites folder. Note that only the audio files stored on components on the network can be registered.

Registering and deleting audio files and Internet radio stations in and from the Favorites folder

1. Press NET repeatedly to select the INTERNET RADIO or MEDIA SERVER.
2. With the track or Internet radio station you want to register selected, press +Fav (Favorite). The selected song or Internet radio station is then registered in the Favorite.

Note
To delete tracks or Internet radio stations that have been registered, set the input to FAVORITES, select the track or station to be deleted, then press the CLR button.

About network playback

The network playback function of this unit uses the following technologies:

Windows Media Player
See Windows Media Player 11/Windows Media Player 12 on page 136 for more on this.

DLNA

DLNA CERTIFIED™ Audio Player

The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

The DLNA certification logo makes it easy to find products that comply with the DLNA Interoperability Guidelines. This unit complies with DLNA Interoperability Guidelines v1.5.

When a PC running DLNA server software or other DLNA compatible device is connected to this player, some setting changes of software or other devices may be required. Please refer to the operating instructions for the software or device for more information.

DLNA™, the DLNA Logo and DLNA CERTIFIED™ are trademarks, service marks, or certification marks of the Digital Living Network Alliance.
Content playable over a network

- Even when encoded in a compatible format, some files may not play correctly.
- Movie or Photo files cannot be played back.
- There are cases where you cannot listen to an Internet radio station even if the station can be selected from a list of radio stations.
- Some functions may not be supported depending on the server type or version used.
- Supported file formats vary by server. As such, files not supported by your server are not displayed on this unit.
- For more information check with the manufacturer of your server.

Disclaimer for Third Party Content

ACCESS TO THIRD PARTY CONTENT SERVICES, INCLUDING ALL ASSOCIATED FEATURES AND FUNCTIONALITIES, IS PROVIDED “AS IS,” “AS AVAILABLE” AND AT THE USER’S OWN RISK, WITHOUT WARRANTY OF ANY KIND. PIONEER DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, IN CONNECTION WITH ACCESS TO AND USE OF CONTENT SERVICES THROUGH THIS DEVICE, INCLUDING WITHOUT LIMITATION WARRANTIES OF MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. PIONEER DOES NOT GUARANTEE, REPRESENT, OR WARRANT THAT CONTENT SERVICES WILL BE FREE FROM ERRORS, INTERRUPTION, LOSS, CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, OR OTHER SECURITY INTRUSION, AND PIONEER DISCLAIMS ANY LIABILITY IN CONNECTION WITH THE FOREGOING. PIONEER IS NOT LIABLE OR RESPONSIBLE FOR ANY LOSS OR DAMAGE ARISING FROM ACCESS TO OR USE OF CONTENT. NO ORAL OR WRITTEN INFORMATION OR ADVICE GIVEN BY PIONEER OR ITS CUSTOMER SERVICES REPRESENTATIVES WILL CREATE ANY SUCH WARRANTY.

IN NO EVENT WILL PIONEER, ITS AFFILIATES, OR THEIR RESPECTIVE OFFICERS, DIRECTORS, OR EMPLOYEES BE LIABLE IN CONNECTION WITH YOUR USE OF THIRD PARTY CONTENT SERVICES THROUGH THIS DEVICE FOR PERSONAL INJURY OR SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, INCLUDING WITHOUT LIMITATION DAMAGES FOR ATTORNEYS’ FEES, LOST DATA OR LOST PROFITS, REGARDLESS OF THE THEORY OF LIABILITY AND WHETHER OR NOT ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT WILL PIONEER’S TOTAL LIABILITY TO YOU FOR ALL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIRD PARTY CONTENT SERVICES (OTHER THAN AS MAY BE REQUIRED BY LAW IN CASES INVOLVING PERSONAL INJURY) EXCEED $10.00. THE FOREGOING LIMITATIONS WILL APPLY EVEN IF THE ABOVE REMEDY FAILS OF ITS ESSENTIAL PURPOSE. IF ANY APPLICABLE AUTHORITY HOLDS ANY PORTION OF THIS SECTION TO BE UNENFORCEABLE, THEN LIABILITY WILL BE LIMITED TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW.

About playback behavior over a network

- Playback may stall when the PC is switched off or any media files stored on it are deleted while playing content.
- If there are problems within the network environment (heavy network traffic, etc.) content may not be displayed or played properly (playback may be interrupted or stalled). For best performance, a 100BASE-TX connection between player and PC is recommended.
- If several clients are playing simultaneously, as the case may be, playback is interrupted or stalled.
- Depending on the security software installed on a connected PC and the setting of such software, network connection may be blocked.

Pioneer is not responsible for any malfunction of the player and/or the NETWORK features due to communication error/malfunctions associated with your network connection and/or your PC, or other connected equipment. Please contact your PC manufacturer or Internet service provider.

This product includes technology owned by Microsoft Corporation and cannot be used or distributed without a license from Microsoft Licensing, Inc. Microsoft, Windows, Windows Media and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
About playable file formats

The NETWORK feature of this receiver supports the following file formats. Note that some file formats are not available for playback although they are listed as playable file formats. Also, the compatibility of file formats varies depending on the type of server. Check with your server to ensure the compatibility of file formats supported by your server.

- Internet radio playback may be affected by the Internet communications environment, and in this case playback may not be possible even with the file formats listed here.
- With MP3, WAV, AAC, FLAC, AIFF and Apple Lossless files, when music files with the same format, sampling frequency, quantization bit number and number of channels are played successively, they are played with no gap.
  — Gapless playback is not possible when the format is being converted (transcoded) by the server.
  — Gapless playback is not possible in the DMR mode.
  — When AAC or MP3 format is used, sound is reproduced with the minimum gap. If you are conscious about gaps, use WAV or FLAC files.

</table>

* MPEG-1 Audio decoding technology licensed from Fraunhofer IIS and Thomson multimedia.
* b 32 kHz, 176.4 kHz and 192 kHz support 2-channel audio sources only.
* c When playing the 5.0 channel or 5.1 channel file in the sub zone, only the front left and right sound is played. Multichannel playback is only available with the main zone.
* d Audio for 5.0 ch and 5.1 ch for wireless connection can be played only when the sampling frequency is 48 kHz or below.
* d Files encoded using Windows Media Codec 9 may be playable but some parts of the specification are not supported; specifically, Pro, Lossless, Voice.
* e Uncompressed FLAC files are not supported. Pioneer does not guarantee playback.
* f DSD files cannot be played in the sub zone.
* g 5.6448 MHz is only compatible with VSX-90.
# Control with HDMI function

About the Control with HDMI function

Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.

- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

Important

- With Pioneer devices, the Control with HDMI functions are referred to as “KURO LINK”.
- You cannot use this function with components that do not support Control with HDMI.
- We only guarantee this receiver will work with Pioneer Control with HDMI-compatible components. However, we do not guarantee that all synchronized operations will work with components that support the Control with HDMI function.
- Use a High Speed HDMI®/™ cable when you want to use the Control with HDMI function. The Control with HDMI function may not work properly if a different type of HDMI cable is used.
- For details about concrete operations, settings, etc., refer also the operating instructions for each component.

Making Control with HDMI connections

You can use synchronized operation for a connected TV and other components.

- Be sure to connect the TV’s audio cable to the audio input of this unit. When the TV and receiver are connected by HDMI connections, if the TV supports the HDMI ARC (Audio Return Channel) function, the sound of the TV is input to the receiver via the HDMI OUT 1 terminal, so there is no need to connect an audio cable. In this case, set ARC at HDMI Setup to ON (see HDMI Setup on page 86).
- For details, see Connecting your TV and playback components on page 20 or 44.

Important

- When connecting this system or changing connections, be sure to switch the power off and disconnect the power cord from the wall socket. After completing all connections, connect the power cords to the wall socket.
- After this receiver is connected to an AC outlet, a 2 second to 10 second HDMI initialization process begins. After this process, the TV can be input via the HDMI OUT 1 terminal. When anything other than OFF is selected for this setting, the signal being input to the currently selected HDMI input is transferred. When OFF is selected, no HDMI input is transferred through when in the standby mode. (However, when Control with HDMI is set to ON, the HDMI signal is transferred through the Control with HDMI function even when in the standby mode.)
- To get the most out of this function, we recommend that you set the Control with HDMI feature, see Control with HDMI function on page 85.
- When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT 1 terminal. After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
- The Control with HDMI feature can be used with a TV connected to the HDMI OUT 1 terminal, but not with a TV connected to the HDMI OUT 2 terminal.

HDMI Setup

You must adjust the settings of this receiver as well as the connected Control with HDMI-compatible components in order to make use of the Control with HDMI function. For more information see the operating instructions for each component.

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
2 Select ‘System Setup’, then press ENTER.
3 Select ‘HDMI Setup’, then press ENTER.
4 Select the ‘Control’ setting you want. Choose whether you want to enable synchronized operations.
   - ON – Enables the Control with HDMI function. Set Control Mode and ARC in the subsequent setting items to the desired values.
   - OFF – The Control with HDMI function is disabled. The Control Mode and ARC functions in the subsequent setting items cannot be used.
5 Select the ‘Control Mode’ setting you want. Choose whether you want to enable synchronized operations.
   - ON – Enabled for the synchronized operations.
   - OFF – The synchronized operations disabled.
6 Select the ‘ARC’ setting you want. When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT 1 terminal. After setting the ARC, some time may be required for the connected device to be recognized and the sound to be produced.
   - ON – The TV’s sound is input via the HDMI terminal.
   - OFF – The TV’s sound is input from the Audio input terminals other than HDMI inputs.
7 Select the ‘Standby Through’ setting you want. It is possible to transfer signals from an HDMI-connected player to the TV when this receiver’s power is on standby.
   - LAST – The HDMI input whose HDMI signal is to be input for through transfer when in the standby mode. When LAST is selected, the signal being input to the currently selected HDMI input is transferred. When OFF is selected, no HDMI input is transferred through when in the standby mode. (However, when Control with HDMI is set to ON, the HDMI signal is transferred through by the Control with HDMI function even when in the standby mode.)
   - OFF – The HDI input is switched even when the receiver is in the standby mode. (Switch by pointing the remote control at the receiver and pressing the HDMI, BD, DVD or SAT/CBL button.)
   - Setting to anything other than OFF increases power consumption in the standby mode.
   - Setting can be used with devices that are not compatible with the Control with HDMI function.
   - The Standby Through function cannot be used with MHL-compatible devices.
8 When you're finished, press HOME MENU.
Before using synchronization

Once you have finished all connections and settings, you must:

1. Put all components into standby mode.
2. Turn the power on for all components, with the power for the TV being turned on last.
3. Choose the HDMI input to which the TV is connected to this receiver, and see if video output from connected components displays properly on the screen or not.
4. Check whether the components connected to all HDMI inputs are properly displayed.

About synchronized operations

Important

- Synchronized operations are enabled when Control Mode is set to ON after setting Control in HDMI Setup to ON. For details, see HDMI Setup on page 86.
- From the menu screen of the Control with HDMI-compatible TV, set audio to be played through this receiver, and the receiver will switch to the synchronized amp mode.
- When in the synchronized amp mode, you can adjust the receiver’s volume or mute the sound using the TV’s remote control.
- When in the synchronized amp mode, the synchronized amp mode is canceled when the receiver’s power is turned off. To turn the synchronized amp mode back on, set audio to be played through the receiver from the TV’s menu screen, etc. This receiver will power up and switch to the synchronized amp mode.
- When the synchronized amp mode is canceled, the receiver’s power turns off if you were viewing an HDMI input or a TV program on the TV.
- When in the synchronized amp mode, the synchronized amp mode is canceled if an operation that produces sound from the TV is performed from the TV’s menu screen, etc.
- When the TV’s power is set to standby, the receiver’s power is also set to standby. (Only when the input for a component connected to the receiver by HDMI connection is selected or when watching the TV.)
- The receiver’s input switches automatically when the Control with HDMI-compatible component is played.
- The receiver’s input switches automatically when the TV’s input is switched.
- The synchronized amp mode remains in effect even if the receiver’s input is switched to a component other than one connected by HDMI.

The operations below can also be used on Pioneer Control with HDMI-compatible TVs.

- When the receiver’s volume is adjusted or the sound is muted, the volume status is displayed on the TV’s screen.
- When the OSD language is switched on the TV, the receiver’s language setting also switches accordingly.

Sound Retriever Link

These are automatic functions allowing you to output optimum audio and video signals from the receiver using the Control with HDMI function. When a player supporting the respective function is connected to the receiver by HDMI, the sound/picture is optimized for the compressed audio/video file played on the player.

- Depending on the compressed audio/video file format, it may not be operated automatically.
- Also see the player’s operating instructions.

When playing a compressed audio file on the player, the file’s bitrate information is acquired using the Control with HDMI function, and the sound is optimized on the receiver based on this information.

To activate the Sound Retriever Link function, make the setting below.

1. Set the HDMI Setup’s Control to ON, and set the Control Mode setting to ON.
   See HDMI Setup on page 86.
2. Set the S.RTRV (Auto Sound Retriever) setting to ON.
   See Setting the Audio options on page 89.

Cautions on the Control with HDMI function

- Connect the TV directly to this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.
- Only connect components (Blu-ray Disc player, etc.) you intend to use as a source to the HDMI input of this receiver. Interrupting a direct connection with other amps or an AV converter (such as an HDMI switch) can cause operational errors.
- When the receiver’s Control is turned ON, even if the receiver’s power is in the standby mode, it is possible to output the audio and video signals from a player via HDMI to the TV without producing sound from the receiver, but only when a Control with HDMI-compatible component (Blu-ray Disc player, etc.) and compatible TV are connected. In this case, the receiver’s power turns on and the power and HDMI indicators light.
- If the Control setting is not set to OFF, the power consumption during standby will increase.

Using other functions

**Setting the Audio options**

There are a number of additional sound settings you can make using the AUDIO PARAMETER menu. The defaults, if not stated, are listed in bold.

**Important**

- Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press AUDIO P.

2. Use ‹/› to select the setting you want to adjust. Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.

3. Use ‹/› to set as necessary. See the table below for the options available for each setting.

4. Press RETURN to confirm and exit the menu.

### Audio parameter menu

<table>
<thead>
<tr>
<th>Setting</th>

<tr>
<td><strong>PHASE</strong> (Phase Control)</td>
<td>Switches on/off the effects of Phase Control. It is automatically set to FULLBND when Full Band Phase Control measurement is performed. You cannot select FULLBND before the measurement.</td>
<td></td>
</tr>
<tr>
<td><strong>PHASE C+</strong> (Phase Control Plus)</td>
<td>For discs created with standards other than Phase Control, the LFE channel is delayed upon recording in the first place. This function corrects for phase shifting on such discs. This function is particularly effective when playing multi-channel music containing low frequency effects (LFE). When AUTO is selected, not only the low range delay but also the polarity and correlation are detected to achieve the optimum effect.</td>
<td></td>
</tr>
<tr>
<td><strong>DELAY</strong> (Sound Delay)</td>
<td>Some monitors have a slight delay when showing video, so the soundtrack will be slightly out of sync with the picture. By adding a bit of delay, you can adjust the sound to match the presentation of the video.</td>
<td></td>
</tr>
<tr>
<td><strong>TONE</strong> (Tone Control)</td>
<td>Applies the treble and bass tone controls to a source, or bypasses them completely.</td>
<td></td>
</tr>
</tbody>
</table>

### Setting | What it does | Option(s)
--- | --- | ---
BASS | Adjusts the amount of bass. | -6 to +6 (dB) ▶ Default: 0 (dB) |
TREBLE | Adjusts the amount of treble. | -6 to +6 (dB) ▶ Default: 0 (dB) |
S.RTRV (Auto Sound Retriever) | With the Auto Sound Retriever function, DSP processing is used to compensate for the loss of audio data upon compression, improving the sound’s sense of density and modulation. Also, when a player supporting the Sound Retriever Link function is connected to the receiver by HDMI, by setting this to ON, the bitrate information of the compressed audio file being played on the player is acquired using the Control with HDMI function, and the sound is optimized based on this information (Sound Retriever Link). | OFF/ON |
DNR (Digital Noise Reduction) | May improve the quality of sound in a noisy source (for example, videotape with lots of background noise) when switched on. This only has an effect with 2-channel signal inputs. This mode is effective for contents with a sampling frequency of 48 kHz or less. | OFF/ON |
DIALLOE E (Dialog Enhancement) | Localizes dialog in the center channel to make it stand out from other background sounds in a TV or movie soundtrack. | OFF/FLAT/FLAT |
Hi-bit24 | Creates a wider dynamic range with digital sources like CDs, DVDs or BDs. 16- and 20-bit PCM as well as compressed audio is requantized to 24 bits, more subtle musical expression. This mode is effective for contents with a sampling frequency of 48 kHz or less. | ON/OFF |
DUAL (Dual Mono) | Specifies how dual mono encoded Dolby Digital soundtracks should be played. Dual mono is not widely used, but is sometimes necessary when two languages need to be sent to separate channels. | CH1 = Channel 1 is heard only/CH2 = Channel 2 is heard only/CH1 CH2 = Both channels heard from front speakers |
SIGSEL (Signal Select) | Use to switch the input signal type (analog/digital/HDMI) | AUTO/ANALOG/DIGITAL/HDMI |
Fixed PCM | This is useful if you find there is a slight delay before OFF recognizes the PCM signal on a CD, for instance. When ON is selected, noise may be output during playback of non-PCM sources. Please select another input signal if this is a problem. | OFF/ON |
DRC (Dynamic Range Control) | Adjusts the level of dynamic range for movie soundtracks optimized for Dolby Digital, DTS, Dolby Digital Plus, Dolby TrueHD, DTS-HD and DTS-HD Master Audio (you may need to use this feature when listening to surround sound at low volumes). | AUTO/MAX/MID/OFF |
Loud Mgmt (Loudness Management) | This is a setting of the post process function of the Dolby TrueHD decoder. By setting to OFF, you can enjoy higher sound quality. This can only be set when DRC is set to OFF and the input signal is a Dolby TrueHD signal. | OFF/ON |

---

Note that if a setting doesn’t appear in the AUDIO PARAMETER menu, it is unavailable due to the current source, settings and status of the receiver.
### Setting | What it does | Option(s)
--- | --- | ---
#### LFE (LFE Attenuate)
- Some audio sources include ultra-low bass tones. Set the LFE attenuator as necessary to prevent the ultra-low bass tones from distorting the sound from the speakers.
- When set to the recommended value of 0 dB, the LFE is not restricted.
- When set to a value other than 0 dB, the LFE is restricted to the set value.
- When OFF is selected, the sound is not output from the LFE channel.
- Default: 0 dB
- AUTO
- OFF
- OFF
- OFF
- Default: 0 dB

#### INPUT ATT (Input attenuator)
- If the sound is distorted, this can be used to lower the input signal level and reduce the distortion.
- Default: OFF
- ON
- OFF
- OFF

#### HDMI (HDMI Audio)
- Specifies the routing of the HDMI audio signal out of this receiver (amp) or through to a TV. When THROUGH is selected, no sound is output from this receiver.
- Default: AMP
- THROUGH
- OFF
- OFF

#### A.DELAY (Auto delay)
- This feature automatically corrects the audio-to-video delay between components connected with an HDMI cable. The audio delay time is set depending on the operational status of the display connected with an HDMI cable. The video delay time is automatically adjusted according to the audio delay time.
- Default: ON
- OFF

#### C.WIDTH (Center Width)
- Provides a better blend of the front speakers by spreading the center channel between the front right and left speakers, making it sound wider (higher settings) or narrower (lower settings).
- Default: 0 to 7
- Default: 3

#### DIMENSION (Center Image Width)
- Adjusts the depth of the surround sound balance from front to back, making the sound more distant (minus settings), or more forward (positive settings).
- Default: +3
- Default: 0

#### PANORAMA (Center Image View)
- Extends the front stereo image to include the surround speakers for a "wraparound" effect.
- Default: OFF
- ON

#### C.IMAGE (Center Image)
- Adjusts the center image to create a wider stereo effect with vocals.
- Default: 0 to 10
- Default: Neo6 CINEMA: 10
- Default: Neo6 MUSIC: 3

#### EFFECT
- Sets the effect level for the ALC mode.
- Default: 50
- Default: 50

#### C.S.PREAD (Center Spread)
- Center spread expands the center channel signal to the left and right front speakers to create a wider frontal audio image for the listener. It is optimized and designed primarily for playback of stereo music content.
- Default: OFF
- Default: ON

#### V.SPs (Virtual Speakers)
- When AUTO is selected, the sound field is created with the surround back and front wide channels whose Speaker Setting is set to NO automatically complemented.
- To set the respective channels individually, select MANUAL.
- Default: AUTO
- Default: MANUAL
- Default: OFF
- Default: ON

#### V.SB (Virtual Surround Back)
- When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information.
- Default: OFF
- Default: ON

#### V.HEIGHT (Virtual Height)
- Settings to create virtual front height channel audio.
- Default: OFF
- Default: ON

### Setting | What it does | Option(s)
--- | --- | ---
#### V.WIDE (Virtual Wide)
- When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers.
- This improves the continuity of the sound from the front channel to the surround channels.
- Default: OFF
- Default: ON

#### RENDER (Rendering Mode)
- Allows you to choose which signal, object base (OBJECT) or channel base (LEGACY), to decode when playing back Dolby Atmos content.
- Default: OBJECT
- Default: LEGACY

- a. VSX-90 only.
- b. The adjustment can be made only when TONE is set to ON.
- c. If the default value changes depending on the type of input (page 95).
- d. When ON is selected, the Sound Retriever effect is optimized based on the bitrate information of the contents input to the USB memory audio and INTERNET RADIO, PANDORA, Spotify, MEDIA SERVER, FAVORITES (digital audio input only) to achieve high sound quality.
- e. When ON is selected, optimum correction of the audio signals input via the HDMI OUT terminal is conducted with the HDMI ARC (Audio Return Channel) function, and the sound of digital TV broadcasts is produced with HD quality. This is valid when the input is set to TV and ARC in HDMI Setup is set to ON. (See HDMI Setup on page 87.)
- f. This function does not work when the sampling frequency is 32 kHz.
- g. This function is available when the sampling frequency is 48 kHz or less.
- h. AUTO is only available for Dolby TrueHD signals. Select MAX or MID for signals other than Dolby TrueHD.
- i. This feature is only available when the connected display supports the automatic audio/video synchronizing capability (Lipsync) for HDMI. If you find the automatically set delay time unsuitable, set A.DELAY to OFF and adjust the delay time manually. For more details about the Lipsync feature of your display, contact the manufacturer directly.
- j. The default value changes depending on the type of input (page 95).
- k. This can be set when MANUAL is selected for V.SPs.
- l. You can’t use the Virtual Height when the headphones are connected to this receiver or when any of the stereo, Front Stage Surround Advance, Sound Retriever Air or Stream Direct modes is selected.
- m. This can be set when MANUAL is selected for V.SPs.
- n. This can be set when MANUAL is selected for V.SPs.
- o. This can be set when MANUAL is selected for V.SPs.
- p. This mode is effective for contents with a sampling frequency of 48 kHz or less.
o  This can be set when MANUAL is selected for VSAT.
  - You can’t use the Virtual Wide mode when the headphones are connected to this receiver or when any of the stereo, Front Stage Surround Advance, Sound Retriever Air or Stream Direct modes is selected.
  - VSX-90 only: You can only use the Virtual Wide mode if the surround speakers are on and the FW setting is set to NO. It can also not be used when playing signals containing actual front wide channel information.
  - VSX-45 only: This setting is available when the surround speaker is on, and Speaker System is 5.2ch.
  • This mode is effective for contents with a sampling frequency of 48 kHz or less.
  - When neither the top middle, surround back, or front wide speaker is connected, Dolby Atmos does not play.

p  When MAIN RECEIVER is switched to the remote control operation mode, and

**Setting the Video options**
Resolution can be set here. Select the settings according to your preference.

**Important**
- Note that if an option cannot be selected on the VIDEO PARAMETER menu, it is unavailable due to the current source, setting and status of the receiver.
- All of the setting items can be set for each input function. However, with the audio only input function, VIDEO PARAMETER cannot be set.
- VSX-90 only: When MAIN/HDZONE is set to HDZONE, the VIDEO PARAMETER menu setting only affects the HDMI OUT 1 terminal signal.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and
2. Use § / § to select the setting you want to adjust.
Depending on the current status/mode of the receiver, certain options may not be able to be selected. Check the table below for notes on this.
3. Use ê/ê to set as necessary.
See the table below for the options available for each setting.
4. Press RETURN to confirm and exit the menu.

### Video parameter menu

</table>

a  • Video may not be output properly depending on the HDMI cable that is upscaling to 4K. In that case, switch to PURE.
  - When setting the AUTO when connected to a television that is 4K compatible, 1080p/60 is up-scaled to 4K/60p and 1080p/24 is up-scaled to 4K/24p. Input video other than HDMI is output as the input resolution. Also, when selecting PURE, the input resolution is output as is (About the video converter on page 91).
  - When PURE is selected and the input signal is 480i, the on-screen display cannot be displayed.

b  This can be set only when AUTO is selected for SCAL.

### Switching the output (OUTPUT PARAMETER)
You can press OUT P. to switch the output of speaker terminals or HDMI terminals to be played.

### Switching the speaker terminals

#### In case of VSX-90
If you selected 7.2ch/5.2.2ch, 7.2ch SB/FW or Speaker B at Speaker system setting on page 110, you can switch between speakers using the OUT P. button.
If you selected Front Bi-Amp. ZONE 2 or HDZONE, the button will simply switch your main speaker terminals on or off.

**1** Press OUT P.:
- You can perform the same operation by pressing SPEAKERS on the front panel.
**2** Use § / § to select ‘SP’.
**3** Use ê/ê to switch the speaker terminals to be played.
As mentioned above, if you have selected Front Bi-Amp. ZONE 2 or HDZONE, the button will simply switch your main speaker terminal (A) on or off.

Press repeatedly to choose a speaker terminal option:
When you select 7.2ch/5.2.2ch, you can select from:
- **SP**: SB/TMD ON – Surround back or top middle channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output. The surround back and top middle channels are switched automatically according to the audio input signal.
- **SP**: SB ON – Surround back channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- **SP**: TMD ON – Top middle channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- **SP**: OFF – No sound is output from the speakers.
When you select 7.2ch SB/FW, you can select from:
- **SP**: SB/FW ON – Surround back or front wide channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output. The surround back and front wide channels are switched automatically according to the audio input signal.
- **SP**: SB ON – Surround back channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- **SP**: FW ON – Front wide channels are added to the front, center and surround channels (maximum 5 channels) and a maximum of 7 channels are output.
- **SP**: OFF – No sound is output from the speakers.

When you select Speaker B, you can select from:
- **SP**: A ON – Sound is output from the A-speaker terminals (up to 7 channels (including surround back channel)), depending on the source.
- **SP**: B ON – Sound is output from the two speakers connected to the B-speaker terminals. Multichannel sources will not be heard.
- **SP**: A+B ON – Sound is output from the A-speaker terminals (up to 5 channels, depending on the source), the two speakers connected to the B-speaker terminals, and the subwoofer. The sound from the B-speaker terminals will be the same as the sound from the A-speaker terminals (multichannel sources will be downmixed to 2 channels).
- **SP**: OFF – No sound is output from the speakers.
**Notes**
- The subwoofer output depends on the settings you made in Manual speaker setup on page 110. However, if SP: B ON is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).
- All speaker systems (except Speaker B connections) are switched off when headphones are connected.

**In case of VSX-45**
- Press SP-A/B.
  - Switches the speaker play on/off.
  - You can perform the same operation by pressing SPEAKERS on the front panel.
  - When you select Speaker B, you can select from:
    - SP: A ON – Sound is output from the A-speaker terminals (up to 5 channels including surround channels), depending on the source.
    - SP: B ON – Sound is output from the two speakers connected to the B-speaker terminals. Multichannel sources will not be heard.
    - SP: A+B ON – Sound is output from the A-speaker terminals (up to 3 channels, depending on the source), the two speakers connected to the B-speaker terminals, and the subwoofer. The sound from the B-speaker terminals will be the same as the sound from the A-speaker terminals (multichannel sources will be downmixed to 2 channels).
    - SP: OFF – No sound is output from the speakers.

**Notes**
- The subwoofer output depends on the settings you made in Manual speaker setup on page 110. However, if SP: B ON is selected above, no sound is heard from the subwoofer (the LFE channel is not downmixed).
- All speaker systems (except Speaker B connections) are switched off when headphones are connected.

### Switching the HDMI output
**VSX-90 only**

Set which terminal to use when outputing video and audio signals from the HDMI output terminals. The HDMI OUT 1 terminal is compatible with the Control with HDMI function.

1. Press OUT P..
2. Use \( \uparrow / \downarrow \) to select ‘OUT 1/2’.
3. Use \( \leftrightarrow \) to select the output settings for the HDMI OUT 1 and HDMI OUT 2 terminals.
   - Press a while when Please wait ... is displayed.
   - The output switches among OUT 1+2, OUT 1, OUT 2 and OFF each time the button is pressed.
   - The synchronized amp mode is canceled when the HDMI output is switched. If you wish to use the synchronized amp mode, switch to OUT 1, then select the synchronized amp mode on the TV using the TV’s remote control.
   - When MAIN/HDZONE is set to HDZONE, it is not possible to switch to OUT 2 (page 114).
4. When you’re finished, press RETURN.

### HDMI 4K/60p signal output setting
If the TV to be connected using HDMI supports 4K/60p, you can switch the 4K/60p signal output setting in accordance with TV performance.

Operation is performed on the front panel of the unit. You cannot perform the setting if the multizone function is not set to MULTI ZONE OFF (page 93).

1. Switch the receiver into standby.
2. While holding down ENTER on the front panel, press \( \odot \) STANDBY/ON.
The display shows RESET ☑ NO ☐.
3. Select an input terminal that you wish to change settings using \( \uparrow / \downarrow \).
   - 4K/60pBD – Sets the signal for the BD IN terminal.
   - 4K/60pH1 – Sets the signal for the HDMI IN 1 terminal.
   - 4K/60pH2 – Sets the signal for the HDMI IN 2 terminal.
4. Use \( \leftrightarrow \) to select the signal to set.
   - 4:4:4 – Select this setting when connecting to a 4K/60p 4:4:4 24 bit compatible TV using HDMI. More high quality video images can be enjoyed.
   - When the HDMI cable does not support 4K/60p 4:4:4 24 bit (18 Gbps transmission), video image may not be output properly. In that case, select 4:2:0 to watch a 4K/60p 4:2:0 24 bit video image.
   - 4:2:0 – Select this setting when connecting to a 4K/60p 4:2:0 24 bit compatible TV using HDMI.
5. When you’re finished, press RETURN.
6. Press \( \odot \) STANDBY/ON to switch on the receiver and your TV.

Make sure that the TV’s video input is set to this receiver.

### Changing the channel level while listening
Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1. Press CH LV..
2. Use \( \uparrow / \downarrow \) to select the channel you wish to adjust.
3. Adjust the volume using \( \leftrightarrow \).
   - The volume can be adjusted in the range of \(-12.0\text{dB}\) to \(+12.0\text{dB}\), 0.5 dB steps.
4. When you’re finished, press RETURN.

### Input Volume Absorber
This can be used to correct for the difference in volume between input sources.

1. Switch to the input whose volume you want to adjust.
2. Press CH LV..
3. Use \( \uparrow / \downarrow \) to select ‘ALL’.
4. Adjust the volume using \( \leftrightarrow \).
   - The volume can be adjusted in the range of \(-12.0\text{dB}\) to \(+12.0\text{dB}\), 0.5 dB steps.
5. When you’re finished, press RETURN.
Using the MULTI-ZONE controls

VSX-90 only

The following steps use the front panel controls to adjust the sub zone volume and select sources. See ZONE 2 remote controls and HDZONE remote controls on page 93.

Important
• The settings must be changed at ZONE Setup in order to use the HDZONE function (page 114).

1 Press MULTI-ZONE ON/OFF on the front panel.

Each press selects a MULTI-ZONE option:
• ZONE 2 ON – Turns on the MULTI-ZONE feature for ZONE 2.
• Z2&HDZONE ON – Turns on the MULTI-ZONE feature for ZONE 2 and the HDZONE.
• HDZONE ON – Turns on the MULTI-ZONE feature for the HDZONE.
• MULTI ZONE OFF – Switches the MULTI-ZONE feature off
The MULTI-ZONE indicator lights when the MULTI-ZONE control has been switched ON.

2 Press MULTI-ZONE CONTROL on the front panel to select the sub zone(s) you want.

• When the receiver is on, make sure that any operations for the sub zone are done while ZONE and your selected sub zone(s) show in the display. If this is not showing, the front panel controls affect the main zone only.

3 Use the INPUT SELECTOR dial to select the source for the sub zone.

For example, ZONE 2 SAT/CBL sends the source connected to the SAT/CBL inputs to the sub room (ZONE 2).

• If you select TUNER, you can use the tuner controls to select a preset station (see Saving station presets on page 70 if you’re unsure how to do this). The tuner cannot be tuned to more than one station at a time. Therefore, changing the station in one zone also changes the station in the other zone. Please be careful not to change stations when recording a radio broadcast.

4 Use the MASTER VOLUME dial to adjust the volume for the sub zone.

When Speaker System is set to something other than ZONE 2, the volume output from the receiver’s AUDIO ZONE 2 OUT terminals can be fixed to –40 dB or 0 dB and the volume can be adjusted from the connected amplifier. If you want to adjust the volume from the connected amplifier, see ZONE Setup on page 114.

5 When you’re finished, press MULTI-ZONE CONTROL again to return to the main zone controls.

You can also press MULTI-ZONE ON/OFF on the front panel to switch off all output to the sub zone.

• You won’t be able to switch the main zone off completely unless you’ve switched off the MULTI-ZONE control first.

• If you don’t plan to use the MULTI-ZONE feature for a while, turn off the power in both the sub and main rooms so that this receiver is in standby.

Note
When HDZONE is turned on, the video converter function is disabled. For that reason, video connected with the video cable or component cable is not output from the HDMI terminal. To enable the video converter function, turn off HDZONE.

ZONE 2 remote controls

Before operation, hold down Z2 on the remote control (for 1.5 seconds) until the remote control LED flashes one time.
The following table shows the possible ZONE 2 remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL</td>
<td>Switches on/off power in the sub zone.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function in the sub zone.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the sub zone.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

Note
• The Z3 button is not used with this unit.

HDZONE remote controls

Before operation, hold down HDZ on the remote control (for 1.5 seconds) until the remote control LED flashes one time.
The following table shows the possible HDZONE remote controls:

<table>
<thead>
<tr>
<th>Button(s)</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL</td>
<td>Switches on/off power in the HDZONE.</td>
</tr>
<tr>
<td>Input function buttons</td>
<td>Use to select the input function in the HDZONE.</td>
</tr>
<tr>
<td>VOLUME +/-</td>
<td>Use to set the listening volume in the HDZONE.</td>
</tr>
<tr>
<td>MUTE</td>
<td>Mutes the sound or restores the sound if it has been muted (adjusting the volume also restores the sound).</td>
</tr>
</tbody>
</table>

Note
• You can operate this only when Speaker System is set to HDZONE.
Using other functions

Network settings from a web browser
Network settings and Pandora account settings can be made using the browser on a computer connected to the same LAN as the receiver.

1 Press STANDBY/ON to switch on the receiver.
2 Turn on the computer's power and launch the Internet browser.
3 Input the receiver’s IP address into the browser’s address input field.
   Access the IP address “http://(the receiver’s IP address)” from a web browser. You can display the IP address of the unit on the unit’s display by pressing the STATUS button on the remote control.
   When connected with the receiver, the AVNavigator menu screen appears in the browser.
4 On the AVNavigator menu screen, select Network Setup.
5 Select the item you want to set.

Using the sleep timer
The sleep timer switches the receiver into standby after a specified amount of time so you can fall asleep without worrying about the receiver being left on all night. Use the remote control to set the sleep timer.

- Press SLEEP repeatedly to set the sleep time.
  
  30 min 60 min
  Off 90 min

- You can check the remaining sleep time at any time by pressing SLEEP once. Pressing repeatedly will cycle through the sleep options again.
- The sleep timer is valid for all zones. If any zone is on, the sleep timer continues functioning.

Dimming the display
You can choose between four brightness levels for the front panel display. Note that when selecting sources, the display automatically brightens for a few seconds.

- Press DIMMER repeatedly to change the brightness of the front panel display.
  - You can also choose to turn the display off. In this case, the FL OFF indicator lights.

Checking your system settings
Use the status display screen to check your current settings for features such as surround back channel processing and your current MCACC preset.

1 Press STATUS.
2 Use $ or # to check the system setting.
   The information on the main unit display switches as shown below each time one of the buttons is pressed.
   IP address → Wi-Fi status (displayed when running Wi-Fi) → audio format → sampling frequency → MCACC memory → auto-phase control plus correction result value → Input source played with ZONE 2 (VSX-90 only) → Input source played with HDZONE (VSX-90 only) → HDMI output settings (VSX-90 only)

- For some settings, some items are not displayed.
3 When you’re finished, press STATUS again to switch off the display.
Using other functions

Reseting the system
Use this procedure to reset all the receiver’s settings to the factory default. Use the front panel controls to do this. Set MULTI-ZONE to MULTI ZONE OFF.

- Disconnect the iPod and USB memory device from the receiver beforehand.
- Set the Control with HDMI to OFF (see HDMI Setup on page 86).

1 Switch the receiver into standby.
2 While holding down ENTER on the front panel, press STANDBY/ON. The display shows RESET NO.
3 Select ‘RESET’ using PRESET, then press ENTER on the front panel. The display shows RESET? OK.
4 Press ENTER to confirm. OK appears in the display to indicate that the receiver has been reset to the factory default settings.

Note that all settings will be saved, even if the receiver is unplugged.

About the Remote Setup menu

The Remote Setup mode is set by pressing the number button while pressing RCU SETUP. The different items on the Remote Setup menu are described below. For their setting procedures, refer to the explanations for the respective items.

<table>
<thead>
<tr>
<th>Setting</th>
<th>What it does</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change RC mode</td>
<td>If you have multiple Pioneer receivers, amplifiers, etc., this setting can be used to prevent other units from operating simultaneously when the remote control unit is operated. See Operating multiple receivers on page 97.</td>
</tr>
<tr>
<td>Preset recall</td>
<td>Preset codes can be set for the various input functions. The remote control codes of a number of other devices (including products of other brands) are preset in the remote control to allow these devices to be operated. See Setting the remote to control other components on page 99.</td>
</tr>
<tr>
<td>Code learning</td>
<td>If the desired operations cannot be performed even though you have set the preset codes, the remote control signals of other devices can be learned directly. See Programming signals from other remote controls on page 98.</td>
</tr>
<tr>
<td>Erase learning</td>
<td>This function is used to erase remote control codes that have been learned. Codes learned for the different input functions can be erased individually. See Erasing all learnt settings that are in one input function on page 99.</td>
</tr>
<tr>
<td>Reset learning</td>
<td>This is a function for resetting preset codes that have been set. Key resetting can be done for individual input functions. See Erasing one of the remote control button settings on page 98.</td>
</tr>
<tr>
<td>Operation mode switching time</td>
<td>You can set to automatically switch to AV amplifier operation mode when a certain period of time elapses after remote operation of each input function is finished. See Setting the switching time for the receiver on page 99.</td>
</tr>
<tr>
<td>All reset</td>
<td>This is a function for resetting all remote control unit settings you have made to the defaults set upon shipment from the factory. See Resetting the remote control settings on page 99.</td>
</tr>
</tbody>
</table>

Notes

- You can cancel or exit any of the steps by pressing RCU SETUP.
- After one minute of inactivity, the remote automatically exits the operation.

Operating multiple receivers

Up to four receivers can be operated discretely using this receiver’s remote control when using multiple receivers, provided they are of the same model as this receiver. The receiver to be operated is switched by inputting the preset code to set the remote control setting.

- Set the remote modes on the receivers before using this function (see Remote Control Mode Setup on page 114).

1. Press and hold RCU SETUP, then press ‘4’ for three seconds.
   - Release the button after the LED flashes once. The LED continues to flash.
   - To cancel the preset setup mode press RCU SETUP.

2. Press the number button for the receiver (“Receiver 1” to “Receiver 4”) you wish to operate.
   - For example, to operate “Receiver 2”, press ‘2’.
   - If the LED lights for one second, the setting has been successfully completed.
   - When the preset code is input, the LED flashes three times to indicate that the setting has failed.

Selecting preset codes directly

1. Press and hold RCU SETUP, then press ‘1’ for three seconds.
   - Release the button after the LED flashes once. The LED continues to flash.
   - To cancel the preset setup mode press RCU SETUP.

2. Press the input function button for the component you want to control.
   - To assign the preset codes of the TV to be operated with the TV INPUT button, press the TV INPUT button.
   - The LED of the remote control lights.

3. Use the number buttons to enter the 4-digit preset code.
   - See Preset code list on page 140.
   - If the LED lights for one second and continues to flash, the setting has been successfully completed.
   - When the preset code is fully input, the LED flashes three times to indicate that the setting has failed. If this happens, enter the 4-digit preset code again.

4. Repeat steps 2 through 3 for the other components you want to control.
   - To try out the remote control, switch the component on or off (into standby) by pressing © SOURCE. If it doesn’t seem to work, select the next code from the list (if there is one).

5. Press RCU SETUP to exit the preset setup mode.
Programming signals from other remote controls

If the preset code for your component is not available, or the available preset codes do not operate correctly, you can program signals from the remote control of another component. This can also be used to program additional operations (buttons not covered in the presets) after assigning a preset code.

The remote can store about 120 preset codes from other components (this has been tested with codes of Pioneer format only).

Certain buttons represent operations that cannot be learned from other remote controls. The buttons available are shown below:

- STANDBY/ON
- ENTER
- SOURCE
- INPUT
- TV VOL
- RECEIVER
- ENTERCLR
- CH
- CH
- 2
- 5
- 4
- 8
- 0
- 7
- 9
- Fac

1. Press and hold RCU SETUP, then press ‘2’ for three seconds.
2. Press the input function button for the component you want to control.
   The LED blinks once and flashes continuously.
3. Point the two remote controls towards each other, then press the button that will be doing the learning on this receiver’s remote control.
   The LED flashes once, then stops flashing, remaining lit.
   • The remote controls should be 3 cm (1 inch) apart.
4. Press the corresponding button on the other remote control that is sending (teaching) the signal to this receiver’s remote control.
   If the LED lights for one second and continues to flash, the setting has been successfully completed.
   • If the LED flashes for five seconds, it means the memory is full. See Erasing all learnt settings that are in one input function on page 99 to erase a programmed button you’re not using to free up more memory (note that some signals may take more memory than others).
   • Note that interference from TVs or other devices will sometimes result in the remote control learning the wrong signal.
   • Some commands from other remote controls cannot be learned, but in most cases the remotes just need to be moved closer together or farther apart.
5. To program additional signals for the current component repeat steps 3 and 4.
   To program signals for another component, exit and repeat steps 2 through 4.
6. Press RCU SETUP to exit the programming mode.

Erasing one of the remote control button settings

This erases one of the buttons you have programmed and restores the button to the factory default.

1. Press and hold RCU SETUP, then press ‘8’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   • To “learn” codes at the TV buttons, proceed to step 3.
   • To cancel the preset setup mode press RCU SETUP.
2. Press the input function button corresponding to the command to be erased.
   The LED flashes once.
3. Press and hold the button to be erased for three seconds.
   If the LED lights for one second, the erasing has been successfully completed.
4. Repeat step 3 to erase other buttons.
5. Press RCU SETUP to exit the erasing mode.
Controlling the rest of your system (VSX-90 only)

Erasing all learnt settings that are in one input function
This operation erases all the operational settings of other devices that have been programmed in one input function, and restores the factory default.
This function is handy for erasing all data programmed for devices no longer being used.
1. Press and hold RCU SETUP, then press ‘9’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
   • To cancel the preset setup mode press RCU SETUP.
2. Press and hold the input function button corresponding to the command to be erased for three seconds.
   To erase the operations registered at all the TV buttons, press the TV INPUT button for 3 seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Using All Zone Standby
The All Zone Standby can be used to turn all zones to OFF when the receiver’s power is switched to standby.
Also, when using separate Pioneer amplifiers/receivers for the sub zones, they can also be set to standby simultaneously.
• In order to set the power of amplifiers/receivers connected to sub zones to the standby mode, the connected amplifiers/receivers must be installed or connected in such a way that they can receive remote control signals.
• The power of the amplifiers/receivers can be switched to standby with this operation even when using multiple Pioneer amplifiers/receivers and their Remote Control Mode have been changed.
1. Press ALL ZONE STBY.
   The LED continues to flash.
2. Press STANDBY/ON.
   The receiver’s power switches to standby and all zones are turned off.

Setting the switching time for the receiver operation mode
• Default setting: The AV amplifier operation mode is not switched automatically.
   After pressing SOURCE CONTROL to operate another device, you need to press MAIN RECEIVER to switch the mode to receiver operation mode to operate this unit.
You can set to automatically switch to AV amplifier operation mode when a certain period of time elapses after remote operation of each input function is finished. See Setting the switching time for the receiver operation mode on page 99.
1. Press and hold RCU SETUP, then press ‘5’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
2. Press the number buttons of the time you wish to set.
   • 1 – The mode is not automatically switched to AV amplifier operation mode.
   • 2 – Switches in five minute.
   • 3 – Switches in three minute.
   • 4 – Switches in one minute.
   • 5 – Switches in 30 seconds.
3. Press RCU SETUP to exit the setup.

Resetting the remote control settings
Use this procedure to reset all the remote control’s settings to the factory default.
• When preset codes are set, all the signals learned in the input function buttons are cleared. This function is convenient when you want to reset some but not all of input function buttons.
1. Press and hold RCU SETUP, then press ‘0’ for three seconds.
   Release the button after the LED flashes once. The LED continues to flash.
2. Hold down the ENTER button for five seconds.
   If the LED lights for one second, the erasing has been successfully completed.

Making receiver settings from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu

The MCACC PRO/Advanced MCACC (Multi Channel ACoustic Calibration) system was developed in Pioneer’s laboratories with the aim of making it possible for home users to perform adjustments of the same level as in a studio easily and with high precision. The acoustic characteristics of the listening environment are measured and the frequency response is calibrated accordingly to allow high precision, automatic analysis and optimal calibration of the sound field to bring it closer to a studio environment than ever before. Furthermore, while it was previously difficult to eliminate standing waves, this receiver is equipped with a standing wave control function using a unique process to perform acoustic analysis and reduce their influence. This section describes how to calibrate the sound field automatically and fine-adjust the sound field data manually.

1 Press STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.

2 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU. A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
   - Press HOME MENU at any time to exit the HOME MENU.

3 Select ‘MCACC PRO’ (VSX-90)/‘Advanced MCACC’ (VSX-45) from the HOME MENU, then press ENTER.

4 Select the setting you want to adjust.
   - Full Auto MCACC – See Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61 for a quick and effective automatic surround setup.
   - Auto MCACC – See Automatic MCACC (Expert) on page 103 for a more detailed MCACC setup.
   - MCACC Data Check – This displays the Advanced MCACC measurement results. Use it to check the MCACC memory. For details, see Checking MCACC Data on page 107.
   - Data Management – Use this to manage the data in the MCACC memory. For details, see Data Management on page 116.
   - Demo – No settings are saved and no errors occur. When the speakers are connected to this receiver, the test tone is output repeatedly. Press RETURN to cancel the test tone.

Automatic MCACC (Expert)

If your setup requires more detailed settings than those provided in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61, you can customize your setup options below. You can calibrate your system differently for up to six different MCACC presets, which are useful if you have different listening positions depending on the type of source (for example, watching movies from a sofa, or playing a video game close to the TV).

Important
- Make sure the microphone/speakers are not moved during the Auto MCACC Setup.
- The screen saver will automatically appear after five minutes of inactivity.

CAUTION
- The test tones used in the Auto MCACC Setup are output at high volume.

1 Select ‘Auto MCACC’ from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu, then press ENTER.

2 Select the parameters you want to set.
   - Auto MCACC – The default is ALL (recommended), but you can limit the system calibration to only one setting (to save time) if you want.
     - When data measurement is taken (after selecting ALL or Keep SP System), the reverber characteristics data (both before- and after-calibration) that this receiver had been storing will be overwritten.
     - When measurement is performed with other than SYMMETRY (after selecting ALL or Keep SP System), the reverberation characteristics after calibration cannot be predicted, so the graph for the characteristics after calibration (“After”) cannot be displayed. If you will need to display the graph for the characteristics after calibration (“After”), take the measurement using the EQ Professional menu in the Manual MCACC setup (page 103).
     - The EQ Pro & S-Wave measurement is also taken when ALL or Keep SP System is selected. See Acoustic Calibration EQ Professional on page 106 for more on this.
     - Either effect of Acoustic Calibration EQ Professional and Standing Wave can be switched on and off in the respective MCACC preset. For details, see Setting the Audio options on page 80.
   - EQ Type (only available when the Auto MCACC Menu above is EQ Pro & S-Wave) – This determines how the frequency balance is adjusted. After a single calibration is performed, each of the following three correction curves can be stored separately in the MCACC memory.
     - SYMMETRY implements symmetric correction for each pair of left and right speakers to flatten the frequency-amplitude characteristics.
     - ALL CH ADJ is a ‘flat’ setting where all the speakers are set individually so no special weighting is given to any one channel.
     - FRONT ALIGN sets all speakers in accordance with the front speaker settings (no equalization is applied to the front left and right channels).

If you select ALL or Keep SP System as your Auto MCACC menu, you can specify the MCACC preset where you want to save the SYMMETRY, ALL CH ADJ and FRONT ALIGN settings. EQ of subwoofer is automatically set when in AUTO MCACC setup (page 105).

2nd reference point
3rd reference point
Main listening position

2nd reference point
3rd reference point
Main listening position
• Dolby Enabled Speaker (VSX-90 only). It can be set only when ALL and Speaker Setting are selected for Auto MCACC. If Auto MCACC is not used, select NO (page 25).
• SP to ceiling (VSX-90 only). When setting to use the Dolby Enabled Speaker, using Auto MCACC, you can perform the settings when ALL, Keep SP System, and Channel Level & Speaker Distance are selected: Input the vertical distance from the speaker to the ceiling when using a Dolby Enabled Speaker (page 25).

3 Connect the microphone to the MCACC SETUP MIC jack on the front panel. Make sure there are no obstacles between the speakers and the microphone.

If you have a tripod, use it to place the microphone so that it’s about ear level at your normal listening position. If you do not have a tripod, use some other object to install the microphone.
• It may not be possible to measure correctly if the microphone is placed on a table, sofa, etc.

4 When you’re finished setting the options, select START then press ENTER.

5 Follow the instructions on-screen.

6 Wait for the Auto MCACC Setup to finish outputting test tones.
A progress report is displayed on-screen while the receiver outputs test tones to determine the speakers present in your setup. Try to be as quiet as possible while it’s doing this.
• With error messages (such as Too much ambient noise! or Check microphone.), select RETRY after checking for ambient noise (see Problems when using the Auto MCACC Setup on page 60) and verifying the microphone connection. If there doesn’t seem to be a problem, you can simply select GO NEXT and continue.
• Do not adjust the volume during the test tones. This may result in incorrect speaker settings.

7 If necessary, confirm the speaker configuration in the GUI screen.
The configuration shown on-screen should reflect the actual speakers you have.
If no operations are performed for 10 seconds while the speaker configuration check screen is being displayed, the Auto MCACC Setup will resume automatically. In this case, you don’t need to select ‘OK’ and press ENTER in step 8.
• If you see an ERR message (or the speaker configuration displayed isn’t correct), there may be a problem with the speaker connection. If selecting RETRY doesn’t work, turn off the power and check the speaker connections. If there doesn’t seem to be a problem, you can simply use ↑↓←→ to change the setting and continue.
• If the speaker is not pointed to the microphone (listening position) or when using speakers that affect the phase (dipole speakers, reflective speakers, etc.), Reverse Phase may be displayed even if the speakers are properly connected.

If Reverse Phase is displayed, the speaker’s wiring (+ and –) may be inverted. Check the speaker connections.
— If the connections were wrong, turn off the power, disconnect the power cord, then reconnect properly.
— After this, perform the Auto MCACC procedure again.
— If the connections were right, select GO NEXT and continue.

8 Make sure ‘OK’ is selected, then press ENTER.
A progress report is displayed on-screen while the receiver outputs more test tones to determine the optimum receiver settings.
Again, try to be as quiet as possible while this is happening. It may take 3 to 7 minutes.
• If you selected a STAND.WAVE Multi-Point setup (in step 2), you will be asked to place the mic at the 2nd and 3rd reference points before finally placing it at your main listening position.

9 The Auto MCACC Setup procedure is completed and the Advanced MCACC menu reappears automatically.
The settings made in the Auto MCACC Setup should give you excellent surround sound from your system, but it is also possible to adjust these settings manually using the Manual MCACC menu (starting below) or the Manual SP Setup menu (starting on page 110).
• Depending on the characteristics of your room, sometimes identical speakers with cone sizes of around 12 cm (5 inches) will end up with different size settings. You can correct the setting manually using the Manual speaker setup on page 110.
• The subwoofer distance setting may be farther than the actual distance from the listening position. This setting should be accurate (taking delay and room characteristics into account) and generally does not need to be changed.
• If Auto MCACC Setup measurement results are incorrect due to the interaction of the speakers and viewing environment, we recommend adjusting the settings manually.
You can also choose to view the settings by selecting individual parameters from the MCACC Data Check screen (see Checking MCACC Data on page 107). Press RETURN after you have finished checking each screen. When you’re finished, select RETURN to go back to the HOME MENU.
Be sure to disconnect the microphone from this receiver upon completion of the Auto MCACC Setup.
Manual MCACC setup

You can use the settings in the Manual MCACC setup menu to make detailed adjustments when you’re more familiar with the system. Before making these settings, you should have already completed Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61.

You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers).

**CAUTION**
- The test tones used in the Manual MCACC setup are output at high volume.

**Important**
- Press the MCACC button while the pertinent setup screens are displayed to select MCACC presets.
- For some of the settings below, you’ll have to connect the setup microphone to the front panel and place it about ear level at your normal listening position. Press HOME MENU to display the HOME MENU before you connect the microphone to this receiver.
- See Problems when using the Auto MCACC Setup on page 62 for notes regarding high background noise levels and other possible interference.
- If you’re using a subwoofer, switch it on and turn up the volume to the middle position.

**1 Select ‘Manual MCACC’ from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu, then press ENTER.**

See Making receiver settings from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu on page 103 if you’re not already at this screen.

**2 Select the setting you want to adjust.**

If you’re doing this for the first time, you might want to make these settings in order.
- **Fine Channel Level** – Make fine adjustments to the overall balance of your speaker system (see Fine Channel Level on page 106).
- **Fine SP Distance** – Make precise delay settings for your speaker system (see Fine Speaker Distance on page 106).
- **Standing Wave** – Control overly resonant low frequencies in your listening room (see Standing Wave on page 106).

The last two settings are specifically for customizing the parameters explained in Acoustic Calibration EQ Adjust on page 106:
- **EQ Adjust** – Manually adjust the frequency balance of your speaker system while listening to test tones (see Acoustic Calibration EQ Adjust on page 106).
- **EQ Professional** – Calibrate your system based on the direct sound coming from the speakers and make detailed settings according to your room’s reverb characteristics (see Acoustic Calibration EQ Professional on page 106).

**Fine Channel Level**

- Default setting: 0.0 dB (all channels)

You can achieve better surround sound by properly adjusting the overall balance of your speaker system. You can adjust the Channel Level of each speaker in 0.5 dB increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 110.

1 **Select ‘Fine Channel Level’ from the Manual MCACC setup menu.**

The volume increases to the 0.0 dB reference level.

2 **Adjust the level of the left channel.**

This will be the reference speaker level, so you may want to keep the level around 0.0 dB so that you’ll have plenty of room to adjust the other speaker levels.
- After pressing ENTER, test tones will be output.

3 **Select each channel in turn and adjust the levels (+/-12.0 dB) as necessary.**

Use ± to adjust the volume of the speaker you selected to match the reference speaker. When it sounds like both tones are the same volume, press ↓ to confirm and continue to the next channel.
- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use ↑ / ↓ to select it.

4 **When you’re finished, press RETURN.**

You will return to the Manual MCACC setup menu.

**Fine Speaker Distance**

- Default setting: 10"00" (all speakers)

For proper sound depth and separation with your system, it is necessary to add a slight bit of delay to some speakers so that all sounds will arrive at the listening position at the same time. You can adjust the distance of each speaker in half inch increments. The following setting can help you make detailed adjustments that you may not achieve using the Manual speaker setup on page 110.

1 **Select ‘Fine SP Distance’ from the Manual MCACC setup menu.**

2 **Adjust the distance of the left channel from the listening position.**

VSX-90 only: When setting the Dolby Enabled Speaker, input the vertical distance from the speaker to the ceiling and the distance to each Dolby Enabled Speaker from the listening/viewing position. (page 26)

3 **Select each channel in turn and adjust the distance as necessary.**

Use ± to adjust the delay of the speaker you selected to match the reference speaker. (VSX-90 only): If Dolby Enabled Speaker is used, the distance reached by the speaker sound reflected at the ceiling is displayed (page 26.)

Listen to the reference speaker and use it to measure the target channel. From the listening position, face the two speakers with your arms outstretched pointing at each speaker. Try to make the two tones sound as if they are arriving simultaneously at a position slightly in front of you and between your arm span.
- If you can’t seem to achieve this by adjusting the distance setting, you may need to change the angle of your speakers very slightly.
- The subwoofer’s test tone differs in tone from other channels. Adjust so that the sound of the subwoofer can be heard distinctly. Note that when adjusting the subwoofer, depending on the low frequency response of your speaker, it may be difficult to hear the change even when the setting is increased or decreased or when the position of the speaker is changed. Note that it may be difficult to compare this tone with the other speakers in your setup (depending on the low frequency response of the reference speaker).

When it sounds like the delay settings are matched up, press ↓ to confirm and continue to the next channel.
- For comparison purposes, the reference speaker will change depending on which speaker you select.
- If you want to go back and adjust a channel, simply use ↑ / ↓ to select it.

4 **When you’re finished, press RETURN.**

You will return to the Manual MCACC setup menu.
Standing Wave

- Default setting: ON/ATT 0.0dB (all filters)
- Acoustic standing waves occur when, under certain conditions, sound waves from your speaker system resonate mutually with sound waves reflected off the walls in your listening area. This can have a negative effect on the overall sound, especially at certain lower frequencies. Depending on speaker placement, your listening position, and ultimately the shape of your room, it results in an overly resonant (‘boomy’) sound. The Standing Wave Control uses filters to reduce the effect of overly resonant sounds in your listening area. During playback of a source, you can customize the filters used for Standing Wave Control for each of your MCACC presets.
- Standing Wave control filter settings cannot be changed during playback of sources using the HDMI connection.

1 Select ‘Standing Wave’ from the Manual MCACC setup menu.
2 Adjust the parameters for the Standing Wave Control.
   - Filter Channel – Select the channel to which you will apply the filter(s): MAIN (all except center channel and subwoofer), Center or SW (subwoofer).
   - TRIM (only available when the filter channel above is SW) – Adjust the subwoofer channel level (to compensate for the difference in output post-filter).
   - Freq / Q / ATT – These are the filter parameters where Freq represents the frequency you will be targeting and Q is the bandwidth (the higher the Q, the narrower the bandwidth, or range) of the attenuation (ATT, the amount of reduction to the targeted frequency).
3 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Acoustic Calibration EQ Adjust

- Default setting: ON/0.0dB (all channels/bands)
- Acoustic Calibration Equalization is a kind of room equalizer for your speakers (excluding the subwoofer). It works by measuring the acoustic characteristics of your room and neutralizing the ambient characteristics that can color the original source material (providing a ‘flat’ equalization setting). If you’re not satisfied with the adjustment provided in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61 or Automatic MCACC (Expert) on page 103, you can also adjust these settings manually to get a frequency balance that suits your tastes.

1 Select ‘EQ Adjust’ from the Manual MCACC setup menu.
2 Select the channel(s) you want and adjust to your liking.
   - Use ↑ / ↓ to select the channel.
   - Use ← / → to select the frequency and ↑ / ↓ to boost or cut the EQ. When you’re finished, go back to the top of the screen and press ← to return to Ch, then use ↑ / ↓ to select the channel.
   - The OVER! indicator shows in the display if the frequency adjustment is too drastic and might distort. If this happens, bring the level down until OVER! disappears from the display.
3 When you’re finished, press RETURN.

You will return to the Manual MCACC setup menu.

Notes
- Changing the frequency curve of one channel too drastically will affect the overall balance. If the speaker balance seems uneven, you can raise or lower channel levels using test tones with the TRIM feature. Use ← / → to select TRIM, then use ↑ / ↓ to raise or lower the channel level for the current speaker.
- Speaker Setting channels set as SMALL or Dolby Sp at 63Hz cannot be selected.
- The frequencies that can be adjusted by the SW channel are 31Hz, 63Hz, 125Hz and 250Hz.
- Depending on the crossover frequency setting, some frequencies are less effective.

Acoustic Calibration EQ Professional

This setup minimizes the unwanted effects of room reverberation by allowing you to calibrate your system based on the direct sound coming from the speakers. Performing the Acoustic Calibration EQ Professional procedure is effective when the lower frequencies seem overly reverberant in your listening room (i.e. it sounds ‘boomy’) as shown at Type A below, or when different channels seem to exhibit different reverb characteristics as shown at Type B.

- **Type A: Reverberance of high vs. low frequencies**
- **Type B: Reverb characteristics for different channels**

Using Acoustic Calibration EQ Professional

1 Select ‘EQ Professional’, then press ENTER.
2 Select an option and press ENTER.
   - **Reverb Measurement** – Use this to measure the reverb characteristics before and after calibration.
     - **Reverb View** – You can check the reverb measurements made for specified frequency ranges in each channel.
       - If the Reverb View procedure is performed after the Reverb Measurement operation, depending on the standing wave control setting, differences may appear on the reverb graph. With the Auto MCACC function, the reverberations are measured with the standing waves controlled, so the reverb characteristics graph shows the characteristics with the effect of the standing waves eliminated. By contrast, the Reverb Measurement function measures the reverberations without controlling the standing waves. If you wish to check the reverb characteristics of the room itself (with the standing waves as such), we recommend using the Reverb Measurement function.
   - **Advanced EQ Setup** – Use this to select the time period that will be used for frequency adjustment and calibration, based on the reverb measurement of your listening area. Note that customizing system calibration using this setup will alter the settings you made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61 or Automatic MCACC (Expert) on page 103 and is not necessary if you’re satisfied with these settings.
After the Acoustic Calibration Equalization is set, you are given the option to check the settings on-screen. When you're finished, select 40-60ms. Select the setting from the following time periods (in milliseconds):

- 0-20ms
- 20-40ms
- 30-50ms
- 40-50ms
- 50-70ms
- 60-80ms

Use the measurement results as a reference for your time setting. For an optimal system calibration based on the adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use Based on the reverb measurement above, you can choose the time period that will be used for the final frequency setting. After the reverb measurement is finished, you can select Reverb View to see the results on-screen. See Professional Calibration EQ graphical output on page 121 for troubleshooting information.

If 'Advanced EQ Setup' is selected, select the MCACC memory to be stored, then enter the calibration corresponding to the currently selected MCACC preset will be used when EQ ON is selected. To use another MCACC preset, press MCACC to select the MCACC memory you want to store.

After auto calibration with EQ Type: SYMMETRY (Full Auto MCACC, etc.), the graph for the inferred reverb characteristics can be displayed by selecting Reverb View. To display the actually measured reverb characteristics after EQ calibration, measure with EQ ON. When the reverb measurement is finished, you can select Reverb View to see the results on-screen. See Professional Calibration EQ graphical output on page 121 for troubleshooting information.

If you selected ‘Reverb Measurement’, select EQ ON or EQ OFF, and then START. The following options determine how the reverb characteristics of your listening area are displayed in Reverb View:

- EQ OFF – You will see the reverb characteristics of your listening area without the equalization performed by this receiver (before calibration).
- EQ ON – You will see the reverb characteristics of your listening area with the equalization performed by this receiver (after calibration). Note that the EQ response may not appear entirely flat due to adjustments necessary for your listening area.

When the reverb measurement is finished, you can select Reverb View to see the results on-screen. See Professional Calibration EQ graphical output on page 121 for troubleshooting information.

If you selected ‘Reverb View’, you can check the reverb characteristics for each channel. Press RETURN when you're done.

The reverb characteristics are displayed when the Reverb Measurement measurements are conducted. Use ↑/↓ to select the channel, frequency and calibration setting you want to check. Use ↑/↓ to go back and forth between the three. The reverb characteristics graph before and after EQ calibration can be displayed by selecting Calibration Before/After. Note that the markers on the vertical axis indicate decibels in 2 dB steps.

If ‘Advanced EQ Setup’ is selected, select the MCACC memory to be stored, then enter the desired time setting for calibration, and then select START.

- To specify the place where the MCACC memory is to be stored, press MCACC to select the MCACC memory you want to store.

Based on the reverb measurement above, you can choose the time period that will be used for the final frequency adjustment and calibration. Even though you can make this setting without reverb measurement, it is best to use the measurement results as a reference for your setting time. For an optimal system calibration based on the direct sound coming from the speakers, we recommend using the 30-50ms setting. Use ↑/↓ to select the setting. Use ↑/↓ to switch between them. Select the setting from the following time periods (in milliseconds): 0-20ms, 10-30ms, 20-40ms, 30-50ms, 40-50ms, 50-70ms and 60-80ms. This setting will be applied to all channels during calibration.

When you’re finished, select START. It will take about 2 to 4 minutes for the calibration to finish. After the Acoustic Calibration Equalization is set, you are given the option to check the settings on-screen.

Checking MCACC Data

At the procedure of Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61, the procedure of Automatic MCACC (Expert) on page 103 or after fine-adjusting at Manual MCACC setup on page 105, you can check your calibrated settings using the GUI screen.

1 Select ‘MCACC Data Check’ from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu, then press ENTER.

2 Select the setting you want to check.
   - Speaker Setting – Used to check the settings of the speaker systems. See Speaker Setting on page 107 for more on this.
   - Channel Level – Used to check the output level of the different speakers. See Channel Level on page 107 for more on this.
   - Speaker Distance – Used to check the distance to the different speakers. See Speaker Distance on page 107 for more on this.
   - Standing Wave – Used to check the standing wave control filter settings. See Standing Wave on page 108 for more on this.
   - Acoustic Cal EQ – Used to check the calibration values of the listening environment’s frequency response. See Acoustic Cal EQ on page 108 for more on this.

3 Press RETURN to go back to the MCACC Data Check menu, repeating steps 2 and 3 to check other settings.

4 When you’re finished, press RETURN. You will return to the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu.

Speaker Setting

Use this to display the speaker size and number of speakers. See Speaker Setting on page 111 for more on this.

1 Select ‘Speaker Setting’ from the MCACC Data Check menu.

2 Select the channel you want to check.

Use ↑/↓ to select the channel. The corresponding channel on the layout diagram is highlighted.

Channel Level

Use this to display the level of the various channels. See Channel Level on page 112 for more on this.

1 Select ‘Channel Level’ from the MCACC Data Check menu.

2 When ‘MCACC’ is highlighted, use ↑/↓ to select the MCACC preset you want to check. The level of the various channels set at the selected MCACC preset is displayed. ‘—’ is displayed for channels that are not connected.

Speaker Distance

Use this to display the distance from the different channels to the listening position. See Speaker Distance on page 112 for more on this.

1 Select ‘Speaker Distance’ from the MCACC Data Check menu.

2 When ‘MCACC’ is highlighted, use ↑/↓ to select the MCACC preset you want to check. The distance from the various channels set at the selected MCACC preset is displayed. ‘—’ is displayed for channels that are not connected.
Standing Wave
Use this to display the standing wave related adjustment values for the various MCACC memories. See Standing Wave on page 106 for more on this.
1 Select ‘Standing Wave’ from the MCACC Data Check menu.
2 When ‘Channel’ is highlighted, use ↑/↓ to select the channel for which you want to check standing wave control.
   The standing wave related calibration value for the selected channel stored at the selected MCACC preset and its graph are displayed.
3 Press ← to highlight ‘MCACC’, then use ↑/↓ to select the MCACC preset you want to check.

Acoustic Cal EQ
Use this to display the calibration values for the frequency response of the various channels set in the different MCACC presets. See Acoustic Calibration EQ Adjust on page 106 for more on this.
1 Select ‘Acoustic Cal EQ’ from the MCACC Data Check menu.
2 When ‘Ch’ is highlighted, use ↑/↓ to select the channel.
The calibration value for the frequency response of the selected channel stored at the selected MCACC preset and its graph are displayed.
3 Press ← to highlight ‘MCACC’, then use ↑/↓ to select the MCACC preset you want to check.

Group Delay
Use this to display the calibrated speaker group delay results. See Better sound using Phase Control on page 78 for more on this.
1 Select ‘Group Delay’ from the MCACC Data Check menu.
2 When ‘Channel’ is highlighted, use ←/→ to select the channel you want to check.
The result of group delay calibration for the selected channel is displayed. When measurements have been performed with Full Auto MCACC selected at Advanced MCACC or with ALL or Full Band Phase Ctrl selected when Auto MCACC is selected, the graph before group delay calibration is also displayed.
When After is selected at Calibration, the group delay filter after calibration is displayed. Compared to when Before is selected, with After there is less difference in the delay between frequency bands and the group delay between the different channels is uniform, allowing you to check the full band phase control effect.
No Data is displayed if the selected group delay has not been measured.

Data Management
This system allows you to store up to six MCACC presets, allowing you to calibrate your system for different listening positions (or frequency adjustments for the same listening position). This is useful for alternate settings to match the kind of source you’re listening to and where you’re sitting (for example, watching movies from a sofa, or playing a video game close to the TV).
From this menu you can copy from one preset to another, name presets for easier identification and clear any ones you don’t need.
• This can be done in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61, Automatic MCACC (Expert) on page 103, either of which you should have already completed.
1 Select ‘Data Management’ from the MCACC PRO (VSX-90)/Advanced MCACC (VSX-45) menu, then press ENTER.

2 Select the setting you want to adjust.
• Memory Rename – Name your MCACC presets for easy identification (see Renaming MCACC presets on page 108).
• MCACC Memory Copy – Copy settings from one MCACC preset to another (see Copying MCACC preset data on page 108).
• MCACC Memory Clear – Clear any MCACC presets that you don’t want (see Clearing MCACC presets on page 108).

Renaming MCACC presets
If you have several different MCACC presets that you’re using, you may want to rename them for easier identification.
1 Select ‘Memory Rename’ from the Data Management setup menu.
2 Select the MCACC preset you want to rename, then select an appropriate preset name.
   Use ↑/↓ to select the preset, then ←/→ to select a preset name.
3 Repeat for as many MCACC presets as necessary, then press RETURN when you’re finished.

Copying MCACC preset data
If you want to manually adjust the Acoustic Calibration EQ (see Manual MCACC setup on page 105), we recommend copying your current settings to an unused MCACC preset. Instead of just a flat EQ curve, this will give you a reference point from which to start.
• The settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61 or Automatic MCACC (Expert) on page 103.
1 Select ‘MCACC Memory Copy’ from the Data Management setup menu.
2 Select the setting you want to copy.
   • All Data – Copies all the settings of the selected MCACC preset memory.
   • Level & Distance – Copies only the channel level and speaker distance settings of the selected MCACC preset memory.
3 Select the MCACC preset you’ll be copying the settings ‘From’, then specify where you want to copy them ‘To’.
   Make sure you don’t overwrite an MCACC preset you’re currently using (this can’t be undone).
   Completed! shows in the GUI screen to confirm the MCACC preset has been copied, then you automatically return to the Data Management setup menu.

Clearing MCACC presets
If you are no longer using one of the MCACC presets stored in memory, you can choose to clear the calibration settings of that preset.
1 Select ‘MCACC Memory Clear’ from the Data Management setup menu.
2 Select the MCACC preset you want to clear.
   Make sure you don’t clear an MCACC preset you’re currently using (this can’t be undone).
3 Select ‘OK’ to confirm and clear the preset.
   When MCACC Memory Copy? is displayed, select YES. If NO is selected, the memory is not copied. Completed! shows in the GUI screen to confirm the MCACC preset has been cleared, then you automatically return to the Data Management setup menu.

Making receiver settings from the System Setup menu

The following section describes how to change the speaker-related settings manually and make various other settings (input selection, OSD language selection, etc.).

- With factory default settings, the on-screen display will be output from all HDMI output terminals and displayed on any TV connected via HDMI cable.

**VSX-90** only: You can change where the screen is output in the MAIN/HDZONE (page 116) and HDMI output (page 72) settings.

1. Press ⚫ STANDBY/ON to switch on the receiver and your TV. Make sure that the TV’s video input is set to this receiver.

2. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.

A Graphical User Interface (GUI) screen appears on your TV. Use ‹ / › / ◀ / ▶ and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.

- Press HOME MENU at any time to exit the HOME MENU.

3. Select ‘System Setup’ from the HOME MENU, then press ENTER.

4. Select the setting you want to adjust.

- Input Setup – Specifies what you’ve connected to the digital, HDMI and component video inputs (see **The Input Setup menu on page 62**). See Making receiver settings from the System Setup menu on page 110 if you’re not already at this screen.

- HDMI Setup – Synchronizes this receiver with your Pioneer component supporting Control with HDMI (page 63).

- Manual SP Setup – Sets the type of connection used for surround back terminals and the size, number distance and overall balance of the connected speakers (see **Manual speaker setup** on page 112).

- OSD Language – The GUI screen’s display language can be changed (see **Changing the OSD display language (OSD Language)** on page 64).

- Other Setup – Makes customized settings to reflect how you are using the receiver (see **The Other Setup menu on page 113**).

**Manual speaker setup**

This receiver allows you to make detailed settings to optimize the surround sound performance. You only need to make these settings once (unless you change the placement of your current speaker system or add new speakers). These settings are designed to customize your system, but if you’re satisfied with the settings made in **Automatically conducting optimum sound tuning (Full Auto MCACC)** on page 61, it isn’t necessary to make all of these settings.

**CAUTION**

- The test tones used in the Manual SP Setup are output at high volume.

1. Select ‘Manual SP Setup’, then press ENTER.

2. Select the setting you want to adjust.

If you are doing this for the first time, you may want to adjust these settings in order:

- **Speaker System** – Specifies how you are using your surround back speaker terminals and B speaker terminals (page 110).

- **Speaker Setting** – Specifies the size and number of speakers you’ve connected (page 111).

- **Channel Level** – Adjusts the overall balance of your speaker system (page 112).

- **Speaker Distance** – Specifies the distance of your speakers from the listening position (page 112).

- **X-Curve** – Adjusts the tonal balance of your speaker system for movie soundtracks (page 112).

3. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

**Speaker system setting**

In case of VSX-90

- Default setting: 7.2ch/5.2.2ch

This receiver can be used for various applications such as surround back terminal and top middle speaker terminal. Here, application for these terminals are set. Select from the following items.

1. Select ‘Speaker System’ from the Manual SP Setup menu.

2. Select the speaker system setting.

- 7.2ch/5.2.2ch – Select when connecting surround back or top middle speaker and playing a maximum 7.2 ch surround.

- 7.2ch SB/FW – Select when connecting surround back or front wide speaker and playing a maximum 7.2 ch surround.

- Speaker B – Select to use the B speaker terminals to listen to stereo playback in another room (see **Switching the speaker terminals on page 92**).

- Front Bi-Amp – Select this setting if you’re bi-amping your front speakers (see **Bi-amping your speakers on page 27**).

- ZONE 2 – Select to use the surround back speaker terminals for an independent system in another zone (see **Using the MULTI-ZONE controls on page 93**).

- HDZONE – Select to use the surround back speaker terminals for an independent system in HDZONE (see **Using the MULTI-ZONE controls on page 93**).

3. If you selected 7.2ch/5.2.2ch, 7.2ch SB/FW, or Speaker B in Step 2, select the placement of the surround speakers.

In a 7.2-channel surround system with surround speakers placed directly at the sides of the listening position, the surround sound of 5.1-channel sources is heard from the side. This function mixes the sound of the surround speakers with the surround back speakers so that the surround sound is heard from diagonally to the rear as it should be.

Depending on the positions of the speakers and the sound source, in some cases it may not be possible to achieve good results. In this case, set the setting to ON SIDE or IN REAR.

- **ON SIDE** – Select when the surround speakers is positioned obliquely behind you.

- **IN REAR** – Select when the surround speaker is positioned right beside you.

4. When ‘Setting Change?’ is displayed, select Yes.

If **No** is selected, the setting is not changed. You will return to the Manual SP Setup menu.

---

**Image 803x351 to 838x386**
In case of VSX-45

- Default setting: 5.2ch

1. Select ‘Speaker System’ from the Manual SP Setup menu.

2. Select the speaker system setting.
   - 5.2ch: Select when connecting surround speaker and playing a maximum 5.2ch surround.
   - Front Bi-Amp: Select this setting if you’re bi-amping your front speakers (see "Bi-amping your speakers on page 43").

3. When ‘Setting Change?’ is displayed, select Yes.

You will return to the Manual SP Setup menu.

In case of VSX-90

Use this setting to specify your speaker configuration (size, number of speakers and crossover frequency). It is a good idea to make sure that the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61 are correct. Note that this setting applies to all MCACC presets, and cannot be set independently.

1. Select ‘Speaker Setting’ from the Manual SP Setup menu.

2. Choose the set of speakers that you want to set, then select a speaker size.

   - Use \rightarrow to select the size (and number) of each of the following speakers:
     - SW – LFE signals and bass frequencies of channels set to SMALL are output from the subwoofer when YES is selected. Choose the PLUS setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are also routed to the subwoofer). If you did not connect a subwoofer choose NO (the bass frequencies are output from other speakers).
     - Front: Select LARGE if your front speakers reproduce bass frequencies effectively, or if you didn’t connect a subwoofer. Select SMALL to send the bass frequencies to the subwoofer.
     - Center: Select LARGE if your center speaker reproduces bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a center speaker, choose NO (the center channel is sent to the front speakers).
     - Dolby Sp (Front): Select LARGE if your top middle speakers reproduce bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer.
     - Dolby Sp (Surr): Choose the PLUS setting if you want the surround back speakers to automatically be set to LARGE and you want deeper bass (the bass frequencies that would normally come out the surround back speakers are also routed to the subwoofer). If you did not connect surround back speakers choose NO. If you select NO for the subwoofer, the front speakers will automatically be fixed to LARGE. Also, the center, top middle, surround back and front wide speakers can’t be set to SMALL. In this case, all bass frequencies are sent to the subwoofer.
     - Dolby Sp (Surr): Select LARGE if your surround speakers reproduce bass frequencies effectively. Select SMALL to route all the bass sounds to the subwoofer if your surround speakers are set to NO.

3. Select ‘X. OVER’ and set the crossover frequency.

   Frequencies below this point will be sent to the subwoofer (or LARGE speakers).
   - This setting decides the cutoff between bass sounds playing back from the speakers selected as LARGE, or the subwoofer, and bass sounds playing back from those selected as SMALL. It also decides where the cutoff will be for bass sounds in the LFE channel.
   - When Full Auto MCACC setup or Advanced MCACC setup (ALL or Speaker Setting), the setting here will not apply and the crossover frequency will be automatically set. Crossover frequency is a frequency aimed at achieving the optimal sound field taking into account the bass capacity of all connected speakers and human aural characteristics.

4. When you’re finished, press RETURN.

You will return to the Manual SP Setup menu.

In case of VSX-45

Use this setting to specify your speaker configuration (size, number of speakers and crossover frequency). It is a good idea to make sure that the settings made in Automatically conducting optimum sound tuning (Full Auto MCACC) on page 61 are correct. Note that this setting applies to all MCACC presets, and cannot be set independently.

1. Select ‘Speaker Setting’ from the Manual SP Setup menu.

2. Choose the set of speakers that you want to set, then select a speaker size.

   - Use \rightarrow to select the size (and number) of each of the following speakers:
     - SW – LFE signals and bass frequencies of channels set to SMALL are output from the subwoofer when YES is selected. Choose the PLUS setting if you want the subwoofer to output bass sound continuously or you want deeper bass (the bass frequencies that would normally come out the front and center speakers are also routed to the subwoofer). If you didn’t connect a subwoofer choose NO (the bass frequencies are output from other speakers).
     - Front: Select LARGE if your front speakers reproduce bass frequencies effectively, or if you didn’t connect a subwoofer. Select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect front wide speakers, choose NO (the front wide channel is sent to the front speakers).
     - Center: Select LARGE if your center speaker reproduces bass frequencies effectively, or if you didn’t connect a center speaker, choose NO (the center channel is sent to the front speakers).
     - Top middle: Select LARGE if your top middle speakers reproduce bass frequencies effectively, or select SMALL to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a top middle speaker, choose NO (the bass frequencies are output from other speakers).
     - Surround: Select LARGE if your surround speakers reproduce bass frequencies effectively. Select SMALL to route all the bass sounds to the subwoofer if your surround speakers are set to NO.
     - Surround back: Select LARGE if your surround back speakers reproduce bass frequencies effectively. Select SMALL to route all the bass sounds to the subwoofer if your surround back speakers are set to NO.

3. Select ‘X. OVER’ and set the crossover frequency.

   Frequencies below this point will be sent to the subwoofer (or LARGE speakers).
   - This setting decides the cutoff between bass sounds playing back from the speakers selected as LARGE, or the subwoofer, and bass sounds playing back from those selected as SMALL. It also decides where the cutoff will be for bass sounds in the LFE channel.
   - When Full Auto MCACC setup or Advanced MCACC setup (ALL or Speaker Setting), the setting here will not apply and the crossover frequency will be automatically set. Crossover frequency is a frequency aimed at achieving the optimal sound field taking into account the bass capacity of all connected speakers and human aural characteristics.

4. When you’re finished, press RETURN.

You will return to the Manual SP Setup menu.
• **Center** – Select **LARGE** if your center speaker reproduces bass frequencies effectively, or select **SMALL** to send bass frequencies to the other speakers or subwoofer. If you didn’t connect a center speaker, choose **NO** (the center channel is sent to the front speakers).

• **Surr** – Select **LARGE** if your surround speakers reproduce bass frequencies effectively. Select **SMALL** to send bass frequencies to the other speakers or subwoofer. If you didn’t connect surround speakers choose **NO** (the sound of the surround channels is sent to the front speakers or a subwoofer).

If you select **NO** for the subwoofer, the front speakers will automatically be fixed to **LARGE**. Also, the center and surround speakers can’t be set to **LARGE** if the front speakers are set to **SMALL**. In this case, all bass frequencies are sent to the subwoofer.

3 Select ‘X. OVER’ and set the crossover frequency.

Frequencies below this point will be sent to the subwoofer (or **LARGE** speakers).

• This setting decides the cutoff between bass sounds playing back from the speakers selected as **LARGE**, or the subwoofer, and bass sounds playing back from those selected as **SMALL**. It also decides where the cutoff will be for bass sounds in the LFE channel.

• With **Full Auto MCACC** setup or **Auto MCACC** setup (**ALL** or **Speaker Setting**), the setting here will not apply and the crossover frequency will be automatically set. Crossover frequency is a frequency aimed at achieving the optimal sound field taking into account the bass capacity of all connected speakers and human aural characteristics.

4 When you’re finished, press **RETURN**.

You will return to the **Manual SP Setup** menu.

**Channel Level**

Using the channel level settings, you can adjust the overall balance of your speaker system, an important factor when setting up a home theater system.

1 Select ‘Channel Level’ from the **Manual SP Setup** menu.

The test tones will start.

2 Adjust the level of each channel using <–/>.

Use ↑/↓ to switch speakers.

- If you are using a Sound Pressure Level (SPL) meter, take the readings from your main listening position and adjust the level of each speaker to 75 dB SPL (C-weighting/slow reading).

3 When you’re finished, press **RETURN**.

You will return to the **Manual SP Setup** menu.

**Speaker Distance**

For good sound depth and separation from your system, you need to specify the distance of your speakers from the listening position. (When Dolby Enabled Speaker is used, specify the distance reached by the speaker sound reflected at the ceiling.) The receiver can then add the proper delay needed for effective surround sound.

1 Select ‘Speaker Distance’ from the **Manual SP Setup** menu.

2 Adjust the distance of each speaker using <–/>.

You can adjust the distance of each speaker in 1/2 inch increments.

3 When you’re finished, press **RETURN**.

You will return to the **Manual SP Setup** menu.

**Note**

For best surround sound, make sure the surround back speakers are the same distance from the listening position.

---

**X-Curve**

Most soundtracks mixed for cinema sound too bright when played back in large rooms. The X-Curve setting acts as a kind of re-equalization for home theater listening, and restores proper tonal balance of movie soundtracks.

1 Select ‘X-Curve’ from the **Manual SP Setup** menu.

2 Choose the X-Curve setting you want.

Use <-/> to adjust the setting. The X-Curve is expressed as a downwards slope in decibels per octave, starting at 2 kHz. The sound becomes less bright as the slope increases (to a maximum of **–3.0 dB/oct**). Use the following guidelines to set the X-Curve according to your room size:

<table>
<thead>
<tr>
<th>Room size (ft²)</th>
<th>≤400</th>
<th>≤550</th>
<th>≤650</th>
<th>≤800</th>
<th>≤3200</th>
<th>≤12000</th>
</tr>
</thead>
<tbody>
<tr>
<td>X-Curve (dB/oct)</td>
<td>–0.5</td>
<td>–1.0</td>
<td>–1.5</td>
<td>–2.0</td>
<td>–2.5</td>
<td>–3.0</td>
</tr>
</tbody>
</table>

- If you select OFF, the frequency curve will be flat and the X-Curve has no effect.

3 When you’re finished, press **RETURN**.

**MHL Setup**

Select whether or not to switch the input automatically to the MHL input when an MHL-compatible device is connected.

- **Default setting:** **ON**

1 Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press **HOME MENU**.

A Graphical User Interface (GUI) screen appears on your TV. Use ↑/↓/←/→ and **ENTER** to navigate through the screens and select menu items. Press **RETURN** to exit the current menu.

- Press **HOME MENU** at any time to exit the **HOME MENU**.

2 Select ‘System Setup’ from the **HOME MENU**, then press **ENTER**.

3 Select ‘MHL Setup’ from the **System Setup** menu.

4 Select the ‘Auto input switching’ from the **MHL Setup** menu.

5 Use <-/> to select the setting.

- **OFF** – Does not automatically switch to MHL input.
- **ON** – Automatically switches to MHL input.

6 Select ‘OK’, then press **ENTER**.

**Notes**

- This is only valid for MHL-compatible devices supporting this function.
- When the power is on, the MHL-compatible device is charged. (This receiver supports charging of devices up to 0.9 A.)
The Other Setup menu

The Other Setup menu is where you can make customized settings to reflect how you are using the receiver.

1. Press MAIN RECEIVER to switch the remote control to the receiver operation mode, and then press HOME MENU.
   A Graphical User Interface (GUI) screen appears on your TV. Use ↑ / ↓ / ← / → and ENTER to navigate through the screens and select menu items. Press RETURN to exit the current menu.
2. Select ‘System Setup’ from the HOME MENU.
3. Select ‘Other Setup’, then press ENTER.
4. Select the setting you want to adjust.
   If you are doing this for the first time, you may want to adjust these settings in order:
   - Auto Power Down – Sets the power to turn off automatically when the receiver is not being used (page 113).
   - Volume Setup – Sets up the volume-related operations of this receiver (page 113).
   - Software Update – Use to update the receiver’s software and check the version (page 113).
   - On Screen Display Setup (VSX-90 only) – Sets whether or not to display the status on the display when the receiver is operated (page 114).
   - Remote Control Mode Setup (VSX-90 only) – Sets this receiver’s remote control mode (page 114).
   - ZONE Setup (VSX-90 only) – Use to make the sub zone-related settings (page 116).
5. Make the adjustments necessary for each setting, pressing RETURN to confirm after each screen.

Auto Power Down

The power can be set to turn off automatically if no operation has been performed for a specific amount of time with no audio or video signals being input to the receiver.

VSX-90 only: When using ZONE 2 and HDZONE, you can also configure the power of ZONE 2 and HDZONE to turn off. In the case of ZONE 2 and HDZONE, you can automatically have the power turn off once a set amount of time has elapsed even if there is signal input and user operations. In the main zone, ZONE 2 and HDZONE, you can configure the time of each separately.

1. Select ‘Auto Power Down’ from the Other Setup menu.
2. Select the zone you want to set and set the time after which the power turns off.
   - MAIN – The time can be selected from among “15 min”, “30 min”, “60 min” and “OFF”. The power turns off after there has been no signal and no operation for the selected time.
   - ZONE 2 (VSX-90 only) – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.
   - HDZONE (VSX-90 only) – The time can be selected from among “30 min”, “1 hour”, “3 hours”, “6 hours”, “9 hours” and “OFF”. The power turns off after the selected time.

Notes

- Depending on the connected devices, the Auto Power Down function may not work properly due to excessive noise or other reasons.
- When using WAC mode (page 57), this feature does not work.

Volume Setup

You can set the maximum volume of this receiver or specify what the volume level will be when the power is turned on.

1. Select ‘Volume Setup’ from the Other Setup menu.
2. Select the Power ON Level setting you want.
   - The volume can be set so that it is always set to the same level when the power is turned on.
     - LAST (default) – When the power is turned on, the volume is set to the last level that was in use.
     - “OFF” – When the power is turned on, the volume is set to minimum level.
   - -80.0dB to +12.0dB – Specify the volume to be set when the power is turned on, in steps of 0.5 dB.
   - It is not possible to set a volume level greater than the value specified at Volume Limit setup (see below).
3. Select the Volume Limit setting you want.
   Use this function to limit the maximum volume. The volume cannot be increased above the level set here even by operating VOLUME button (or the dial on the front panel).
   - OFF (default) – The maximum volume is not limited.
   - -20.0dB – -15.0dB – -10.0dB – -5.0dB – 0.0dB – The maximum volume is limited to the value set here.
4. Select the Mute Level setting you want.
   This sets how much the volume is to be turned down when MUTE is pressed.
   - FULL (default) – No sound.
   - -40.0dB – -20.0dB – The volume will be turned down to the level specified here.
5. When you’re finished, press RETURN.
   You will return to the Other Setup menu.

Software Update

Use this procedure to update the receiver’s software and check the version. There are two ways to update: via the Internet and via a USB memory device.

Updating via the Internet is performed by accessing the file server from the receiver and downloading the file. This procedure is only possible if the receiver is connected to the Internet.

Updating via a USB memory device is performed by downloading the update file from a computer, reading this file onto a USB memory device then inserting this USB memory device into the USB port on the receiver’s front panel. With this procedure, the USB memory device containing the update file must first be inserted into the USB port on the receiver’s front panel.

- If an update file is provided on the Pioneer website, download it onto your computer. When downloading an update file from the Pioneer website onto your computer, the file will be in ZIP format. Unzip the ZIP file before saving it on the USB memory device. If there are any old downloaded files or downloaded files for other models on the USB memory device, delete them.

http://www.pioneer-electronics.com

- If an update file does not exist on the Pioneer’s website, updating the software for the receiver is not necessary.

Important

- DO NOT unplug the power cord during updating.
- When updating via the Internet, do not disconnect the LAN cable. When updating via a USB memory device, do not disconnect the USB memory device.
- If updating is interrupted before it is completed, start updating over from the beginning.
- The receiver’s settings may be reset when the software is updated. Information on the models for which the settings are reset is provided on the Pioneer website. Check the website before updating.
Remote Control Mode Setup

**VSX-90 only**

- **Default setting:** 1
  - This sets this receiver’s remote control mode to prevent erroneous operation when multiple units of the receiver are being used.

1. Select ‘Remote Control Mode Setup’ from the Other Setup menu.
2. Select the Remote Control Mode setting you want.
3. Select ‘OK’ to change the remote control mode.
4. Follow the instructions on the screen to change the remote control’s setting.
   - See [Operating multiple receivers](page 97).
5. When you’re finished, press RETURN.
   - You will return to the Other Setup menu.

ZONE Setup

**VSX-90 only**

Switches the sub-zone setting.

1. Select ‘ZONE Setup’ from the Other Setup menu.
2. Select ‘MAIN/HDZONE’, then press ENTER.
3. Set the usage of the HDMI OUT 2 terminal.
   - **MAIN**: Select this to output the same input source as in the main zone. After setting this to MAIN, exit the home menu, then press OUT P, and select the terminal for HDMI output (page 93).
   - **HDZONE** (default): Use the HDMI output’s multizone function (HDZONE) to output an input source different from the one in the main zone (page 93).
4. Select ‘OK’, then press ENTER.
5. When you’re finished, press RETURN.
   - You will return to the Other Setup menu.

ZONE 2 setup

When making multi-zone connections using the AUDIO ZONE 2 OUT terminals and performing playback in Zone 2, you can set whether to adjust the Zone 2 volume on the receiver or to fix it to a specific volume (–40 dB Fixed or 0 dB Fixed). This is set to Variable upon shipment from the factory, allowing the volume to be adjusted on the receiver. If you would like to adjust the volume from the connected amplifier, make the setting below.

- **This setting is not possible if multi-zone settings have been made using the speaker terminals and Speaker System is set to anything other than ZONE 2.** In this case, adjust the volume for the sub zones on the receiver.

**CAUTION**

- Note that when Volume Level is set to 0 dB Fixed, the audio output from the AUDIO ZONE 2 OUT terminals is set to the maximum. Also, depending on the volume setting on the connected amplifier, large volumes may be produced even when Volume Level is set to −40 dB Fixed.

1. Select ‘ZONE Setup’ from the Other Setup menu.
2. Select ‘ZONE 2’, then press ENTER.
3 Select the Volume Level setting you want.
   - Variable (default) – The Zone 2 volume is adjusted from the receiver.
   - –40 dB Fixed / 0 dB Fixed – The Zone 2 volume level output from the receiver is fixed to the value set here.

4 When you’re finished, press RETURN.
   You will return to the Other Setup menu.

Making network settings using Safari

1 Launch Safari on your computer.
2 Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address “http://(the receiver’s IP address)” from Safari.

3 On the AVNavigator menu screen, select Network Setup.

4 Click IP, Proxy Setting.

5 Setup the network settings manually and then press Apply.

Note
This setting for the network has been confirmed for OS X v 10.7 and Safari 5.1.

Using Safari to set a friendly name

1 Launch Safari on your computer.
2 Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address “http://(the receiver’s IP address)” from Safari.
3 On the AVNavigator menu screen, select Network Setup.
4 Click Friendly Name.
5 Input a friendly name, then press Apply.

Note
This setting for the network has been confirmed for OS X v 10.7 and Safari 5.1.
Using Safari to update the firmware

1. Launch Safari on your computer.
2. Press Bookmark icon. Click Bonjour list (a), and then select this receiver’s name (Friendly Name) (b) in Bookmark.
   If Bonjour list is not displayed, access the IP address “http://(the receiver’s IP address)” from Safari.
3. On the AVNavigator menu screen, select Network Setup.
4. Click Firmware Update.

5. Press Start.
   The firmware update prepare screen is displayed. If the screen does not switch automatically, click Click here.

6. Browse the latest firmware on your computer (a) and then press Upload (b).
   Firmware files have the extension “fw”. Select a file with the extension “fw”.
   The confirmation screen is displayed. If you continue the firmware update, press OK. Once the firmware update process starts, you cannot stop it. Wait until the file is uploaded (about one minute may be required depending on your LAN connection environment).

7. The firmware upload status screen is displayed.
   “The upload process finished successfully.” will be shown when the update is completed.
   Once updating is completed, the receiver’s power automatically turns off.

Note
This setting for the network has been confirmed for OS X v 10.7 and Safari 5.1.

**Troubleshooting**

Incorrect operations are often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest Pioneer authorized independent service company to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.
- If the problem is not solved after the troubleshooting below, if the screen freezes unexpectedly or if the buttons on the remote control or front panel stop working completely, do the following:
  - Press and hold the STANDBY/ON button on the front panel for at least five seconds. (The power turns on, then turns off after five seconds.)
  - If the power cannot be turned off, press and hold STANDBY/ON on the front panel for over five seconds. The power will turn off. In this case, the various settings made on the receiver may be cleared.

**Power**

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power does not turn on.</td>
<td>Make sure that the power cord is plugged in to an active power outlet. Try disconnecting from the power outlet, then plugging back in.</td>
</tr>
<tr>
<td>Power automatically turns off.</td>
<td>When Auto Power Down is set, the power automatically turns off at the set time (page 114).</td>
</tr>
<tr>
<td>When the power is turned on, the WIRELESS indicator slowly flashes.</td>
<td>After unpacking, turning on the power, and returning to initial factory settings (page 95), the WIRELESS indicator slowly flashes. This is not a malfunction. This receiver is designed to automatically enter WAC mode when turning on the power of this receiver in the initial factory settings state. For details about WAC mode, please refer to page 97. After the network settings (page 55) have been completed, the WIRELESS indicator flashing disappears. When the network is not connected, even though the WIRELESS indicator is blinking, there is no problem using it in this state.</td>
</tr>
<tr>
<td>VSX-90 only: Power cannot be turned off. (ZONE 2 ON is displayed.)</td>
<td>Press the ZONE 2 ON button on the remote control for 1.5 seconds and then press the STANDBY/ON button to turn OFF the power.</td>
</tr>
<tr>
<td>VSX-90 only: Power cannot be turned off. (HDZONE ON is displayed.)</td>
<td>Press the HDZONE button on the remote control for 1.5 seconds and then press the STANDBY/ON button to turn OFF the power.</td>
</tr>
<tr>
<td>The receiver suddenly switches off or the WIRELESS indicator blinks.</td>
<td>Check that there are no loose strands of speaker wire touching the rear panel or another set of wires. If so, re-attach the speaker wires, making sure there are no stray strands. The receiver may have a serious problem. Disconnect from the power and call a Pioneer authorized independent service company.</td>
</tr>
</tbody>
</table>

**Symptom**

**Remedy**

- **Display blinks 12V TRG ERR.**
  - An error has arisen in the 12 V trigger jacks. Reconnect accurately then turn the power back on.

**No sound**

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>

**Troubleshooting**

**Symptom**

**Remedy**

- **AMP OVERHEAT** blinks in the display and the FL OFF indicator flashes and the power turns off.**
  - Allow the unit to cool down in a well-ventilated place before switching back on (see Installing the receiver on page 11).
  - Check whether the cables used to connect the speakers are short-circuited.
  - Wait at least 1 minute, then try turning the power on again.
  - The temperature within the unit has exceeded the allowable value. Lower the volume level.

- **The main power suddenly turns off, and MCACC PRO (VSX-90) / Advanced MCACC (VSX-45) indicator blinks.**
  - The power unit is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

- **The unit does not respond when the buttons are pressed.**
  - Try switching the receiver off, then back on again.
  - Try disconnecting the power cord, then connect again.

- **The receiver suddenly switches off or the FL OFF indicator blinks.**
  - There is a possibility that the power supply circuit of the receiver has failed. Wait at least one minute and then turn ON the power again. If the same symptom appears again after turning ON the power again, stop using the receiver, disconnect the power cable and request repair.

- **AMP ERR** is indicated and the main power turns off. The MCACC PRO (VSX-90) / Advanced MCACC (VSX-45) indicator blinks and the main power does not turn on.
  - The receiver may have a serious problem. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

- **The power does not turn on.**
  - Make sure that the power cord is plugged in to an active power outlet. Try disconnecting from the power outlet, then plugging back in.

- **Power automatically turns off.**
  - When Auto Power Down is set, the power automatically turns off at the set time (page 114).

- **When the power is turned on, the WIRELESS indicator slowly flashes.**
  - After unpacking, turning on the power, and returning to initial factory settings (page 95), the WIRELESS indicator slowly flashes. This is not a malfunction.

- **The receiver suddenly switches off or the FL OFF indicator blinks.**
  - There is a possibility that the power supply circuit of the receiver has failed. Wait at least one minute and then turn ON the power again. If the same symptom appears again after turning ON the power again, stop using the receiver, disconnect the power cable and request repair.

- **AMP OVERHEAT** blinks in the display and the FL OFF indicator flashes and the power turns off.**
  - Allow the unit to cool down in a well-ventilated place before switching back on (see Installing the receiver on page 11).
  - Check whether the cables used to connect the speakers are short-circuited.
  - Wait at least 1 minute, then try turning the power on again.
  - The temperature within the unit has exceeded the allowable value. Lower the volume level.

- **The main power suddenly turns off, and MCACC PRO (VSX-90) / Advanced MCACC (VSX-45) indicator blinks.**
  - The power unit is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

- **The unit does not respond when the buttons are pressed.**
  - Try switching the receiver off, then back on again.
  - Try disconnecting the power cord, then connect again.

- **The receiver suddenly switches off or the FL OFF indicator blinks.**
  - There is a possibility that the power supply circuit of the receiver has failed. Wait at least one minute and then turn ON the power again. If the same symptom appears again after turning ON the power again, stop using the receiver, disconnect the power cable and request repair.

- **AMP ERR** is indicated and the main power turns off. The MCACC PRO (VSX-90) / Advanced MCACC (VSX-45) indicator blinks and the main power does not turn on.
  - The receiver may have a serious problem. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

- **The power does not turn on.**
  - Make sure that the power cord is plugged in to an active power outlet. Try disconnecting from the power outlet, then plugging back in.

- **Power automatically turns off.**
  - When Auto Power Down is set, the power automatically turns off at the set time (page 114).

- **When the power is turned on, the WIRELESS indicator slowly flashes.**
  - After unpacking, turning on the power, and returning to initial factory settings (page 95), the WIRELESS indicator slowly flashes. This is not a malfunction.

- **The receiver suddenly switches off or the FL OFF indicator blinks.**
  - There is a possibility that the power supply circuit of the receiver has failed. Wait at least one minute and then turn ON the power again. If the same symptom appears again after turning ON the power again, stop using the receiver, disconnect the power cable and request repair.

- **AMP OVERHEAT** blinks in the display and the FL OFF indicator flashes and the power turns off.**
  - Allow the unit to cool down in a well-ventilated place before switching back on (see Installing the receiver on page 11).
  - Check whether the cables used to connect the speakers are short-circuited.
  - Wait at least 1 minute, then try turning the power on again.
  - The temperature within the unit has exceeded the allowable value. Lower the volume level.

- **The main power suddenly turns off, and MCACC PRO (VSX-90) / Advanced MCACC (VSX-45) indicator blinks.**
  - The power unit is damaged. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

- **The unit does not respond when the buttons are pressed.**
  - Try switching the receiver off, then back on again.
  - Try disconnecting the power cord, then connect again.

- **The receiver suddenly switches off or the FL OFF indicator blinks.**
  - There is a possibility that the power supply circuit of the receiver has failed. Wait at least one minute and then turn ON the power again. If the same symptom appears again after turning ON the power again, stop using the receiver, disconnect the power cable and request repair.

- **AMP ERR** is indicated and the main power turns off. The MCACC PRO (VSX-90) / Advanced MCACC (VSX-45) indicator blinks and the main power does not turn on. **
  - The receiver may have a serious problem. Do not try switching the receiver on. Unplug the receiver from the wall and call a Pioneer authorized independent service company.

- **The power does not turn on.**
  - Make sure that the power cord is plugged in to an active power outlet. Try disconnecting from the power outlet, then plugging back in.
Symptom | Remedy
--- | ---
No sound is output when an input function is selected. | Turn the volume up to approx. +30 dB.
Check that the speaker selector setting is set to OFF (page 91).
Make sure that the digital input is assigned correctly for the input jack the component is back speakers.
Check that the surround back speakers are set to LARGE or SMALL, and the surround speakers are not set to NO (see Speaker Setting on page 111).
Check the speaker connections (see Connecting the speakers on page 24).
Check that the surround back speakers are not set to YES (see Speaker Setting on page 111).
Check the speaker connections (see Connecting the speakers on page 24).
Check the surround back speakers are set to LARGE or SMALL, and the surround speakers are not set to NO (see Speaker Setting on page 111).
Check the speaker connections (see Connecting the speakers on page 24).
Check that the surround back speakers are set to LARGE or SMALL, and the surround speakers are not set to NO (see Speaker Setting on page 111).
Check the speaker connections (see Connecting the speakers on page 24).
Check that the front wide speakers are set to LARGE or SMALL, and the surround speakers are not set to NO (see Speaker Setting on page 111).
Check that the front wide speakers are connected properly (see Connecting the speakers on page 24).
Check that the subwoofer is connected properly, switched on and the volume turned up.
If your subwoofer has a sleep function, make sure it is switched off.
Make sure that the Subwoofer setting is YES or PLUS (see Speaker Setting on page 111).
The crossover frequency may be set too low; try setting it higher to match the characteristics of your other speakers (see Speaker Setting on page 111).
If there is very little low frequency information in the source material, change your setting to Front, SMALL. Subwoofer: YES, or Front, LARGE / Subwoofer: PLUS (see Speaker Setting on page 111).
Check that the LFE channel is not set to OFF, or a very quiet setting (see Selecting the Audio options on page 89).
Check the speaker level settings (see Channel Level on page 119).
No sound from one speaker. | Check the speaker connection (see Connecting the speakers on page 24).
Check the speaker level settings (see Channel Level on page 119).
Check that the channel may not be recorded in the source. By using one of the advanced effect listening modes, you may be able to create the missing channel (see Enjoying various types of playback using the listening modes on page 79).
No digital sound is output. | Make sure that the digital input is assigned correctly for the input jack the component is connected to (see The Input Setup menu on page 67).
Check the digital output settings on the source component.

Other audio problems

Symptom | Remedy
--- | ---
Broadcast stations cannot be selected automatically, or there is considerable noise in radio broadcasts. | Fully extend the FM wire antenna, adjust the position for best reception and secure to a wall, etc.
Use an outdoor antenna for better reception (see pages 26, 48).
Adjust the position and direction of the AM antenna.
Noise may be caused by interference from other equipment, such as a fluorescent light, motor, etc. Switch off or move the other equipment, or move the AM antenna.
Subwoofer output is very low. | To route more signal to the subwoofer, set it to PLUS or set the front speakers to SMALL (see Speaker Setting on page 111).
Everything seems to be set up correctly, but the playback sound is odd. | The speakers may be out of phase. Check that the positive/negative speaker terminals on the receiver are matched with the corresponding terminals on the speakers (see Connecting the speakers on page 94).
The Phase Control feature doesn’t seem to have an audible effect. | If applicable, check that the lowpass filter switch on your subwoofer is off, or the lowpass cutoff is set to the highest frequency setting. If there is a PHASE setting on your subwoofer, set it to 0° (or depending on the subwoofer, the setting where you think it has the best overall effect on the sound).
Make sure the speaker distance setting is correct for all speakers (see Speaker Distance on page 116).
Can’t select some Input functions by the INPUT SELECTOR on the front panel or the ALL button on the remote control. | Check the Input Skip settings in the Input Setup menu (see The Input Setup menu on page 68).
Check the HDMI Input assignment in the Input Setup menu then try OFF (see The Input Setup menu on page 68).
There seems to be a time lag between the speakers and the output of the subwoofer. | See Subwoofers automatically conducting optimum sound tuning (Full Auto MCACC) on page 56.
Set up your system again using MCACC (this will automatically compensate for a delay in the subwoofer output).
The maximum volume available (shown in the front panel display) is lower than the +12dB maximum. | Check that the Volume Limit is set to OFF (see Volume Setup on page 115).
The channel level setting may be over 0.0dB.
Certain listening modes or HOME MENU items cannot be selected. | Some functions cannot be selected, depending on the input signal and listening mode.
The volume level drops automatically. | The temperature within the unit has exceeded the allowable value. Try moving the unit for better ventilation (see Installing the receiver on page 11).
Volume seems different when input is switched. | Set the Channel Level setting to ALL, then adjust the volume of the respective input sources (see Input Volume Adjustment on page 69).
### BT AUDIO

**Symptom**
The Bluetooth wireless technology device cannot be connected or operated. Sound from the Bluetooth wireless technology device is not emitted or the sound is interrupted.

**Remedy**
- Check that no object that emits electromagnetic waves in the 2.4 GHz band (microwave oven, wireless LAN device or Bluetooth wireless technology apparatus) is near the unit. If such an object is near the unit, set the unit far from it. Or, stop using the object emitting the electromagnetic waves.
- Set the Bluetooth wireless technology device and the unit so that the distance between them is less than about 10 m and no obstructions exist between them.
- Check the pairing setting is correct. The pairing setting was deleted from this unit or the Bluetooth technology device. Reset the pairing.
- Check that the profile is correct. Use a Bluetooth wireless technology device that supports A2DP profile and AVRCP profile.

### Video

**Symptom**
No image is output when an input is selected.

**Remedy**
- Check the video connections of the source component.
- Make sure the input assignment is correct for components connected using component video or HDMI cables (see the Input Setup menu on page 62).
- Check the video output settings of the source component.
- Check that the video input you selected on your TV is correct.

**Symptom**
Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Reconnect the source and display device using the same type of connection (component or composite), then start playback again.

### FAQ

#### Settings

**Symptom**
The Auto MCACC Setup continually shows an error.

**Remedy**
- The ambient noise level may be too high. Keep the noise level in the room as low as possible (see also Problems when using the Auto MCACC Setup on page 90). If the noise level cannot be kept low enough, you will have to set up the surround sound manually (page 110).
- When using only one surround back speaker, connect it to the SURROUND BACK L (Single) terminals.
- To use a 5.1-channel speaker set, turn on the surround back speakers for the surround channel, not the surround back channel.
- Make sure there are no obstacles between the speakers and the microphone.
- Check that pairing is correct. The pairing setting was deleted from this unit or the Bluetooth wireless technology device. Reset the pairing.

**Symptom**
Can’t adjust the Fine Speaker Distance setting properly.

**Remedy**
- Check that the speakers are all in phase (make sure the positive (+) and negative (−) terminals are matched up properly).
- With the receiver in standby, press STANDBY/ON for about 5 seconds while holding down SPEAKERS to disable the key lock.
- The power cord was disconnected from the wall while adjusting this setting.
- Settings are only stored if all the zones are turned off. Turn off all the zones before unplugging the power cord.
- Do not pull out the power cord while conducting the settings. (The settings will be stored when both the main zone and sub zone turn off. Turn off all the zones before unplugging the power cord).
- The effect becomes less when the set frequency value of the crossover frequency is low. When setting a high frequency value, the subwoofer EQ effect becomes stronger. However, setting a higher crossover frequency increases the share that the subwoofer bears for low-frequency playback. For that reason, it is disadvantageous in terms of the phase point of view. Set to your preference.

#### FAQ

**Symptom**
Video parameters cannot be used.

**Remedy**
- For audio only input (TUNER, CD, and TV), the video parameter function cannot be used. Use for video input or with a GUI display.
### Professional Calibration EQ graphical output

**Symptom**
The reverb characteristics graph after EQ calibration does not appear entirely flat.

**Remedy**
There are cases where the graph does not appear flat (even when selecting ALL CH ADJ in the Auto MCACC Setup) due to adjustments made to compensate for room characteristics to achieve optimal sound.

Areas of the graph may appear identical (before and after) when there is little or no adjustment needed.

The graph may appear to have shifted vertically when comparing before and after measurements.

**EQ adjustments made using the Manual MCACC setup do not appear to change the reverb characteristics graph after EQ calibration.**

Despite level adjustments being made, the filters used for analysis may not display these adjustments in the reverb characteristics graph after EQ calibration. However, these adjustments are taken into account by the filters dedicated to overall system calibration.

**Lower frequency response curves do not seem to have been calibrated for SMALL speakers.**

Low frequencies used in bass management (the subwoofer channel) will not change for speakers that have been specified as SMALL in the configuration, or do not output these frequencies.

Calibration is performed, but due to your speakers’ low frequency limitations, no measurable sound is output for display.

### Display

**Symptom**
The display is dark or off.

**Remedy**
Press DIMMER repeatedly to select a different brightness.

The OSD screen is not displayed.

**Remedy**
The on-screen display is not displayed unless this receiver’s HDMI OUT terminal is connected to the TV by HDMI cable. If the TV does not support HDMI, watch this receiver’s front panel display when performing operations and making settings.

When the input is a 3D signal, OSD cannot be displayed.

Even through the input is switched, DIGITAL does not light.

**Remedy**
Check the digital connections and make sure that the digital inputs are assigned correctly (see The Input Setup menu on page 60).

When playing Dolby Digital or DTS sources, the receiver’s format indicators do not light.

**Remedy**
Check that the player isn’t set up so that Dolby Digital and DTS sources are converted to PCM.

Ensure that if there are several audio tracks on the disc, the Dolby Digital or DTS is selected.

### Remote control

**Symptom**
Cannot be remote controlled.

**Remedy**
Set the remote control unit’s remote control mode so that it matches the setting on the main unit (see Operating multiple receivers on page 92).

Check whether the receiver’s remote control mode is properly set (see Remote Control Mode Setup on page 114).

Try replacing the batteries in the remote control (see Loading the batteries on page 11).

Be sure to operate within 7 m (23 ft.) and a 30º angle of the remote sensor on the front panel (see Operating range of remote control unit on page 11).

Check that there are no obstacles between the receiver and the remote control.

Make sure that there is no fluorescent or other strong light shining on to the remote sensor.

**VSX-90 only:** Other components can’t be operated with the system remote.

If the battery ran down, the preset codes may have been cleared. Re-enter the preset codes.

The preset code may be incorrect. Redo the procedure for entering preset codes.

When commands from the remote control units of other devices are registered using the learning function, in some cases they may not be learned properly. In this case, register the commands again using the learning function (see page 98). If they still do not work, they may be in a special format that cannot be registered on this receiver’s remote control. Operate the device using another remote control.
### HDMI

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The HDMI indicator blinks continuously.</td>
<td>Check all the points below.</td>
</tr>
<tr>
<td>Video/audio is not output or is interrupted.</td>
<td>This receiver is HDCP-compatible. Check that the components you are connecting are also HDCP-compatible. If they are not, please connect them using the component or composite video jacks. Depending on the connected source component, it’s possible that it will not work with this receiver (even if it is HDCP-compatible). In this case, connect using the component or composite video jacks between source and receiver. If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support. If video images do not appear on your TV, try adjusting the resolution, Deep Color or other setting for your component. While analog video signals are being output over HDMI, use a separate connection for audio output. To output signals in Deep Color, use an HDMI cable (High Speed HDMI™ Cable) to connect this receiver to a component or TV with the Deep Color feature.</td>
</tr>
<tr>
<td>No picture.</td>
<td>Influence from a TV whose power is set to standby may cause the picture or sound output to not be produced or to get cut off. In this case, press OUT P., and make sure to use an output other than the HDMI output to which that TV is connected.</td>
</tr>
<tr>
<td>No sound, or sound suddenly ceases.</td>
<td>Try changing the SCAL setting in the HOME MENU as well as the on-screen display are not displayed for HDMI OUT 1 or HDMI OUT 2. Try changing the SCAL setting (See Setting the Audio options on page 89)). VSX-90 only: To use the HDMI OUT 2 terminal in the main zone, set the MAIN/HDZONE Output Setting to MAIN (page 115). Check that the HDMI Audio setting is set to AMP (Setting the Audio options on page 89)). If the component is a DVI device, use a separate connection for the audio. If analog video is being output over HDMI, please use a separate connection for the audio. Check the audio output settings of the source component. HDMI format digital audio transmissions require a longer time to be recognized. Due to this, interruption in the audio may occur when switching between audio formats or beginning playback. Turning on/off the device connected to this unit’s HDMI OUT terminal during playback, or disconnecting/connecting the HDMI cable during playback, may cause noise or interrupted audio.</td>
</tr>
<tr>
<td>Noisy or distorted picture.</td>
<td>Sometimes a video deck may output a noisy video signal (during scanning, for example), or the video quality may just be poor (with some video game units, for example). The picture quality may also depend on the settings, etc. of your display device. Switch off the video converter and reconnect the source and display device using the same type of connection (component or composite), then start playback again. If the problem still persists when connecting your HDMI component directly to your monitor, please consult the component or monitor manual or contact the manufacturer for support.</td>
</tr>

### Symptom

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Synchronized operation not possible using Control with HDMI function.</td>
<td>Check the HDMI connections. The cable may be damaged. Select ON for the Control Mode with HDMI setting (see HDMI Setup on page 86). The TV’s power on before turning on this receiver’s power. Set the TV side Control with HDMI setting to on (see TV’s operating instructions). VSX-90 only: Connect the TV to the HDMI OUT 1 terminal and set the HDMI output to OUT 1. Then turn on first the TV’s power, then this receiver’s power. VSX-90 only: When HDZONE is set to ON, the video resolution and number of audio channels for the main zone side changes. This is due to the HDMI connection specifications; it is not a malfunction. When playing the same input in the main zone and HDZONE, video and audio signals that can be output in common for all the devices connected to the HDMI OUT 1 and HDMI OUT 2 (HDZONE) terminals are set. VSX-90 only: HDZONE cannot be turned on. This is because the HDMI devices need to recognize each other again. This is not a malfunction. If the picture is disturbed or not displayed, turn off the power of the devices in all the zones, then try again. Also try temporarily turning the Network Standby and Standby Through settings OFF. VSX-90 only: Such menus as the HOME MENU as well as the on-screen display are not displayed for HDMI OUT 1 or HDMI OUT 2. Press OUT P., and switch the HDMI OUT 1/2 setting.</td>
</tr>

</tr>
<tr>
<td>The receiver or computer is not connected to the LAN.</td>
<td>Connect a LAN cable to the receiver or computer (pages 36, 49).</td>
<td></td>
</tr>
<tr>
<td>The router’s power is off.</td>
<td>Turn the router’s power on.</td>
<td></td>
</tr>
<tr>
<td>Network connections could be restricted due to the computer’s network settings, security settings, etc.</td>
<td>Check the computer’s network settings, security settings, etc.</td>
<td></td>
</tr>
</tbody>
</table>

In the middle of Wiring Navi, you are instructed to turn off the power of the unit and then connect other equipment or speakers.

This is to avoid failure of the receiver due to a short-circuit between cables or from static electricity.

Per the Wiring Navi instructions, turn OFF the power of the receiver. As long as the browser has not quit, Wiring Navi resumes guidance upon turning ON the receiver.

When the Wiring Navi or Interactive Operation Guide (YSA-98 only) is launched, a warning about security protection appears on the browser.

This is because of the browser’s security function.

This is not a problem. Perform the operation to authorize the blocked contents.

AVNavigator screen is not displayed on the browser.

This receiver’s IP address has not been entered into the browser correctly.

Check the receiver’s IP address and enter it correctly in the browser (page 59).

Receiver settings cannot be made from a browser.

JavaScript is disabled on the internet browser.

Enable JavaScript.

The browser is not compatible with JavaScript.

Use an internet browser that is compatible with JavaScript.

USB interface

<tr>
<td>VSB-90: When DMR mode or AirPlay is used from a computer, smartphone, etc., the sound is played in subzone.</td>
<td>Play ZONE Setup is not set to MAIN (page 61).</td>
<td>Change Play ZONE Setup to MAIN (page 61).</td>
</tr>
</tbody>
</table>
## Wireless LAN

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Causes</th>
<th>Remedies</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network cannot be accessed via wireless LAN.</td>
<td>SSID uses double-byte characters such as in the Japanese language.</td>
<td>This receiver is compatible only with single-byte alphanumeric characters and some symbols such as the underbar. If characters other than these are used, change the SSID before executing network settings. Refer to the user’s manual for your router for information on SSID.</td>
</tr>
<tr>
<td>There is distance or obstacles between this receiver and equipment including the wireless LAN router.</td>
<td>Improve the wireless LAN environment such as making the distance between this receiver and equipment including wireless LAN router closer.</td>
<td></td>
</tr>
<tr>
<td>There is a microwave oven or other device generating electromagnetic waves near the wireless LAN environment.</td>
<td>Use the system in a place away from microwave ovens or others device generating electromagnetic waves.</td>
<td></td>
</tr>
<tr>
<td>Multiple devices are connected to the wireless LAN router.</td>
<td>When connecting multiple devices to the wireless LAN router, the IP address of the connected devices must be changed.</td>
<td></td>
</tr>
<tr>
<td>The wireless LAN connection settings of this receiver and equipment such as wireless LAN router is not correct.</td>
<td>When wireless LAN connections for this receiver and wireless LAN router are not setup, the connection between this receiver and equipment such as the wireless LAN router must be set.</td>
<td></td>
</tr>
<tr>
<td>The IP address settings of this receiver do not match the settings of the wireless LAN router and the like.</td>
<td>Check the IP address settings (including DHCP settings) of this receiver. If the receiver’s DHCP setting is “ON”, turn the receiver’s power off, then turn the power back on. Check that the IP address for this receiver matches the settings of the wireless LAN router. If the receiver’s DHCP setting is “OFF”, set an IP address matching the network of the base unit (wireless LAN router, etc.). For example, if the wireless LAN router’s IP address is “192.168.1.1”, set the receiver’s IP address to “192.168.1.XXX” (*1), the subnet mask to “255.255.255.0”, the gateway and DNS to “192.168.1.1”. (*1) Set the “XXX” in “192.168.1.XXX” to a number between 2 and 248 that is not assigned to other devices.</td>
<td></td>
</tr>
<tr>
<td>The access point is set to conceal the SSID.</td>
<td>In this case, it may not be shown in the access point list screen. If it is not shown, set the SSID etc. of this receiver.</td>
<td></td>
</tr>
<tr>
<td>The access point’s security settings use WEP 152-bit length code key or shared key authentication.</td>
<td>The receiver does not support WEP 152-bit length code key or shared key authentication.</td>
<td></td>
</tr>
</tbody>
</table>

### Wireless Direct

Wireless Direct is not connected when the main power of this receiver is turned off once and turned on again. The Security Protocol is set to None. Because there are security risks, settings are necessary to connect to Wireless Direct again. Set Security Protocol of Wireless Direct to WEP (page 59).

About Wi-Fi®

The Wi-Fi CERTIFIED Logo is a certification mark of Wi-Fi Alliance.

The Wi-Fi Protected Setup Identifier Mark is a certification mark of Wi-Fi Alliance.

SABRE DAC™

SABRE DAC™ and the logo are trademarks of ESS Technology, Inc.

About HDMI

HDMI (High-Definition Multimedia Interface) is a digital transfer standard for receiving video and audio data with a single cable. It is an adaptation of DVI (Digital Visual Interface), a display connection technology, for use in home audio devices. This interface standard is for next-generation TVs providing High-bandwidth Digital Content Protection (HDCP).

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

HTC Connect

HTC, HTC Connect and the HTC Connect logo are trademarks of HTC Corporation.

About iPod

AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later.

USB works with iPhone 6 Plus, iPhone 6, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPhone 3GS, iPod touch (4th through 5th generation) and iPod nano (4th through 7th generation).

“Made for iPod” and “Made for iPhone” mean that an electronic accessory has been designed to connect specifically to iPod or iPhone, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod or iPhone may affect wireless performance.

Apple, AirPlay, iPad, iPhone, iPod, iPod nano, iPod touch, iTunes, Safari, Bonjour, Mac, Mac OS and OS X are trademarks of Apple Inc., registered in the U.S. and other countries.

The AirPlay logo is a trademark of Apple Inc.

App Store is a service mark of Apple Inc.
Windows 8
This product is Windows 8 Compatible.

Windows® and the Windows logo are trademarks of the Microsoft group of companies.

MHL

MHL, the MHL Logo, and Mobile High-Definition Link are trademarks or registered trademarks of MHL, LLC in the United States and other countries.

About Bluetooth wireless technology

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by PIONEER CORPORATION is under license. Other trademarks and trade names are those of their respective owners.

Surround sound formats

Below is a brief description of the main surround sound formats you’ll find on BDs, DVDs, satellite, cable and terrestrial broadcasts, and video cassettes.

Dolby

The Dolby technologies are explained below. See http://www.dolby.com for more detailed information.

In case of VSX-90

Manufactured under license from Dolby Laboratories. Dolby, Dolby Atmos, Dolby Surround, and the double-D symbol are trademarks of Dolby Laboratories.

In case of VSX-45

Manufactured under license from Dolby Laboratories. Dolby, Pro Logic, and the double-D symbol are trademarks of Dolby Laboratories.

DTS

The DTS technologies are explained below. See http://www.dts.com for more detailed information.

For DTS patents, see http://patents.dts.com. Manufactured under license from DTS Licensing Limited. DTS, DTS-HD, the Symbol, & DTS and the Symbol together are registered trademarks, and DTS-HD Master Audio is a trademark of DTS, Inc. © DTS, Inc. All Rights Reserved.

For DTS patents, see http://patents.dts.com. Manufactured under license from DTS Licensing Limited. DTS, DTS-HD, the Symbol, & DTS and the Symbol together are registered trademarks of DTS, Inc. © DTS, Inc. All Rights Reserved.
Auto Surround, ALC and Stream Direct with different input signal formats

The following charts show what you will hear with different input signal formats, depending on the Stream Direct mode (see Using Stream Direct on page 75) you have selected.

### Stereo (2 channel) signal formats

#### In case of VSX-90

<table>
<thead>

Speaker Setting Guide

In order to achieve an even better surround effect, it is important to accurately position the speakers and make their volume and tone characteristics uniform so as to finely focus the multi-channel sound.

The three major elements in positioning the speakers are **distance**, **angle** and **orientation** (the direction in which the speakers are pointing).

**Distance**: The distance of all the speakers should be equal.

**Angle**: The speakers should be horizontally symmetrical.

**Orientation**: The orientation should be horizontally symmetrical.

In most homes, however, it is not possible to achieve this environment. For the distance, on this receiver it is possible to automatically correct the speaker distance electrically to a precision of 1 cm (0.4 inch) using the Full Auto MCACC Setup function (page 61).

**Step 1: Speaker layout and distance adjustment**

Use speaker stands or the like to make sure the speakers are steady, and leave at least 10 cm (4 inches) from the surrounding walls. Position the speakers attentively so that the speakers on the left and right are at equal angles from the listening position (center of the adjustments). (We recommend using cords, etc., when adjusting the layout.) Ideally all the speakers should be equidistant from the listening position.

**Note**

If the speakers cannot be set at equal distances (on a circle), use the Auto MCACC Setup speaker distance correction and Fine Speaker Distance functions to make them equalize the distance artificially.

**Step 2: Adjusting the speaker height**

Adjust the heights (angles) of the different speakers.

Adjust so that the front speaker units reproducing mid- and high frequencies is roughly at the height of the ears. If the center speaker cannot be set at the same height as the front speakers, adjust its angle of elevation to point it to the listening position.

Set surround speaker 1 so that it is not under the height of the ears.

**Step 3: Adjusting the speaker orientation**

If the left and right speakers are not pointing in the same direction, the tone will not be the same on the right and left, and as a result the sound field will not be reproduced properly. However, if all the speakers are pointed towards the listening position, the sound field will seem cramped. Testing by the Pioneer Multi-channel Research Group has shown that a good sense of sound positioning can be achieved by pointing all the speakers towards an area 30 cm (12 inches) to 80 cm (31 inches) behind the listening position (between the surround speakers and the listening position).

However, the sense of sound positioning can differ according to the conditions in the room and the speakers being used. In smaller environments in particular (when the front speakers are close to the listening position), with this method the speakers will be pointed too inward. We suggest you use this example of installation as reference when trying out different installation methods.

**Step 4: Positioning and adjusting the subwoofer**

Placing the subwoofer between the center and front speakers makes even music sources sound more natural (if there is only one subwoofer, it doesn’t matter if it is placed on the left or right side). The low bass sound output from the subwoofer is not directional and there is no need to adjust the height. Normally the subwoofer is placed on the floor. Put it in a position at which it will not cancel out the bass sound output from the other speakers. Also note that placing it near a wall may result in sympathetic vibrations with the building that could excessively amplify the bass sound.

If the subwoofer must be installed near a wall, place it at an angle so that it is not parallel to the wall surface. This can help reduce any sympathetic vibrations, but depending on the shape of the room this could result in standing waves. However, even if standing waves are generated, their influence on the sound quality can be prevented using the Auto MCACC’s standing wave control function (page 106).

**Step 5: Default settings with the Auto MCACC Setup (auto sound field correction) function**

It is more effective to perform the Full Auto MCACC Setup (page 61) procedure once the adjustments described above have been completed.

**Note**

The distance to the subwoofer may be slightly larger than the distance actually measured with a tape measure, etc. This is because this distance is corrected for electric delay, and is not a problem.

**Positional relationship between speakers and monitor**

**Position of front speakers and monitor**

The front speakers should be as equidistant as possible to the monitor.
Position of center speaker and monitor
Since mostly dialogs are output from the center speaker, keeping the center speaker as close as possible to the screen makes the overall sound more natural. For TVs using Braun tubes, however, when installing the center speaker on the floor, adjust its angle of elevation to point it towards the listening position.

- If the center speaker is not of the shielded type, install it away from the TV.
- When installing the center speaker on top of the monitor, place it facing slightly downwards towards the listening position.

Important information regarding the HDMI connection
There are cases where you may not be able to route HDMI signals through this receiver (this depends on the HDMI-equipped component you are connecting—check with the manufacturer for HDMI compatibility information).

If you aren’t receiving HDMI signals properly through this receiver (from your component), please try one of the following configurations when connecting up.

Configuration A
Use component video cables to connect the video output of your HDMI-equipped component to the receiver’s component video input. The receiver can then convert the analog component video signal to a digital HDMI signal for transmission to the display. For this configuration, use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections.

Note
The picture quality will change slightly during conversion.

Configuration B
Connect your HDMI-equipped component directly to the display using an HDMI cable. Then use the most convenient connection (digital is recommended) for sending audio to the receiver. See the operating instructions for more on audio connections. Set the display volume to minimum when using this configuration.

Notes
- If your display only has one HDMI terminal, you can only receive HDMI video from the connected component.
- Depending on the component, audio output may be limited to the number of channels available from the connected display unit (for example audio output is reduced to 2 channels for a monitor with stereo audio limitations).
- If you want to switch the input function, you’ll have to switch functions on both the receiver and your display unit.
- Since the sound is muted on the display when using the HDMI connection, you must adjust the volume on the display every time you switch input functions.

Cleaning the unit
- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleanser diluted five or six times with water, and wrung out well, and then wipe again with a dry cloth. Do not use furniture wax or cleansers.
- Never use thinners, benzene, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.
DTS Digital Surround is a 5.1-channel audio coding system from DTS Inc. now widely used for DVD-Video, DVD-Audio, 5.1 music discs, digital broadcasts, and video games.

Dolby Atmos
Features
- Provides a powerful and dramatically new listening experience for cinema sound.
- Creates a 3 dimensional listening environment where sounds can be transported through the room.
- Reproduces a natural sound that matches the story exactly and sounds as if real.
- Addition of audio elements in the height space above the listener. Height audio is reproduced by either overhead or Dolby enabled speakers.
- The original intention of the producers can be expressed, no matter what kind of system setup you have in your home.

Technical information
- Placement for clearer, more accurate cinema sound is possible. With mixing that uses “objects”, independent sound elements can be superimposed on channel-based material.
- By importing all of the intentions of the director as meta data, it is possible to customize play back for every home.
- Soundtracks are scaled to achieve best performance through your specific speaker system.
- Dolby Atmos uses a multi-layering approach for building soundtracks. In combination with the conventional channel-based method, the base layer is composed of mainly motionless environmental sounds. On top of this layer is the layer that realizes the sound elements that have “movement”. Here, sound can be placed and moved so that it is linked accurately with the images on-screen.
- In the meta data, it is indicated how this type of sound element will act when it is played back. This indication enables playback that reflects the intention of the director as much as possible, in any playback environment. This dual-layer approach not only allows moviemakers to freely make full use of a variety of expressions, but also enables users to experience the intentions of the producer in any type of home theater setup.
- Dolby Atmos contents are required to enjoy Dolby Atmos. For Blu-ray discs with Dolby Atmos, Dolby Atmos can be played by connecting most conventional Blu-ray discs with this receiver using HDMI.

Dolby Digital Plus
Dolby Digital Plus is the audio technology for all high-definition programming and media. It combines the efficiency to meet future broadcast demands with the power and flexibility to realize the full audio potential expected in the upcoming high-definition era.

Dolby TrueHD
Dolby TrueHD is the lossless encoding technology developed for high-definition optical discs in the upcoming era.

Dolby Digital
Dolby Digital is a multichannel digital audio coding system widely used in cinemas, and in the home for DVD and digital broadcast soundtracks.

DTS
DTS Digital Surround is a 5.1-channel audio coding system from DTS Inc. now widely used for DVD-Video, DVD-Audio, 5.1 music discs, digital broadcasts, and video games.

DTS-HD High Resolution Audio
A high definition audio technology by which signals can be transferred over HDMI cables.

DTS-ES
DTS-ES (the ES stands for Extended Surround) is a decoder that is capable of decoding both DTS-ES Discrete 6.1 and DTS-ES Matrix 6.1 encoded sources.

DTS Neo:6
DTS Neo:6 can generate 7.1 channel surround sound from any matrixed stereo source (such as video or TV) and from 5.1 channel sources.

Decoding
A technology for converting digital signals that have been compressed upon recording by a digital signal processing circuit, etc., into the original signals. The term “decoding” (or “matrix decoding”) is also used for the technology which converts 2-channel sound sources into multiple channels or expands 5.1-channel signals into 6.1 or 7.1 channels.

Calibrating the sound field/Improving the sound quality
Phase Control
The Phase Control technology incorporated into this receiver’s design provides coherent sound reproduction through the use of phase matching for an optimal sound image at your listening position.

Phase Control Plus (Auto Phase Control Plus)
Corrects the delay in the contents’ low frequency effects (LFE). When properly corrected, the bass sound is more powerful, improving the balance of the sound.

When AUTO is selected, the contents are analyzed in real time, allowing them to be played in optimal conditions. This is effective for contents with low frequency effects (LFE), such as Dolby Digital 5.1-channel contents.

Virtual Speakers
Virtual playback of a maximum of 11.2 channels combining the actually installed speakers and the virtual speakers is possible. This makes for smoother connection between the sounds and an improved 3D feel.

Virtual Surround Back
When you’re not using surround back speakers, selecting this mode allows you to hear a virtual surround back channel through your surround speakers. You can choose to listen to sources with no surround back channel information.

Virtual Height
Settings to create virtual front height channel audio.

Virtual Wide
When you’re not using front wide speakers, selecting this mode allows you to hear a virtual front wide channel through your front speakers.

Auto Sound Retriever
The Auto Sound Retriever feature employs DSP technology to restore sound pressure and smooth jagged artifacts left over after compression.

With some audio inputs, the Sound Retriever effect is automatically optimized based on the bitrate information of the contents that have been input to achieve high sound quality.

Sound Retriever Air
Sound Retriever Air compensates for reduced sound quality due to compression when sending Bluetooth signals.
ALC (Auto Level Control)
In the Auto level control (ALC) mode, this receiver equalizes playback sound levels. Also, the low and high frequency sounds, dialog, surround effects, etc., that are difficult to hear when the volume is low are adjusted to be optimal for the volume level. This mode is particularly optimum when listening at night.

Front Stage Surround Advance
With the Front Stage Surround Advance feature, you can enjoy seamless, natural surround sound effects using only the front speakers, without deteriorating the quality of the original sound.

MCACC
The Auto MCACC Setup provides a quick but accurate surround sound setup, which includes the advanced features of Professional Acoustic Calibration EQ.

HDMI
Control with HDMI function
Synchronized operations below with a Control with HDMI-compatible Pioneer TV or Blu-ray Disc player are possible when the component is connected to the receiver using an HDMI cable.
- The receiver’s volume can be set and the sound can be muted using the TV’s remote control.
- The receiver’s input switches over automatically when the TV’s input is changed or a Control with HDMI-compatible component is played.
- The receiver’s power is also set to standby, when the TV’s power is set to standby.

ARC (Audio Return Channel)
When a TV supporting the HDMI ARC (Audio Return Channel) function is connected to the receiver, the sound of the TV can be input via the HDMI OUT terminal.

Network function
AirPlay
AirPlay works with iPhone, iPad, and iPod touch with iOS 4.3.3 or later, Mac with OS X Mountain Lion or later, and PC with iTunes 10.2.2 or later. For more information, see the Apple website (http://www.apple.com).

DLNA
The Digital Living Network Alliance (DLNA) is a cross-industry organization of consumer electronics, computing industry and mobile device companies. Digital Living provides consumers with easy sharing of digital media through a wired or wireless network in the home.

vTuner
vTuner is a paid online database service that allows you to listen to radio and TV broadcasts on the Internet. vTuner lists thousands of stations from over 100 different countries around the globe. For more detail about vTuner, visit the following website: http://www.radio-pioneer.com

Additional information

*ALAC* stands for Apple Lossless Audio Codec. This is a lossless type audio codec and is used for example for iTunes®. It compresses non-compressed files (such as WAV and AIFF) to about one half the original size with no loss of sound quality.

FLAC
FLAC (Free Lossless Audio Codec) is an audio format allows lossless codec. Audio is compressed in FLAC without any loss in quality. For more details about FLAC, visit the following website: http://flac.sourceforge.net/

Windows Media
Windows Media is a multimedia framework for media creation and distribution for Microsoft Windows. Windows Media is either a registered trademark or trademark of Microsoft Corporation in the U.S. and/or other countries. Use an application licensed by Microsoft Corporation to author, distribute, or play Windows Media formatted content. Using an application unauthorized by Microsoft Corporation is subject to malfunction.

Router
A device for relaying data flowing on a network to another network. In homes, routers often also function as DHCP servers. Products with built-in wireless LAN access points are called “wireless LAN routers”.

DHCP
Abbreviation of Dynamic Host Configuration Protocol. A protocol for automatically assigning such setting information as IP addresses within network connections. This offers convenience in that, when enabled, it allows network functions to be used simply by connecting the devices to the network.

Wireless LAN/Wi-Fi
“Wi-Fi” (Wireless Fidelity) is a trademark coined by the Wi-Fi Alliance trade association to increase recognition of wireless LAN standards. With the increase in the number of devices connected to computers in recent years, Wi-Fi offers the advantage of eliminating the complexity of making connections with LAN cables by using wireless connection. As a way of reassuring users, products that have passed interoperability tests carry the logo “Wi-Fi Certified” to indicate that compatibility is assured.

WPS
Abbreviation of Wi-Fi Protected Setup. A standard established by the Wi-Fi Alliance industry group for a function allowing settings related to interconnection of WPS-compatible wireless LAN devices and encryption to be made with simple operations. There are a number of methods, including push-button configuration and PIN code configuration. This AV receiver supports both push-button configuration and PIN code configuration.

SSID
Abbreviation of Service Set IDentifier. A wireless LAN access point identifier. Can be set as desired using up to 32 characters of English letters and numbers.
**Bluetooth function**

*Bluetooth wireless technology*
A short-range wireless communications standard for digital devices. Information is exchanged between devices several meters to several tens of meters apart using radio waves. It uses radio waves on the 2.4 GHz band which does not require applications for licenses or usage registration for applications conducting wireless exchange of digital information at relatively low speeds, such as computer mouses and keyboards, mobile phones, smartphones, text and audio information for PDAs, etc.

**Receiver function**

*MHL*
MHL (Mobile High-definition Link) is an interface standard for transmitting digital signals with mobile devices. MHL can carry high quality multi-channel audio data and 3D/Full-HD video formats.

“This receiver incorporates MHL 2.”

Preset code list

VSX-90 only

You should have no problem controlling a component if you find the manufacturer in this list, but please note that there are cases where the codes for the manufacturer in the list will not work for the model that you are using. There are also cases where only certain functions may be controllable after assigning the preset code.

Important

• We do not guarantee the operations of all the manufacturers and devices listed. Operation may not be possible even if a preset code is entered.

If you can’t find a preset code that matches the component you want to control, you can still teach the remote individual commands from another remote control (see Programming signals from other remote controls on page 86).
